

Fusion Themes

Presented by: **Mekhael Medhat**

Content

In this document we will be **discussing**:

- **How to** customize your application **change** its style and layout
- **Ordering** your application views and managing them
- **Part two** : structure intro

Needed roles for this Tutorial:

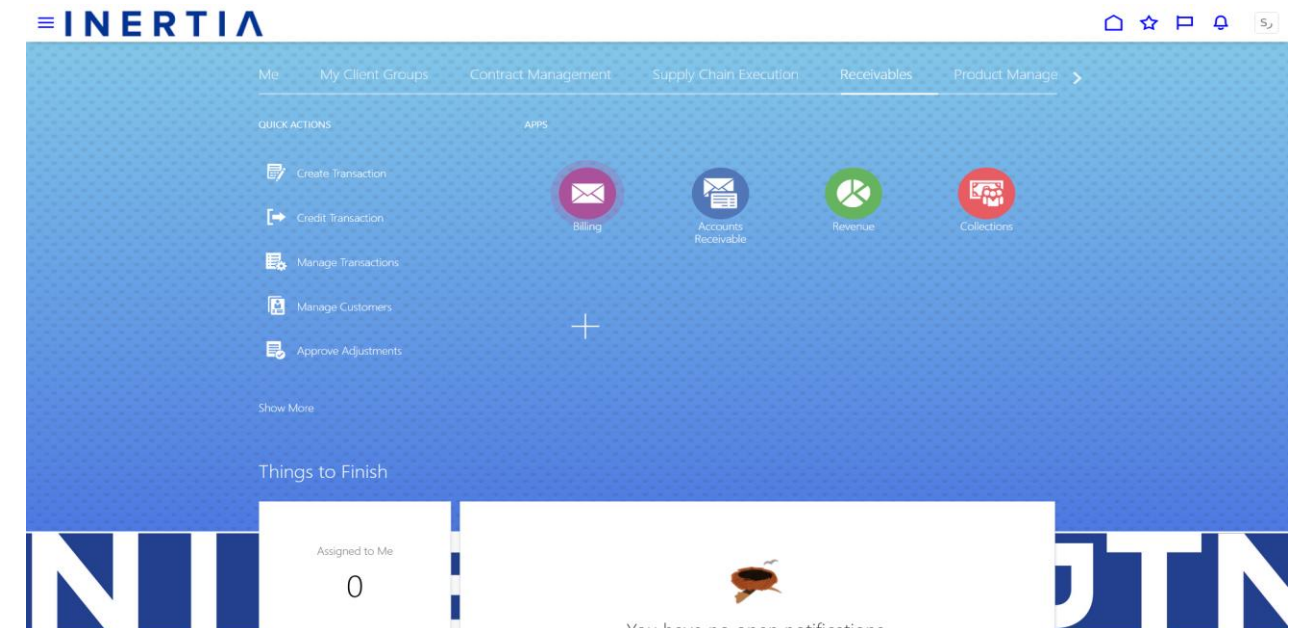

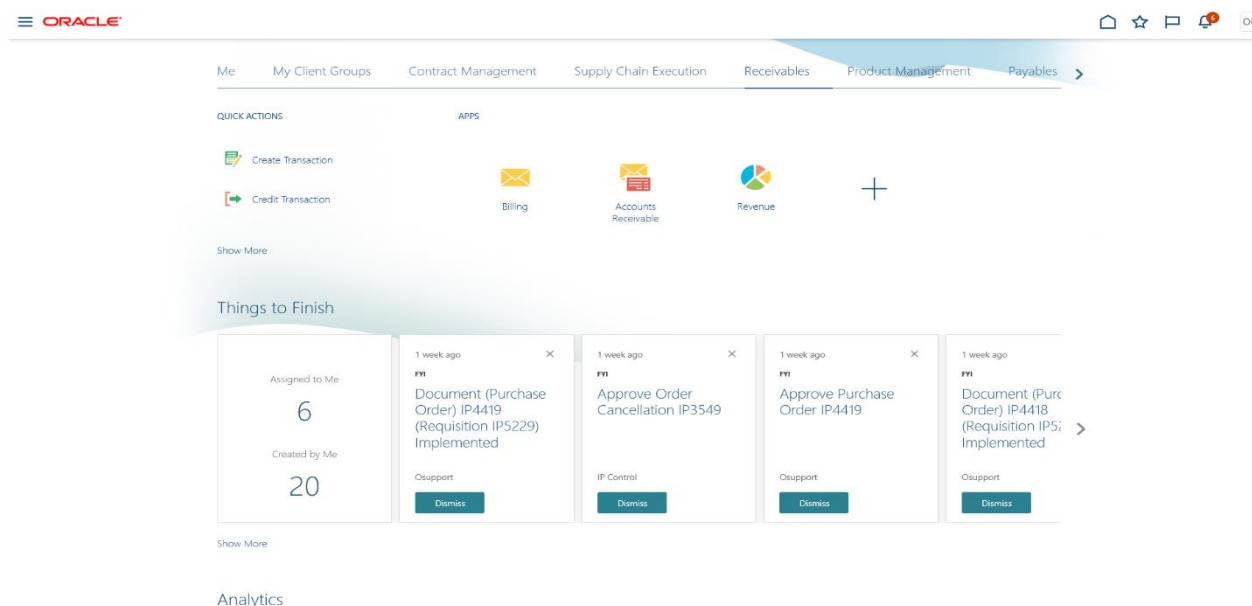

- **Application Implementation administrator**

Here is an example of what we will be doing showing results

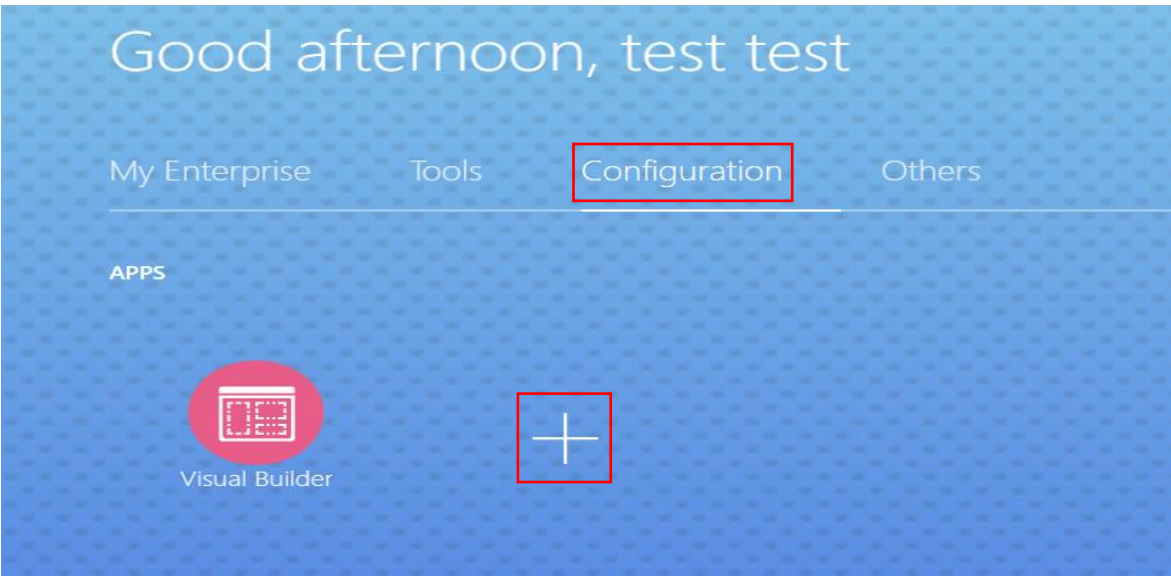

BEFORE

and

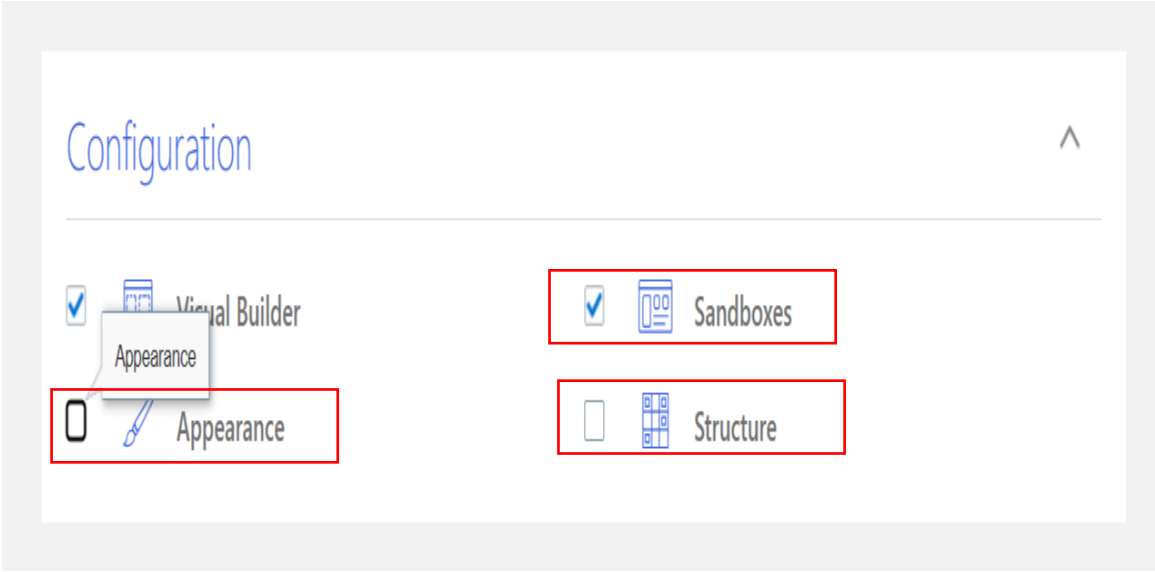

AFTER

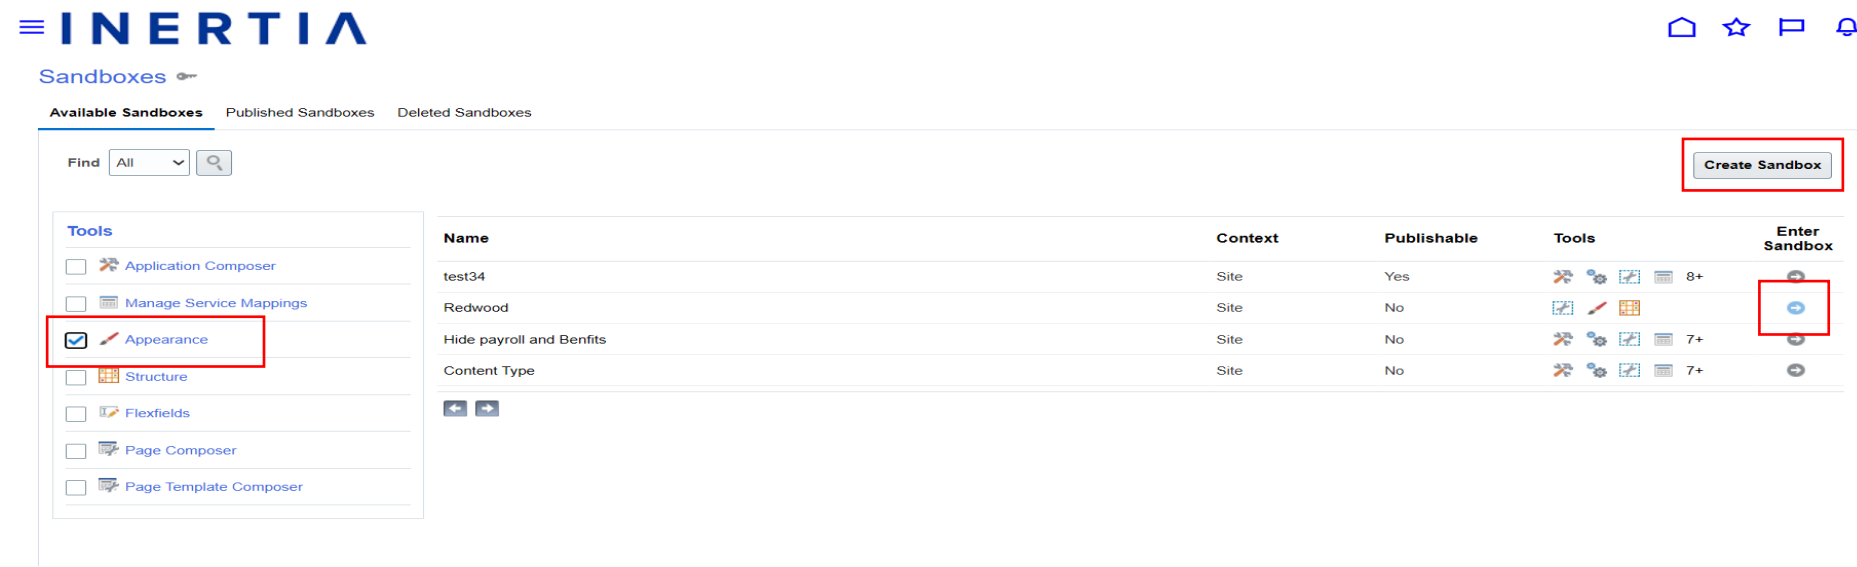

Navigate to **configurations** and press on the + sign to add **Appearance** and **sand boxes**

Enable the features

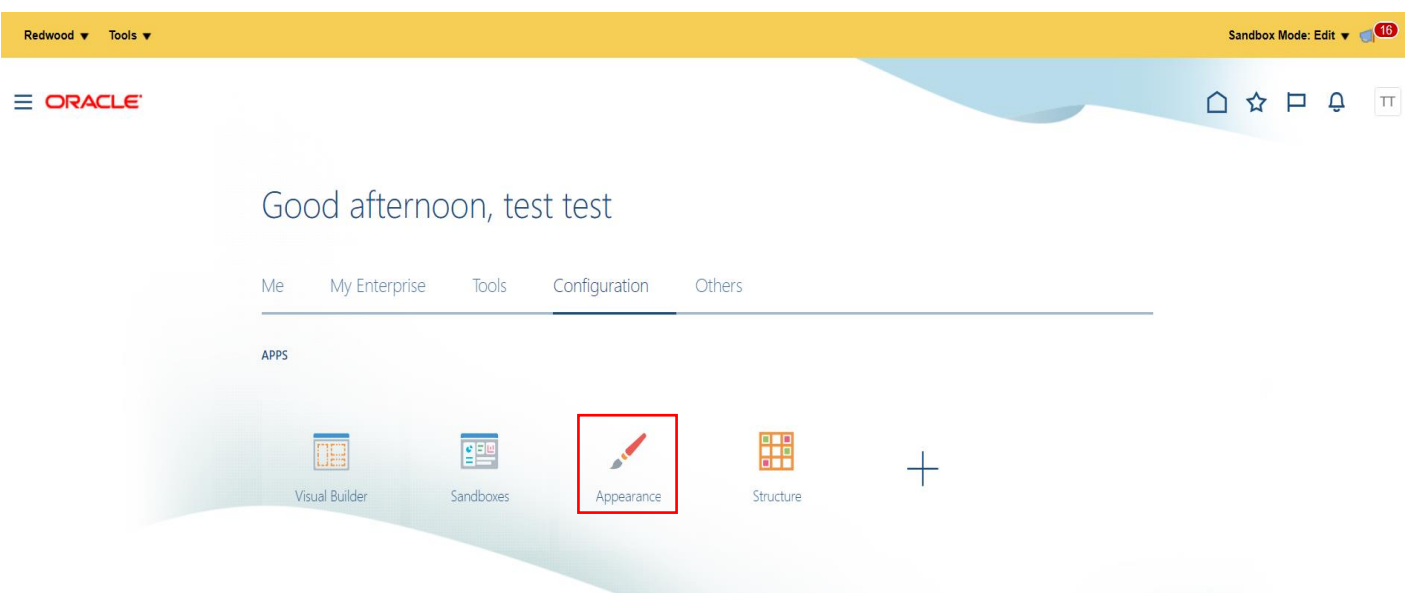

Now you have to open **a sand box** with appearance option allowed... filter choices with it

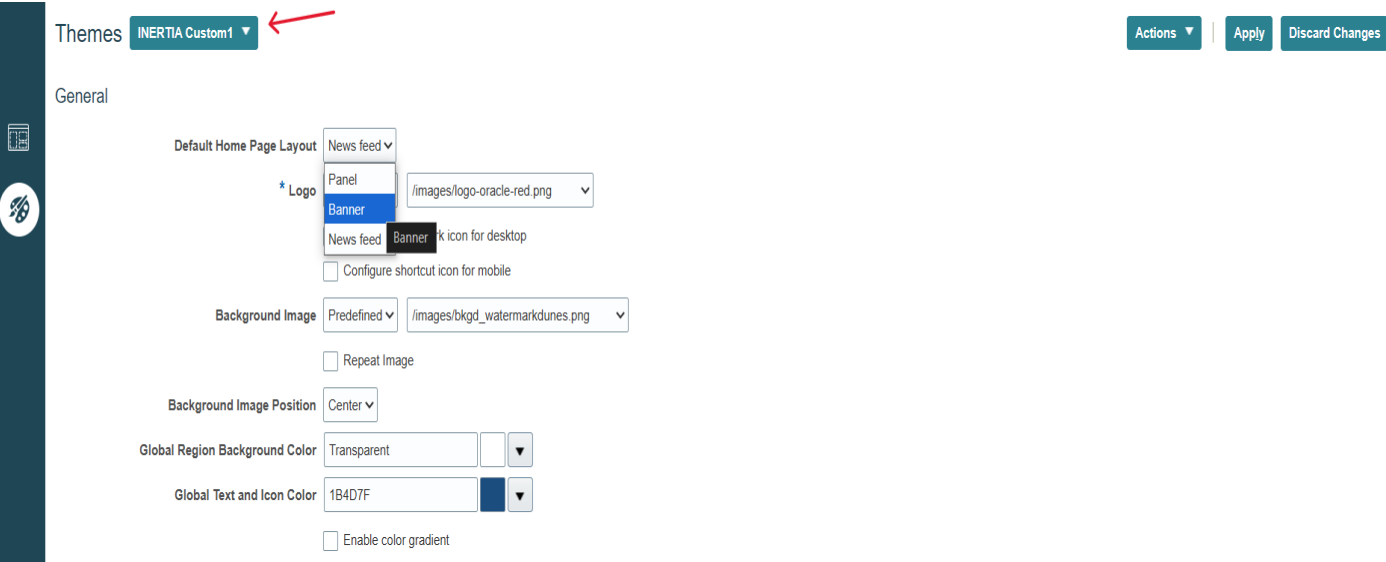

You can either create a **sandbox** and check mark on **appearance** or pick one with **appearance option** to edit it

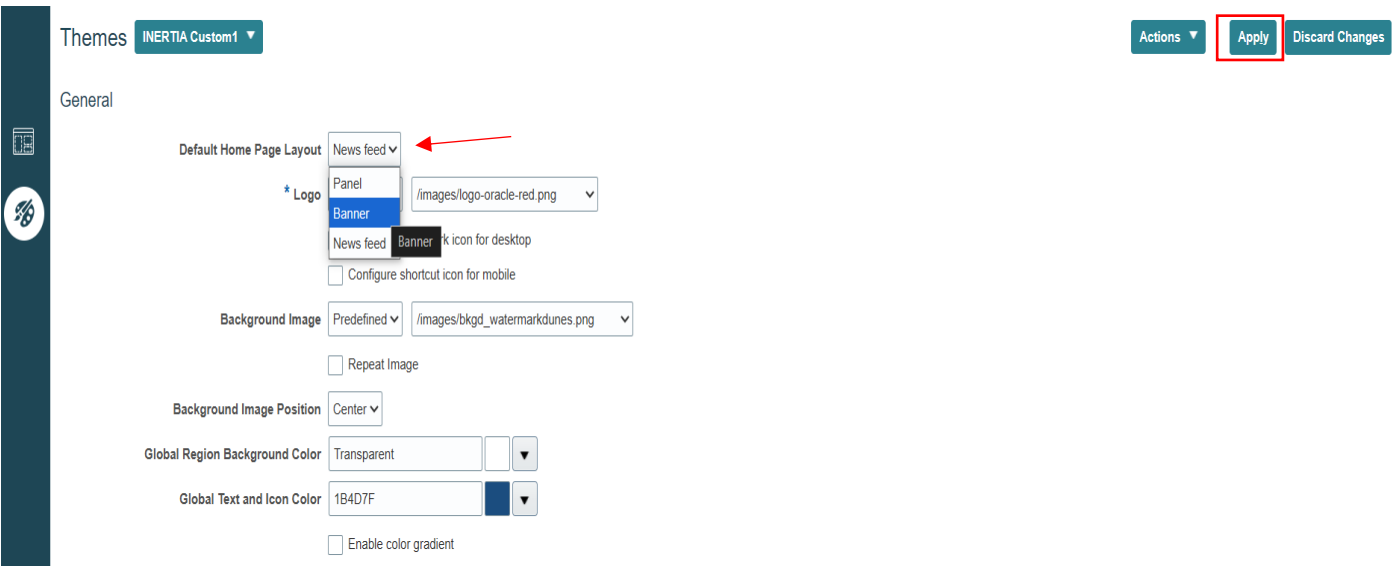

Now the **sandbox** will be opened to edit the appearance

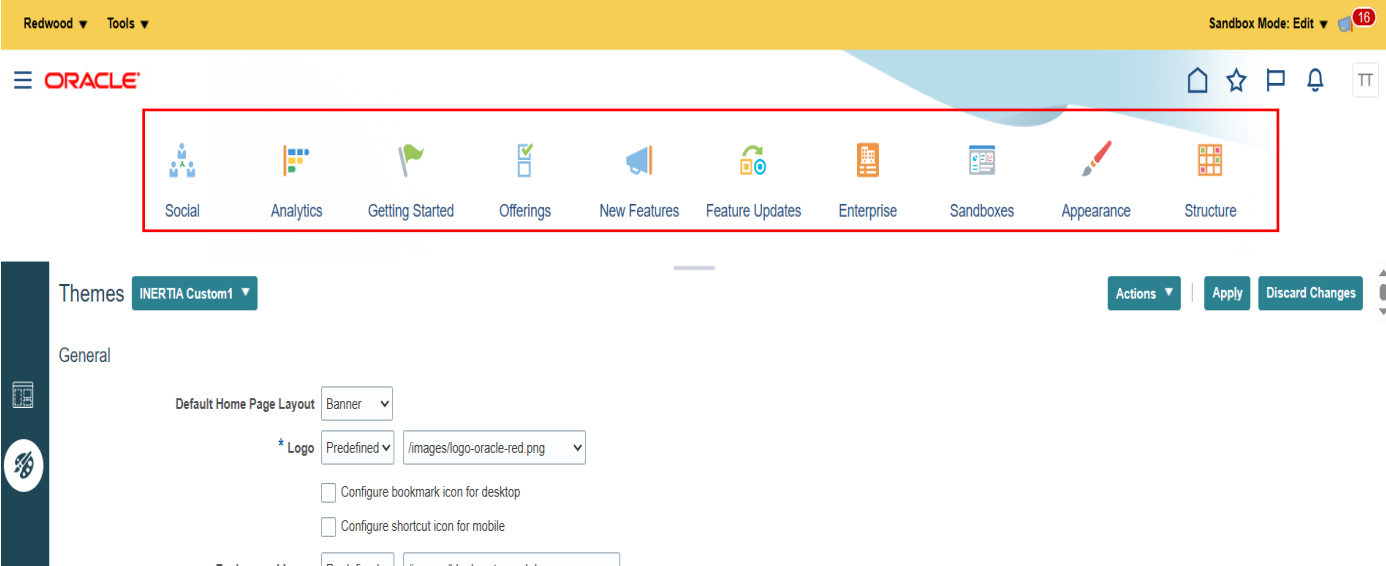

Here you can find some **predefined themes**

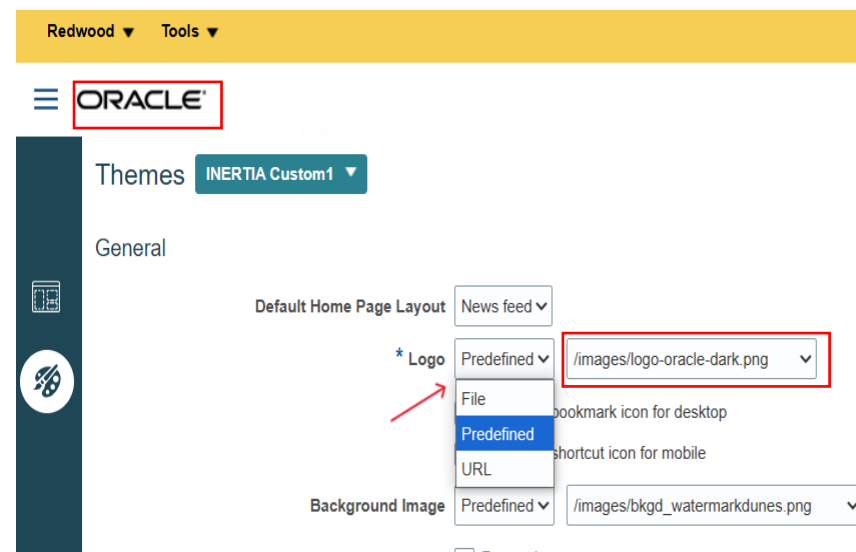

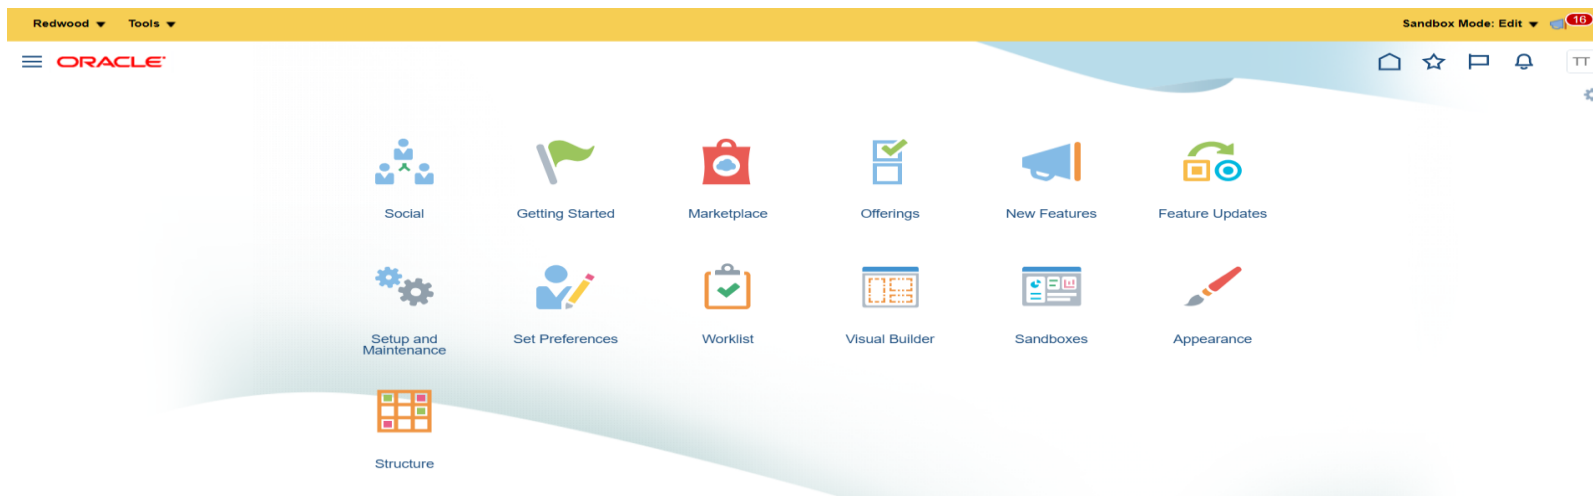

For the home page layout you have **3 options**

The effect upon **applying** banner layout

It added a **panel available** to choose from whenever you are inside A **page**. Definitely will allow **easy navigation** throw the app also, check the **home page layout**.. Everything in one page!

For the logo you can notice you got **3 input methods**

URL : An image link

File : upload an image from your machine

Notice the effect after applying (picked & applied **black** logo rather than **red**)

Moving to **back ground** options you have 3 inputs methods

This time I'll upload a file from my machine

Default Home Page Layout: News feed

* Logo: Predefined (/images/logo-oracle-red.png)

☐ Configure bookmark icon for desktop

☐ Configure shortcut icon for mobile

Background Image: File Choose File No file chosen

☐ Repeat Image

Background Image Position: Center

Global Region Background Color: Transparent

Global Text and Icon Color: 1B4D7F

☐ Enable color gradient

You have also a **region background** color keep in mind, you can un use the color the background will take over.. Here is the **difference!**

Themes: INERTIA Custom1

General

Default Home Page Layout: News feed

* Logo: Predefined (/images/logo-oracle-red.png)

☐ Configure bookmark icon for desktop

☐ Configure shortcut icon for mobile

Background Image: File Blue_Abtract_Full_HD_Wallpaper.jpg Update...

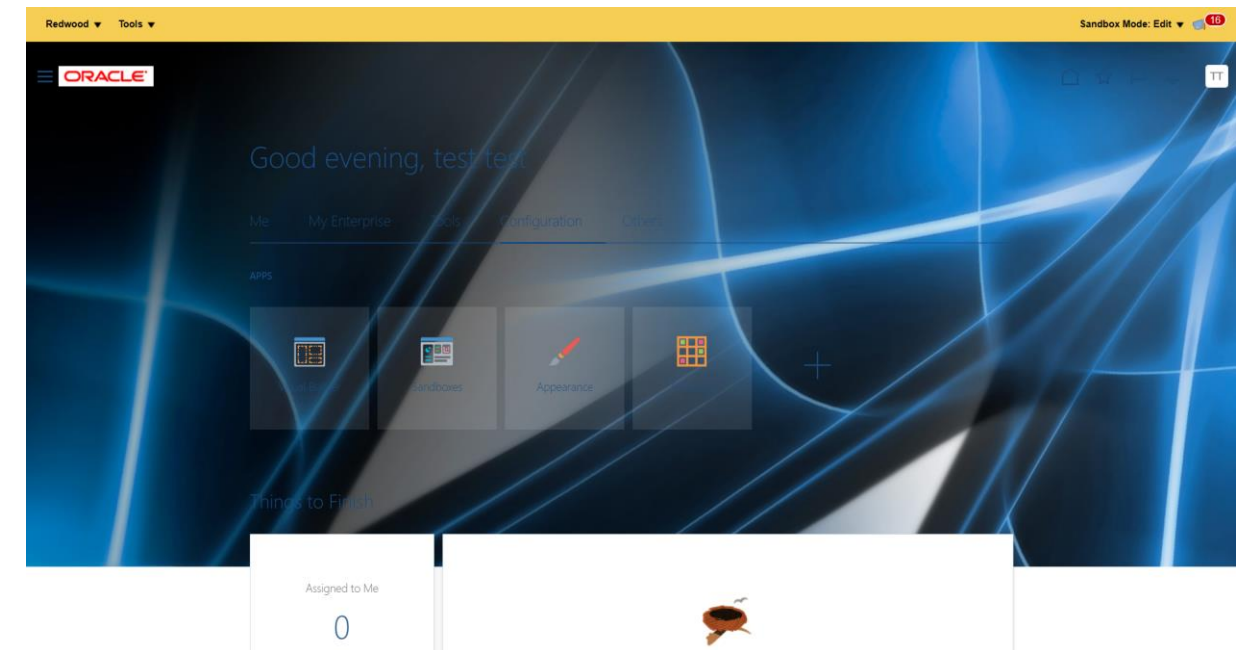

☐ Repeat Image

Background Image Position: Center

Global Region Background Color: Transparent

Global Text and Icon Color: 0000FF

☐ Enable color gradient

Themes: INERTIA Custom1

Actions

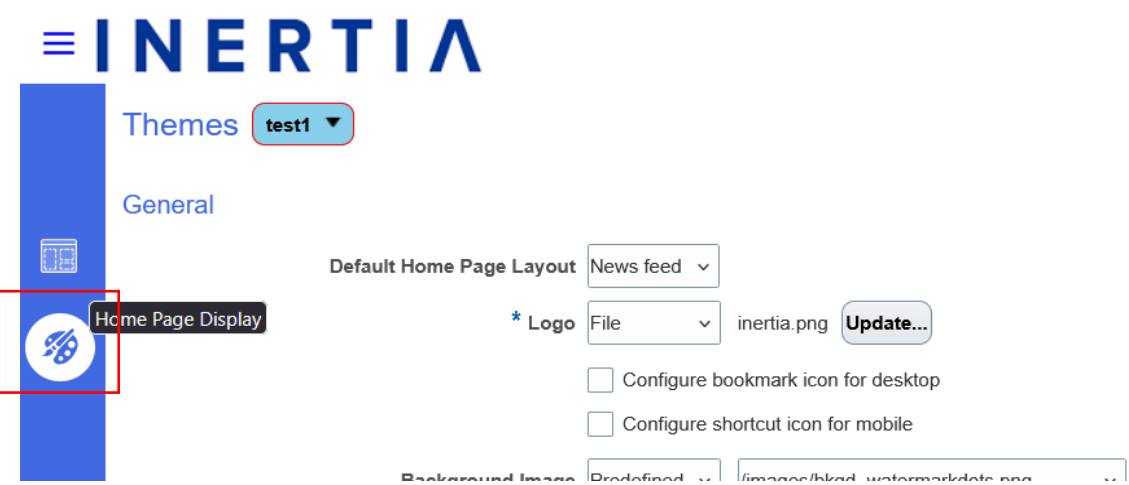

Apply

Discard Changes

Part two

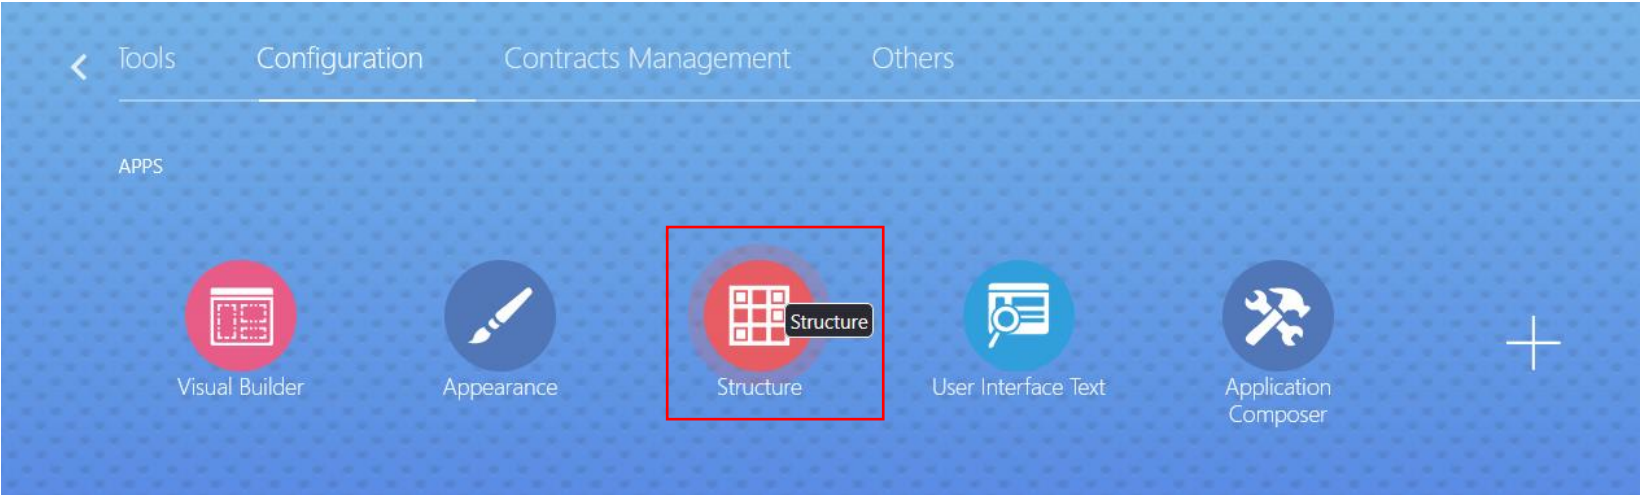

Speaking of **structure** and user navigation
you can **re order** the structure for the home page throw here

use the **arrows** to reorder sections

Name	Visibl	Order
News feed	✓	^ v
Things to Finish	✓	^ v
News and Announcements	✓	^ v

Now to navigate all **the user tabs structure**

From here you can see **all your applications**, **all your groups** you can **re assign taps** locations even creating a **new group** to make it easier for you **user**
here is an example
I will create a **test group** and assign collections to it
