Agenda

- 1 Architecture
- Configuring Rules
- 3 Accounting Hub

Why Accounting Hub? Top Pain Points

- Multiple Transaction Systems: Transaction systems often have no or very limited accounting capabilities (ex: Core banking, Concur, Zuora or a 3rd party payroll)
- Federated Accounting: Accounting function spread across multiple systems resulting in inefficient record to report processes.
- Multiple source of truths: Use of multiple General Ledger systems and need to consolidate into one financial information repository for financial reporting / business insights.
- Less Agile: Requires pervasive changes to the business systems managing finance processes when business grows or expands.
- High Investments: Significant need for IT resources for upgrades and rollouts.

Accounting Hub Cloud

Systems

Key Benefits

- Robust solution based on expertise from 30+ years experience in ERP integration
- Elegant accounting rules engine designed to provide flexibility and simplicity
- Optimized for enterprise-level transaction volumes to suit complex industries and diverse IT environments
- Improves management insight and control by centralizing business information in an easy-to-access Cloud solution
- Supports a smooth transition to a complete, end-to-end cloud ERP – at the pace that suits your business

What's Different in Cloud?

AGILITY

- Easy to implement
 - Spreadsheet based Rapid Implementation
- Flexibility in Accounting Model
 - Enhanced Rules Definition
 - Ease of adding extended depth to sub ledger data through supporting reference

CONTROL

- Complete automation on record to report using integration web services
 - Web service to upload to ERP Cloud
 - Web service to create accounting
- End-User Transparent error handling
 - View and fix error within accounting hub

INSIGHT

- Native Cloud GL reporting tools with drilldown to detailed sub ledger level facts
- End User friendly reporting subject area for management reporting using supporting reference
