Purpose statement

This document identifies the Redwood pages in Oracle Fusion Cloud SCM and Procurement that are controlled by profile options. You can use the profile options to control whether specific Redwood pages are visible in your implementation.

Disclaimer

This document in any form, software or printed matter, contains proprietary information that is the exclusive property of Oracle. Your access to and use of this confidential material is subject to the terms and conditions of your Oracle software license and service agreement, which has been executed and with which you agree to comply. This document and information contained herein may not be disclosed, copied, reproduced or distributed to anyone outside Oracle without prior written consent of Oracle. What Are Redwood Pages?

Redwood is Oracle's next-generation user experience. Redwood brings state-of-the-art, consumer-grade user experiences to the sophisticated enterprise scenarios that Oracle enables. Many of the Oracle SCM and Procurement application pages and task flows have been re-created in Redwood to improve the user experience and, in some cases, to introduce enhanced capabilities, such as improved search. You use profile options to turn those Redwood pages "on" or "off."

> ➢ Not all Redwood pages in SCM and Procurement are controlled by profile options. Some are controlled by opting in to features in the Offerings or Setup and Maintenance work areas. But in many cases, if an existing application page is re-created in Redwood, that page is controlled by a profile option.
>
> Refer to your product's What's New document to find out how to enable each Redwood feature.

Many, though not all, of the Redwood-related profile options are "turned off" by default. You can decide whether, and when, to enable those Redwood pages in your enterprise's implementation. At some point, each Redwood page will be "turned on" by default. The table in the **Profile Options for Redwood Pages** section of this document identifies the profile options that control each Redwood page or task flow, and also the release in which the Redwood page will be enabled by default, if that release has been determined.

ORACLE

Prerequisites

Enable Search-Related Profile Options

Before you enable any Redwood pages in your implementation, you must enable a set of search-related profile options:

Profile Option Code	Profile Display Name	Application	Module	Profile Level	Profile Value
ORA_FND_SEARCH_EXT_ENABLED	Enable/Disable Search Ext Framework	Oracle Middleware Extensions for Applications	Oracle Middleware Extensions for Applications	Site	Yes
FUSION_APPS_SEARCH_ENABLED	Global Search Enabled	Oracle Middleware Extensions for Applications	Oracle Middleware Extensions for Applications	Site	Yes

To enable the profile options, follow these steps:

1. In the Setup and Maintenance work area, search for and select the **Manage Administrator Profile Values** task.

2. Search for and select a profile option from the preceding table.

3. Set the profile level to **Site**.

4. Set the profile value to the profile value in the preceding table.

5. Click **Save**.

6. Repeat for the remaining profile option in the preceding table, and then click **Save and Close**.

ORACLE

Profile Options for Redwood Pages

This table identifies the Redwood pages in Oracle Fusion Cloud SCM and Procurement that are controlled by profile options. Use the table details to enable the Redwood pages that are a good fit for your implementation.

For details about each Redwood page or flow, see the What's New documents for the identified quarterly update.
