AP: DUPLICATE INVOICE CHECK

ORACLE FUSION FINANCIALS

Authored By
CA Uday Yelchuri

Preface

This document explains the new **Enhanced Duplicate Invoice Check** feature for Duplicate Invoice Validation in Accounts Payable.

Oracle Fusion already provides basic duplicate invoice validation by default, which compares invoice numbers to ensure they are unique for the same supplier and site.

When activated, this feature automatically prevents duplicate invoice entries by verifying key attributes, including **Supplier, Invoice Type, Invoice Amount, Currency, and Invoice Date**.

This validation applies to all incoming invoices from the supplier, helping maintain data accuracy and avoid duplicate payments.

Tips and Considerations:

- The feature only checks **standard and prepayment** invoice types.
- It does not use the invoice number alone to identify duplicates.
- It does not validate **auto-generated** invoices like **pay on receipt, pay on use, intercompany, or debit memos**.

A) Use Cases

Scenario 1 # Duplicate Invoice Check - Using Invoice Number:

The system automatically validates supplier invoices for duplicates by combining the invoice number with the supplier/site. This is a default, out-of-the-box feature that requires no configuration to enable and cannot be turned off.

The screenshot shows the 'Create Invoice' screen in the Vision system. The 'Invoice Header' section includes fields for Identifying PO, Business Unit (US1 Business Unit), Supplier (Lee Supplies), Supplier Number (1252), Supplier Site (Lee US1), Legal Entity (US1 Legal Entity), and Invoice Group. The 'Number' field is highlighted with a red box and contains '20260108-1'. The 'Amount' is '1,095.00' and the 'Date' is '1/8/26'. The 'Lines' section shows a single line item with a 'Number' of 1, 'Type' of Item, and 'Amount' of 1,000.00. The 'Totals' section shows a total of 1,095.00.

When a new invoice is generated with a similar invoice number to an existing invoice for the same Supplier/site, the system displays an error message and prevents the user from proceeding with invoice creation.

The screenshot shows the 'Create Invoice' screen in the Vision system. The 'Invoice Header' section includes fields for Identifying PO, Business Unit (US1 Business Unit), Supplier (Lee Supplies), Supplier Number (1252), Supplier Site (Lee US1), Legal Entity (US1 Legal Entity), and Invoice Group. The 'Number' field is highlighted with a red box and contains '20260108-1'. The 'Amount' is '2,000.00' and the 'Date' is '1/8/26'. An error message is displayed: 'Error: You must enter a different number. There's already an invoice with that number. (AP-810245)'. The 'Lines' section shows five line items, all with 'Type' of Item and 'Amount' of 2,000.00. The 'Totals' section shows a total of 2,000.00.

Enhanced Duplicate Invoice Check:

This is a new enhancement that enables duplicate invoice validation based on key invoice attributes, including invoice date, amount, supplier, invoice type, and currency. As part of this enhancement, changes have been introduced in the invoice transaction flow. The transaction model now performs a duplicate check using the specified attributes and displays a warning to the user if a potential duplicate invoice is detected.

Scenario 2 # Enhanced Duplicate Invoice Check

When the system identifies a potential duplicate invoice by validating the specified attributes, it displays a warning message along with a reference to the original invoice number. The user can choose either the 'Continue' or 'Review Later' option.

If the 'Continue' option is selected, the system assumes the user intends to proceed with invoice booking and automatically releases the 'Duplicate Invoice' hold.

If the 'Review Later' option is selected, the system places a hold on the invoice. Once the invoice is corrected, the user can release the hold either manually or automatically through invoice validation

Invoice Flow when 'Continue' Option is chosen,

The screenshot shows the 'Create Invoice' screen in the Vision system. The invoice number is 202601081. A warning message is displayed: 'Warning: This invoice has the same supplier, invoice date, amount, and currency as invoice 20260108-1. Verify that it isn't a duplicate.' The user can choose to 'Continue' or 'Review Later'. The 'Continue' button is highlighted in red.

* Number	* Type	* Amount	Distribution Set	Distribution Combination	Accounting Date	Prorate Across All Item Lines	* Budget Date	Status	Description	Tax Classification	Ship-to Location	Number	Line

Save and Close Cancel									

The screenshot shows the 'Create Invoice' screen in the Vision system. The invoice number is 202601081. The status is 'Validated'. The 'Continue' button is highlighted in red.

* Number	* Type	* Amount	Distribution Set	Distribution Combination	Accounting Date	Prorate Across All Item Lines	* Budget Date	Status	Description	Tax Classification	Ship-to Location	Number	Line
1	Item	1,000.00		101.10.63580.121.000.000	1/8/26		1/8/26	Reserved			Seattle		

Invoice flow when 'Review Later' Option is chosen,

The screenshot shows the 'VISION' system interface for creating an invoice. A warning dialog box is displayed in the center, stating: "Warning: This invoice has the same supplier, invoice date, amount, and currency as invoice 20260108-1. Verify that it isn't a duplicate." The dialog has two buttons: "Continue" and "Review Later". The "Review Later" button is highlighted with a red box. The background shows the invoice header and lines sections.

A 'Duplicate Invoice' hold is applied to the invoice, preventing further validation or accounting until the user reviews and takes the necessary action.

The screenshot shows the 'VISION' system interface for creating an invoice. A 'Manage Holds' dialog box is displayed in the center. The dialog has a 'Hold' tab selected, showing a table with the following data:

Name	Reason	Details	Line Held	Hold By	Date
Duplicate Invoice	This invoice has the same supplier, inv			VW.STU...	1/8/26 3:02 AM

The dialog also has a 'Release' tab and buttons for 'Save and Close' and 'Cancel'. The background shows the invoice header and lines sections.

Upon review, the Invoice date was changed, and the invoice was revalidated. This time, the hold was released, and the invoice was validated.

For this auto-evaluation to occur, the 'Manage Invoice Options' setup, specifically 'Evaluate Duplicate Invoice Hold during Validation', should be checked. If this option is not enabled, the user has to manually release the hold (as it's allowed per the hold definition).

B) Setups:

Look Up:

To use this feature, ensure the following lookup is created and enabled:

- Lookup Type: ADD_DUPLICATE_INV_CHECK
- Lookup Code: DUPLICATE_INVOICE_CHECK

Once enabled, the system enforces duplicate validation during invoice processing

(N) Setup and Maintenance > FSM > Search > Manage Payable Lookups

vision

Evaluate Duplicate Invoice Hold During Validation:

This optional setup was introduced in release 23B. It allows invoices with 'Duplicate Invoice' holds to be included in Invoice Validation, and the hold will be automatically released once the necessary correction or update is made to the invoice. However, this setup only functions if the 'Enhanced Duplicate Invoice Check' lookup is enabled.

Previously (before the 23B release), the user had to manually release the hold.
