Introduction

A) Objective

In Fusion Applications, by configuring Financial Accounting Hub (FAH), we can account transactions from third party system. This white paper is to elaborate different steps to be followed in case of requirement of “How to account transactions of Custom Application by using configuration available in FAH”.

B) Scope/Out of Scope

This white paper will cover followings:

- a) Using rapid installation to configure Custom Application Integration to Fusion Application
- b) Configure Financial Accounting hub to account transaction from Custom Application
- c) Upload csv file containing transactions from Custom Application to Fusion Application
- d) Account the uploaded transaction from custom application and Post to GL

This paper will not cover:

- a) Ledger setup in Fusion Applications

Business Case

D) Methodology

We will take few sample transactional data. Define expected accounting entries to be generated as per business requirement. Configure fusion FAH according to the accounting requirement. Upload the sample transactional data to FAH. Perform accounting in FAH and compare the accounting by FAH with expected accounting entries.

E) Business Example

Customer uses fusion financials to perform her standard financial transaction and its accounting. Additionally Customer has custom application to handle her specific business transactions. To have central repository of accountings customer need to pass accountings of transaction from custom application, to Fusion General Ledger.

Therefore, in summary, management's need is to:

- a) Continue business specific transaction in custom application
- b) Custom application transaction to be interfaced to Fusion Applications to account by using Financial Accounting Hub.

To map above requirement, we will take following prototype transactional example.

Customer creates two invoices in custom application. From Custom Application, transactional details would be interfaced to FAH. By using FAH configuration for the custom application, FAH would create compatible (compatible to Fusion GL) accounting of the interfaced transactions and post to GL.

We will take following example of transactions to explain the configuration:

- In custom application there are two standard invoices and details of those are as below
 - First invoice is for below items purchased from a domestic supplier for
 - Asset item of amount 1500 USD
 - Inventory item of amount 1000 USD
 - Second invoice is for below items purchased from foreign supplier
 - Asset item of amount 4000 USD
 - Inventory item of amount 2000 USD

Requirement is, create accounting of above invoices. The generated accountings should be compatible to Fusion GL.

Account Structure Mapping

To understand compatibility of accounting to Fusion GL in the example explained, let's review Account Structure of Fusion GL, (In other words Chart of account (COA)) has following 5 segments:

Segment1: Company

Segment2: Department

Segment3: Account

Segment4: Sub Account

Segment5: Product

In our example, derivation of value for Segment3 will depend on transactional data in custom application and for all other segments we will use following default values:

Segment1: 01

Segment2: 000

Segment4: 0000

Segment5: 000

For Segment3, mapping from custom application to fusion GL is as follows:

- Mapping for "Account" (Segment3):

Custom Application	Code From Custom Application to FAH	Segment3
Inventory	INV	1410
Asset	ASSET	1570
Domestic Supplier	DOMESTIC	2210
Foreign Supplier	IMPORTED	2222

Based on above mapping, Expected Accounting in Fusion GL is as follows :

Invoice#1

01-000-1410-0000-000	Dr	1000 USD-Charge Line
01-000-1570-0000-000	Dr	1500 USD-Charge Line
01-000-2210-0000-000	Cr	2500 USD-Liability Line

Invoice#2

01-000-1410-0000-000	Dr	2000 USD-Charge Line
01-000-1570-0000-000	Dr	4000 USD-Charge Line
01-000-2222-0000-000	Cr	6000 USD-Liability Line

We will follow below steps to map above accounting requirement mentioned:

- a) FAH Configuration - Configure FAH to generate expected accountings for transaction from custom application.
- b) Import data from custom application
- c) Account the transactions using FAH configuration and review the same.

Set Up Steps

F) Step By Step Guide to FAH Configuration

Register/define respective custom application in Fusion FAH

Define New Application

Below are two different ways to define application in Fusion FAH:

- a) Manually
- b) Rapid implementation

We will use Rapid implementation to define application.

Log in as application implementation consultant.

Query and open for project FAH

Navigate: Define Accounting Entry Configuration for Rapid Implementation>Create Subledger Application Setups in Spreadsheet

Click on Download Setup Template.

This will download excel template to local drive. Open the file and enter application data as per instruction provided in template.

After that click on Upload Setup File and upload the zip file stored in local drive.

This will create application and related data model as per setup data entered in excel template.

To query cutom application created by upload setup file:

Navigate: Define Accounting Entry Configuration for Rapid Implementation>Manage Subledger Application

Manage Subledger Application: XXAPPLBUS

Download Template Save

Subledger Application XXAPPLBUS

Short Name XX_APPL_BUS

Description XXAPPLBUS

Journal Source XXAPPLBUS

Control Account Type None

Drill Down URL

Support multiple valuation methods

Calculate reporting currency amounts

Event Model

View

XXAPPLBUS

XXAPPLBUS

XXINV

XXPAY

Edit Event Type: XXINV

Name XXINV

Short Name XX_INV

Description XXINV

Accounting

Active

We are going to use XXINV event type in test case used in this paper.

To verify source data created for application:

Navigate: Define Accounting Entry Configuration for Rapid Implementation>Manage Source

Manage Sources: XXAPPLBUS

View Freeze

* Object Column Name	* Name	* Level	* Data Type	Flexfield Segment Name	Flexfield Application	Flexfield Title	Lookup Application	Lookup Type
ACCOUNTED_AMOUNT	ACCOUNTED_AMOUNT	Line	Number					
ACCOUNTED_CURRENCY	ACCOUNTED_CURRENCY	Line	Alphanum...					
ACCRUAL_REV_GL_DATE	ACCRUAL_REV_GL_DATE	Header	Date					
APPLICATION_ID	Application Identifier	Header	Number					
BF_APPLIED_TO_AMOUNT	BF_APPLIED_TO_AMOUNT	Line	Number					
BF_APPLIED_TO_APPLIC...	BF_APPLIED_TO_APPLICATION_NAME	Line	Alphanum...					
BF_APPLIED_TO_DIST_T...	BF_APPLIED_TO_DIST_TYPE	Line	Alphanum...					
BF_APPLIED_TO_ENTITY...	BF_APPLIED_TO_ENTITY_CODE	Line	Alphanum...					
BF_APPLIED_TO_LINE_N...	BF_APPLIED_TO_LINE_NUM	Line	Number					
BF_APPLIED_TO_TXN_NUM	BF_APPLIED_TO_TXN_NUM	Line	Number					
DEFAULT_AMOUNT	Default Amount	Line	Number					
DEFAULT_CURRENCY	Default Currency	Line	Alphanum...					
DIST_TYPE	DIST_TYPE	Line	Alphanum...					

Relevant source data for our test case is as below

Source	Header/Line	Value	Additional Information
TRANSACTION_TYPE	H	XX_INV	
LEDGER_NAME	H	SPL	
TRANSACTION_DATE	H	Transaction Date	
TRANSACTION_NUMBER	H	Transaction Number	
TXN_TYPE	H	INV	
TXN_SUBTYPE_1	H	STD	
H_ID_1	H	DOMESTIC/IMPORTED	Type of Supplier
TRANSACTION_NUMBER	L	Transaction Number	
DEFAULT_AMOUNT	L	Line Amount	
DEFAULT_CURRENCY	L	Currency Code defined in Fusion GL	
LINE_NUM	L	Line Number	
DIST_TYPE	L	ITEM	Type of Transaction line
LN_ID_1	L	ASSET/INV	Type of Item in Transaction line

After defining custom application and its source data, next step is to define accounting configuration.

Define Mapping Set

Referring to business example explained, as per different values in source system such as Item type or Supplier type, different respective accounts need to be derived. This can be achieved by using Mapping set feature.

Navigation: Define Accounting Entry Configuration for Rapid Implementation> Define Accounting Rules for Rapid Implementaion>Manage Mapping Sets

Create Mapping Set

Name: **XX_CHARGE_NATURAL**
Short Name: **XX_CHARGE_NATURAL**
Output Type: **Segment**
Subledger Application: **XXAPPLBUS**

Description:
Status: **Active**

Input Sources

Actions: View, Select and Add

Number	Input Source	Value Set	Lookup Type	Segment
1	LN_ID_1			

Chart of Accounts

View: +, -

Chart of Accounts: **Operations Accounting Flex** Segment: **Account**

Operations Accounting Flex: Mappings

When entering input values, enter a value, an asterisk to represent any value, or leave blank for no value.

View: +, -, Export, Import, Set Default

Default	Input	Output	Effective Start Date	Effective End Date
	LN_ID_1	Account		
No data to display.				

Create Mapping Set

Name: **XX_CHARGE_NATURAL**
Short Name: **XX_CHARGE_NATURAL**
Output Type: **Segment**
Subledger Application: **XXAPPLBUS**

Input Sources

Chart of Accounts

Operations Accounting Flex: Mappings

When entering input values, enter a value, an asterisk to represent any value, or leave blank for no value.

View: +, -, Export, Import, Set Default

Default	Input	Output	Effective Start Date	Effective End Date
	LN_ID_1	Account		
	ASSET	1570		
	INV	1410		

Above set up maps Type of item purchased (LN_ID_1) to respective natural accounts in Fusion GL.

Similar mapping set need to be defined to map Type of supplier.

Create Mapping Set

* Name: XX_LIAB_NATURAL
 * Short Name: XX_LIAB_NATURAL
 * Output Type: Segment
 Subledger Application: XXAPPLBUS

Description:
 Status: Active

Input Sources

Actions: View, Select and Add

Number	Input Source	Value Set	Lookup Type	Segment
1	H_ID_1			

Chart of Accounts

View: +, X

Chart of Accounts: Operations Accounting Flex
 Segment: Account

Operations Accounting Flex: Mappings

When entering Input values, enter a value, an asterisk to represent any value, or leave blank for no value.

View: +, X, Export, Import, Set Default

	Input	Output	Effective Start Date	Effective End Date
Default	H_ID_1	Account		

No data to display

Create Mapping Set

* Name: XX_LIAB_NATURAL
 * Short Name: XX_LIAB_NATURAL
 * Output Type: Segment
 Subledger Application: XXAPPLBUS

Input Sources

Chart of Accounts

Operations Accounting Flex: Mappings

When entering Input values, enter a value, an asterisk to represent any value, or leave blank for no value.

View: +, X, Export, Import, Set Default

	Input	Output	Effective Start Date	Effective End Date
Default	H_ID_1	Account		
	DOMESTIC	2210		
	IMPORTED	2222		

Above set up maps Type of supplier (H_ID_1) to respective natural accounts in Fusion GL.

This completes mapping set configuration.

We defined below two mapping set

Manage Mapping Sets: XXAPPLBUS

► Search

◄ Search Results

Actions ▼ View ▼ +   

Name	Description
XX_CHARGE_NATURAL	
XX_LIAB_NATURAL	

Next step to define Account rule.

Define Account rules

Navigation: Define Accounting Entry Configuration for Rapid Implementation> Define Accounting Rules for Rapid Implementaion>Manage Accounting Rules

The screenshot shows the 'Create Account Rule' form for rule XX_CHARGE_AR. The form includes fields for Name, Short Name, Description, Chart of Accounts, Rule Type, and Account. The 'Rules' section shows a single rule with Priority 1, Value Type 'Mapping set', and Value 'XX_CHARGE_NATURAL'. The 'Rule 1: Conditions' section is empty. The right sidebar shows metadata for Subledger Application XXAPPLBUS, Status Active, Created By APPLICATION_IMPLEMENTATION_CONSULTANT, Creation Date 3/28/18 2:57 PM, Last Updated By APPLICATION_IMPLEMENTATION_CONSULTANT, and Last Update Date 3/28/18 2:57 PM.

Above accounting rule is to derive natural account for Charge line based on Mapping set XX_CHARGE_NATURAL

The screenshot shows the 'Create Account Rule' form for rule XX_LIAB_AR. The form includes fields for Name, Short Name, Description, Chart of Accounts, Rule Type, and Account. The 'Rules' section shows a single rule with Priority 1, Value Type 'Mapping set', and Value 'XX_LIAB_NATURAL'. The 'Rule 1: Conditions' section is empty. The right sidebar shows metadata for Subledger Application XXAPPLBUS, Status Active, Created By APPLICATION_IMPLEMENTATION_CONSULTANT, Creation Date 3/28/18 3:02 PM, Last Updated By APPLICATION_IMPLEMENTATION_CONSULTANT, and Last Update Date 3/28/18 3:02 PM.

Above accounting rule is to derive natural account for Charge line based on Mapping set XX_LIAB_NATURAL

As per business requirement, Account code to be derived as constant value for all segments except Natural account (Segment3) and Natural account (Segment3) is to be derived based on data from source custom application. To derive constant values for all segments except Natural account, define another Account rule as below:

This completes configuration for Account rules. We defined three account rules shown as below:

Name	Description	Status	Created By
XX_CONSTANT	XX_CONSTANT	Active	APPLICATION_IMPLEMENTATION...
XX_CHARGE_AR	XX_CHARGE_AR	Active	APPLICATION_IMPLEMENTATION...
XX_LIAB_AR	XX_LIAB_AR	Active	APPLICATION_IMPLEMENTATION...

Next step is to define Jornal line rules.

Define Journal Line Rule

As per business requirement, accounting of transaction from custom application contains two different of journal line, Charge and Liability.

Navigation: Define Accounting Entry Configuration for Rapid Implementation> Define Accounting Rules for Rapid Implementaion>Manage Journal Line Rules

The screenshot shows the 'Create Journal Line Rule' form for 'XX_CHARGE'. The form has tabs for 'Conditions', 'Advanced Options', and 'Accounting Attributes Assignments'. The 'Conditions' tab is active, showing a condition: "TXN_TYPE" = INV 'AND' "TXN_SUBTYPE_1" = STD. The 'Advanced Options' tab shows 'Accounting Class' as Expense, 'Merge Matching Lines' as No, 'Subledger Application' as XXAPPLBUS, and 'Status' as Active. The 'Accounting Attributes Assignments' tab shows 'Side' as Debit.

Note: Condition is "TXN_TYPE" = INV 'And' "TXN_SUBTYPE_1" = STD
Both variables TXN_TYPE and TXN_SUBTYPE_1 are header source data
Side: Debit as Charge account is generally debited

The screenshot shows the 'Create Journal Line Rule' form for 'XX_LIAB'. The form has tabs for 'Conditions', 'Advanced Options', and 'Accounting Attributes Assignments'. The 'Conditions' tab is active, showing a condition: "TXN_TYPE" = INV 'AND' "TXN_SUBTYPE_1" = STD. The 'Advanced Options' tab shows 'Accounting Class' as Liability, 'Merge Matching Lines' as Debit or credit, 'Subledger Application' as XXAPPLBUS, and 'Status' as Active. The 'Accounting Attributes Assignments' tab shows 'Side' as Credit.

Note: Condition is "TXN_TYPE" = INV 'And' "TXN_SUBTYPE_1" = STD
Both variables TXN_TYPE and TXN_SUBTYPE_1 are header source data
Side: Credit as Liability account is generally credited

This completes Journal line rule configuration.
We defined two journal lines

The screenshot shows the 'Manage Journal Line Rules: XXAPPLBUS' table. The table has columns for Name, Description, Status, and Created By. There are two rows: 'XX_LIAB' and 'XX_CHARGE'. Both rows have a status of 'Active' and were created by 'APPLICATION_IMPL...'. The table also has a 'Search' button and a 'Saved Search' dropdown.

Name	Description	Status	Created By
XX_LIAB	XX_LIAB	Active	APPLICATION_IMPL...
XX_CHARGE	XX_CHARGE	Active	APPLICATION_IMPL...

Next step is to define Jornal Line Rule Sets

Define Journal Rule Sets

Navigation: Define Accounting Entry Configuration for Rapid Implementation> Define Accounting Rules for Rapid Implementaion>Manage Subledger Journal Entry Rule Set

Create Subledger Journal Entry Rule Set

Actions: Save Save and Create Another Save and Close Cancel

Name: XX_JER
Short Name: XX_JER
Description: XX_JER

Subledger Application: XXAPPLBUS
Event Class: XXAPPLBUS
Event Type: XXINV
Chart of Accounts: Operations Accounting Flex
Status: Incomplete

Details

Journal Entry

Accounting Date: Transaction Date
Accrual Reversal Accounting Date Source: ACCRUAL_REV_GL_DATE
Description Rule:

Journal Lines

View: Freeze Detach

Line Type	Journal Line Rule	Accounting Class	Account Combination Rule	Company	Department	Account	Sub-Account	Product	Line Description Rule
Credit	XX_LIAB	Liability	XX_CONSTANT			XX_LIAB			
Debit	XX_CHARGE	Expense	XX_CONSTANT			XX_CHARG			

Columns Hidden: 23 Columns Frozen: 4

Credit, XX_LIAB: Supporting References

View: Detach

Supporting Reference

No supporting reference to display.

One by one add both Journal Line Rules defined in previous step to Journal Line Rule Set.

For Journal Line Rule XX_LIAB, account would be derived by overlaying natural account from rule XX_LIAB_AR on account derived by account rule XX_CONSTANT

For Journal Line Rule XX_CHARGE, account would be derived by overlaying natural account from rule XX_CHARGE_AR on account derived by account rule XX_CONSTANT

This completes configuration of Journal Entry Rule Set.

Next step is to attach the above journal entry rule set to Accounting Method.

Edit Accounting Method

Navigation: Define Accounting Entry Configuration for Rapid Implementation> Define Accounting Rules for Rapid Implementation>Manage Accounting Methods
Query the Accounting method attached with Ledger.

The screenshot shows the 'Edit Accounting Method' form. The 'Name' field is 'SAN_ENCUM_ACCRUAL', 'Short Name' is 'SAN_ENCUM_ACCRUAL', and 'Description' is empty. The 'Chart of Accounts' is set to 'Operations Accounting Flex'. The 'Status' is 'Active'. The 'Created By' is 'APPLICATION_IMPLEMENTATION_CONSULTANT', 'Creation Date' is '3/25/18 6:11 PM', 'Last Updated By' is 'APPLICATION_IMPLEMENTATION_CONSULTANT', and 'Last Update Date' is '3/25/18 6:14 PM'. The 'Journal Entry Rule Set Assignments' section shows a table with one row: 'Event Class' is 'XXAPPLBUS', 'Event Type' is 'XXINV', 'Rule Set' is 'XX_JER', 'Status' is 'Incomplete', 'Effective Start Date' is empty, and 'Effective End Date' is empty. The 'Status' is 'Incomplete'.

Note: Status is Incomplete for Rule set XX_JER assigned to accounting method
Activate the edited Accounting method by navigating to Action drop down

The screenshot shows the 'Edit Accounting Method' form. The 'Name' field is 'SAN_ENCUM_ACCRUAL', 'Short Name' is 'SAN_ENCUM_ACCRUAL', and 'Description' is empty. The 'Chart of Accounts' is set to 'Operations Accounting Flex'. The 'Status' is 'Active'. The 'Created By' is 'APPLICATION_IMPLEMENTATION_CONSULTANT', 'Creation Date' is '3/25/18 6:11 PM', 'Last Updated By' is 'APPLICATION_IMPLEMENTATION_CONSULTANT', and 'Last Update Date' is '3/25/18 6:14 PM'. The 'Journal Entry Rule Set Assignments' section shows a table with one row: 'Event Class' is 'XXAPPLBUS', 'Event Type' is 'XXINV', 'Rule Set' is 'XX_JER', 'Status' is 'Incomplete', 'Effective Start Date' is empty, and 'Effective End Date' is empty. The 'Status' is 'Incomplete'. A confirmation dialog box is displayed with the message 'The Activate Journal Entry Rule Set Assignments process is complete.' and an 'OK' button.

The screenshot shows the 'Edit Accounting Method' form. The 'Name' field is 'SAN_ENCUM_ACCRUAL', 'Short Name' is 'SAN_ENCUM_ACCRUAL', and 'Description' is empty. The 'Chart of Accounts' is set to 'Operations Accounting Flex'. The 'Status' is 'Active'. The 'Created By' is 'APPLICATION_IMPLEMENTATION_CONSULTANT', 'Creation Date' is '3/25/18 6:11 PM', 'Last Updated By' is 'APPLICATION_IMPLEMENTATION_CONSULTANT', and 'Last Update Date' is '3/25/18 3:22 PM'. The 'Journal Entry Rule Set Assignments' section shows a table with one row: 'Event Class' is 'XXAPPLBUS', 'Event Type' is 'XXINV', 'Rule Set' is 'XX_JER', 'Status' is 'Active', 'Effective Start Date' is empty, and 'Effective End Date' is empty. The 'Status' is 'Active'.

This completes Configuration in FAH.

G) Transactions Processing

Data Preparation

Transaction data from custom application need to be uploaded to FAH. Data need to be prepared in specific template, generated by FAH. FAH provides the template based on configuration done for the custom application.

Download Data Template

Log in as application implementation consultant.

Query and open for project FAH

Navigate: Define Accounting Entry Configuration for Rapid Implementation>Manage Subledger Application

Manage Subledger Application: XXAPPLBUS

Subledger Application: XXAPPLBUS
Short Name: XX_APPL_BUS
Description: XXAPPLBUS
Journal Source: XXAPPLBUS
Control Account Type: None

Event Model
View: [dropdown]
[search bar with XXAPPLBUS]
