

EBS vs. Cloud Functionality

Comparison of functionality between Oracle E-Business Suite R12.x and Oracle Cloud Applications

Overall Technical Differences

General Navigation and UI

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Branding	Appearance	Themes allow users to choose from several color schemes, upload logo and background files locally, and change text and navigation icon colors
Top Hat	Structure	All access to modules is available through one home screen, with the ability to personalize whether specific functions are visible
N/A	Sandboxes	Changes to structure, appearance, page layouts, flexfields, etc. can be created in an embedded sandbox and reviewed by the developer on screen prior to publishing to all users
Enterprise Search	Global Search	Ability to search for recent transactions, people, and recent searches from the home page
Top 10 List	Favorites	Unlimited favorites, plus the ability to navigate to the recent screens accessed
N/A	Watchlist	Navigate to specific transactions based on a saved search from the home page
Work List	Worklist and Notifications	Worklist can be accessed from the home page; bell icon shows open notifications and can action
Wildcard Search (%)	Wildcard Search	Can search using wildcards (% or *); underscores to replace a single character, or quotation marks for exact searches

General Navigation and UI

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Export	Export	Some EBS forms had the ability to export the data results to Excel. In Cloud, all modules have the ability to export tabular data into Excel
Print Screen	Print Me	Most transactions have the ability to create a printable view of the page that can be sent to a printer
WebADI	ADF Desktop Integration	The Excel plug in for the ADF Data Integration tool is available embedded within Cloud
N/A	Social Network	Transactions have the ability to interact and communication via embedded “social” networking where communications can be attached to the transaction directly
Concurrent Programs	Scheduled Processes	Largely function the same between EBS and Cloud; however, there is improved output file review and download capabilities in the Cloud
N/A	Proxies	A user can designate another user to work on their behalf if the user has the appropriate access and auditing is turned on
Audit	Audit	Auditing of field-level changes can be setup in the application via a UI
Help	Help	Ability to embed custom help content directly into the pages
Languages	Languages	Languages can be activated with Cloud Support and the user chooses their language at login. All forms automatically translate labels; translation fields exist for user-entered data

Technical Components

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Database Access	Custom Data Models	No direct database access; can create PL/SQL queries to query data from the database
Procedures and Packages	Procedures and Packages	Source code follows similar procedures, but Cloud customers do not have access to view or modify this source code.
Custom schemas	PaaS	All custom schemas, procedures, tables can be loaded in a separate PaaS environment but not to the baseline code. Data must be extracted from Fusion and then reloaded via the API
Personalizations	Page Composer	Personalizations around hiding fields/making fields required, changing labels, and moving fields can generally be handled with the Page Composer in Cloud. Limitations exist around inserting custom view objects to bring in data/fields that are not part of the original screen
Workflow Builder	BPM	All workflows are built using BPM from within the application. Custom code and attributes cannot be deployed from within the BPM toolset. Workflows are managed through the BPM Administration screens.
AME	AMX	A front end Approvals Management engine exists for Procurement only; remainder need to be built using BPM Workflow
API/Interface Tables	File-Based Loaders	All master data and transactions have Excel-based loader files that can be uploaded into Cloud without the need for custom code to call the API
Setup in “Super User” Responsibilities	Common Setup and Maintenance Area	All setup and maintenance activities are consolidated in one area, with privileges to access this area granted through roles

Technical Components

EBS Concept	Cloud Concept	Comments on Cloud Functionality
N/A	Implementation Projects	Sets of setup and maintenance tasks can be grouped into implementation projects and assigned to resources. Due dates and completion statuses can be tracked
iSetup	Configuration Packages	Most setup and maintenance, workflow, and personalizations can be migrated from a TEST instance to PROD via a system generated process; significantly improved over EBS
N/A	Features	As new functionality is released, the users have the ability to opt-in to the features
Clones	Refreshes	Instance refreshes are established via a service request with Oracle and can be performed with three weeks advanced notice
Patches	Releases	Oracle will release patches quarterly in the form of a release. One-off patches can be requested as an exception if bugs are found
Single Sign On	Single Sign On	Embedded support for most third party identity management applications; no additional software or technology components are required
Universal Content Manager	Universal Content Manager	Log files, output files, file-based loaders, and attachments are stored in a common UCM repository within the applications
Diagnostics	Diagnostics	Embedded diagnostics tools available to users based on roles and works similarly to EBS

Technical Components

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Alerts	Alerts	Alert functionality is limited in Cloud and currently only applies to HCM transactions; other tools are available including Watchlists, Reporting, and others
SOA Gateway; XML Gateway; e-Commerce Gateway	REST/SOAP APIs	Most transactions and master data have REST/SOAP APIs exposed through Cloud. Oracle Integration Cloud has many pre-built connectors for these objects
Installed Applications	Offerings	All modules and module families can be controlled through Offerings to enable or disable the functionality in your pod
Browser Certification	Browser Certifications	While similar browsers can be used between EBS and Cloud, there is less dependence of browser updates based on the architecture of the forms in the Cloud. There is no javax requirement for Cloud, and all forms are built using ADF
	Mobile Device Access	The Cloud products being standardized on ADF allows the user to access the applications from any device, including mobile devices and tablets

Security

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Responsibilities	Roles	Roles contain functional security (access to specific functions from within a module) and data security (access to what data can be viewed once in the module). Roles can be automatically assigned to users based on certain criteria (job, department, etc.)
User Management	Users	Users can have user names automatically created, with system generated password reset links.
Password Policy	Password Policy	Controlled through the UI in Cloud, can assign different password policies to different groups of resources
Transparent Data Encryption	Encryption, Data Masking	Certain fields are encrypted in the Cloud by default, and others can be set to be encrypted. Data Masking is an additional service that can be purchased from Oracle where they mask Test instances

Reporting

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Reports Developer/ Discoverer	OTBI (Oracle Transactional Business Intelligence)	Cloud provides a complete reporting solution embedded within the applications for all real-time reporting needs for data that exists in the ERP, HCM, SCM, EPM, and CX Clouds. This reporting tool uses BI Answers as a front end, which allows for a much greater capability for users to develop their own ad-hoc reporting
Dashboards	Dashboards	Significant improvements to the ability to create dashboards and deploy them within the application
	Infolets	Cloud has introduced the concept of infolets as a display option for KPIs. Many infolets are deployed for each of the modules, and these can be modified or new infolets created and deployed to the dashboards
BI/XML Publisher	BI/XML Publisher	BI/XML Publisher is the standard reporting tool for all report outputs (other than the ad-hoc reporting listed above). All forms and outputs are standardized on this toolset.

Financials

Organization Structure

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Operating Units	Business Units	Business units are the equivalent to the operating unit concept in EBS; Data can be restricted based on operating unit across most modules
Legal Entity	Legal Entity	Legal entity structure is about the same, can be selected on certain transaction types (like payables invoices). Balancing segment can be set at the Ledger level or the Legal Entity
Inventory Organizations	Inventory Organizations	Inventory organizations are similar to the EBS inventory organizations. Costing has been broken out into a separate organization
N/A	Costing Organizations	Costing organizations are now separated from inventory organizations, so that different costing methods can be tracked separate from the inventory org. A relationship is established between the costing org and the inventory org for processing
N/A	Project Organizations	Project Organizations allow sharing of configurations and attributes across any number of business units that have similar requirements vs. Separate configuration by operating unit in EBS for the Projects module
Ledgers and Ledger Sets	Ledgers and Ledger Sets	Ledger and ledger set structure are fundamentally the same between EBS and Cloud. Primary and secondary ledgers are still supported
Chart of Accounts	Chart of Accounts	Chart of accounts represents the structure and qualifiers for the segments in a chart
N/A	Chart of Accounts Structure Instance	Chart of accounts structure instance is the object to which value sets are attached to the structure. A chart of accounts may have multiple structure instances with different values sets for particular segments, which in effect is a different COA.

General Ledger

EBS Concept	Cloud Concept	Comments on Cloud Functionality
N/A	Multiple Balancing Segments	Cloud can have up to three balancing segments in the Chart of accounts, primary, secondary, and third balancing segments
Journal Entries	Journal Entries	Cloud has improved UI for entering and searching for Journals; fundamental structure remains the same. Journals can be created with an ADFDI Spreadsheet. Posting, reversing, and approving journals remains largely the same
Allocations/Recurring Journals	Allocations	Architecture for creating allocation rules is significantly improved vs. MassAllocation formulas. The Cloud process leverages Essbase to use EPM concepts via the Allocation Manager. Recurring journal concept is retired in Cloud substituted by formula allocations or ADFDI uploads.
FSG Reporting	Financial Reporting Center	The GL leverages an Essbase cube and all of the power that goes along with that, including the ability to use SmartView in Excel and Account Inspector functionality
Account Balances	Account Balances	Cloud will allow you to view the account balances for a specific account specified on a journal entry on screen without performing a separate query
	Account Inspector/Monitor	Ability to easily view account balances and positions based on the dimensions established in the chart of accounts, and perform analysis of budget vs. analysis
Account Hierarchies	Account Hierarchies	Leverages the account hierarchy builder, similar to PeopleSoft, for both ERP and EPM. Allows the user to build multi-level hierarchies or "trees" in a graphical form or via a spreadsheet. Date-related hierarchies allow for like-for-like comparisons when the rollups change year over year.

General Ledger

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Budgets	Budgets	Budget data is uploaded into the Cloud, and no longer has the concept of a budget organizations, versions, or budget journals. The versioning functionality has been moved to Planning and Budgeting Cloud Service. Cloud does allow for multiple scenarios such as Budget and Forecast
Currency	Currency	Foreign currency concepts are roughly the same between EBS and Cloud; currency conversion rates can be loaded via ADF DI or webservices. Many integration plugins are available. All currencies are enabled in Cloud out of the box vs. Enabling specific currencies
Advanced Global Intercompany System (AGIS)	Intercompany	Intercompany transactions are fundamentally the same; however, configurations for the intercompany organization are easier to configure and manage. Intercompany customer and supplier relationships across intercompany organizations is no longer required.
Period Close	Period Close	Significant improvements in the period close processes, including visibility into the status of subledger close from one screen. Summary of issues preventing close are listed on the same screen. Subledger reconciliation processes are available to improve analysis for both Payables and Receivables
Ad-Hoc Reporting	Ad-Hoc Reporting	All screens have Excel export features; OTBI is available to support the building of custom analysis; standard reports are built on the same OTBI platform; custom data models can be built to support GL to subledger reporting
Consolidation	Consolidation	Consolidation processes are comparable between EBS and Cloud

Fixed Assets

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Asset Additions/Retirement/Disposal	Asset Additions/Retirement/Disposal	Functionality for asset additions/retirement/disposal is comparable between EBS and Cloud – manual or mass. ADFDI upload is enhanced for retirements.
Asset Command Center	Asset Landing Page	Cloud provides an asset landing page that summarizes additions, adjustments, transfers, retirement, and depreciation information. Each of these can also be summarized on a Watchlist
Leased Assets	Leased Assets	Improved features around leased assets and compliance reporting. Cloud can track lease obligation and related right of use assets using implied rate.
Grouped Assets	Grouped Assets	Comparable functionality between EBS and Cloud
Maintenance	Maintenance	Improved capabilities for mass changes to asset data
Asset Books	Asset Books	Comparable functionality between EBS and Cloud
Depreciation	Depreciation	Comparable functionality between EBS and Cloud
Physical Inventory	Physical Inventory	Comparable functionality between EBS and Cloud
CIP Assets	CIP Assets	Improved Capital Projects to Asset process; CIP functionality in Assets is comparable
What-If Analysis	What-If Analysis	Improved What-If Analysis processes

Cash Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Reconciliation Matching Rules	Reconciliation Matching Rules	Improved number of fields that can be used to support matching logic in Cloud
Bank/Branch/Account	Bank/Branch/Account	Loader programs and ADF DI in Cloud make it easier to upload and maintain data
Bank Statement Import	Bank Statement Import	Standard BAI2 statement formats delivered out of the box in Cloud. Custom control files not supported
Cash Positioning	Cash Positioning	Positioning functionality is comparable between EBS and Cloud; however, the dashboard, infolets, and reporting capabilities are superior in Cloud
Cash Forecasting	Cash Forecasting	Forecasting functionality is comparable between EBS and Cloud; however, the dashboard, infolets, and reporting capabilities are superior in Cloud
	SmartView Integration	Cash Management can leverage SmartView for forecasting
N/A	External Transactions	Can create/upload external transactions to reconcile to bank statement lines directly in Cash Management with or without accounts. Replaces Mark as External feature in EBS with enhanced features.
Treasury		There is a lack of true Treasury functionality in Cloud

Tax

EBS Concept	Cloud Concept	Comments on Cloud Functionality
EB Tax	Fusion Tax	Comparable functionality and configurations between EBS and Cloud. Spreadsheet upload of tax setup is available. Withholding tax configuration moved to the Fusion Tax engine from Payables
US Tax File	US Tax File	Tax rate and geography files can be integrated into Cloud via spreadsheet or integration from validated tax partners only
Tax Reporting	Tax Reporting	A number of predefined tax reports have been created in Cloud, and are more easily editable using BI Publisher

Localizations

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Localizations	Localizations	Localization catalog for Cloud in 20c is located here: https://www.oracle.com/webfolder/technetwork/tutorials/tutorial/cloud/r13/nfs/erp-cloud-global-catalog.pdf Localization functionality is comparable between EBS and Cloud, with no gaps between the two systems

Expenses

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Expense Entry	Expense Entry	Comparable functionality between EBS and Cloud, with an improved UI in Cloud.
Policy Compliance	Policy Compliance	Comparable functionality between EBS and Cloud
Mileage Tracking	Mileage Tracking	Comparable functionality between EBS and Cloud
Audit	Audit	Comparable functionality between EBS and Cloud. Duplicate identification rules not yet available in Cloud.
Advances	Advances	Comparable functionality between EBS and Cloud
Credit Card Integration	Credit Card Integration	Comparable functionality between EBS and Cloud
Per Diem	Per Diem	Comparable functionality between EBS and Cloud
Mobile Apps	Mobile Apps	The mobile expense application available for EBS is the same application available for Cloud. The mobile app is more tightly integrated with Cloud
	Travel Provider Integration	Cloud has integration with a single travel provider (GetThere) that will allow expense users to book trips (airfare, hotels) – requires a GetThere account
	Expenses Digital Assistant	Allows the user to communicate via a chatbot to get an expense entered
Employees as Suppliers		Employees are not setup as suppliers in Cloud when using Cloud expenses. The party record of employee is used for payment processing in Payables
Employee Bank Accounts	Employee Bank Accounts	Employee bank accounts can be managed via a self-service portal

Payables

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Payables Workbench	Invoice Dashboard	Invoice dashboard in Cloud has analytics and summarizes the transactional data
3 rd party tools	Invoice Imaging	Cloud has embedded invoice scanning capabilities without the need for a 3 rd party solution
Funds Disbursement	Funds Disbursement	Comparable functionality for payments between EBS and Cloud
Bank Transmission File	Bank Transmission Files	Comparable functionality for payments between EBS and Cloud for payment systems and transmission formats. PGP is available in Cloud without external integration
Retainage	N/A	The concept of retainage and services procurement does not exist in the Cloud
Procurement Cards	N/A	Procurement Card functionality not yet available in Cloud
Prepayments	Prepayments	Comparable functionality between EBS and Cloud
AP/AR Netting	AP/AR Netting	Comparable functionality between EBS and Cloud
Recurring Invoices	Recurring Invoices	Comparable functionality between EBS and Cloud. Cloud uses ADFDI template to create recurring invoices vs. UI
Holds	Holds	Comparable functionality between EBS and Cloud. Cloud allows for Hold Approval Workflow configuration in BPM.

Payables

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Validation	Validation	Comparable functionality between EBS and Cloud
Installment	Installment	Comparable functionality between EBS and Cloud
Tolerances	Tolerances	Comparable functionality between EBS and Cloud
PO Match	PO Match	Comparable functionality between EBS and Cloud
Multi-Period Accounting	Multi-Period Accounting	Comparable functionality between EBS and Cloud
Invoice Approval	Invoice Approval	Approval notifications can be modified using BI Publisher; Invoice approval rules can be created in spreadsheets or via BPM workflow (AME is not activated for Invoice Approvals in Cloud)
	Centralized Payments	Payment processing can be centralized across business units in Cloud
1099/1096	1099/1096	Comparable functionality between EBS and Cloud
Payables Close	Payables Close	Comparable functionality between EBS and Cloud
	Invoice Coding Workflow	Invoices can be routed for someone to provide the invoice distribution on the invoice prior to accounting the invoice and submitting for payment

Invoice Imaging

EBS Concept	Cloud Concept	Comments on Cloud Functionality
3 rd Party Solutions	Invoice Imaging	Cloud introduces the concept of automated invoice imaging for AP invoices. The documents from suppliers can be sent to an email box, run through an OCR engine, and imported into accounts payable into a scanned images queue. The electronic copy of the document sent is attached to the invoice transaction, and any issues identified will be highlighted for corrections prior to validating the invoice. Incoming invoices via this process can be routed to different AP resources based on workflow rules. These invoices show up in the AP user's queue on their home page to review.

Receivables

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Transactions	Transactions	No Deposit Invoice or Guarantee transaction types in Cloud. Prepayments can be created via OM or API.
Bill Presentment	Bill Presentment	Invoice formats created in BI Publisher and can be updated into the OTBI folder without the need for UNIX access. Templates can be specified on the transaction class or during the bill presentment run. Previews of the bill exist throughout the application modules. Printed invoices can be stored as attachments. Invoice outputs can be HTML, PDF, Excel and can be emailed.
Cash Receipts	Cash Receipts	Improved functionality for auto application of Cash Receipts outside of lockbox using auto application rules and exception rules
Balance Forward Billing	Balance Forward Billing	Comparable functionality between EBS and Cloud
Revenue	Revenue	Improved revenue scheduling capabilities; Cloud provides an optional Revenue Management module to perform all revenue management activities
Lockbox	Lockbox	Comparable functionality between EBS and Cloud
AutoInvoice	AutoInvoice	Comparable functionality between EBS and Cloud; use of ADF DI spreadsheet to make autoinvoice corrections
XML	XML	Comparable functionality between EBS and Cloud
Salesperson	Salesperson	Comparable functionality between EBS and Cloud. Salesperson no longer part of customer record.

Receivables

EBS Concept	Cloud Concept	Comments on Cloud Functionality
iReceivables	Bill Management	Improved customer portal for managing and viewing invoices
Credit Management	Credit Management	Credit management has improved functionality in the Cloud
Receivables Workbench	AR Dashboard	Cloud leverages infolets and tabular displays of data and exceptions for an improved user experience
Credit Cards	Credit Cards	Real time credit card processing is available in limited capacity in Cloud, and is limited to certain PCI-compliant data centers. CyberSource is the only service for tokenization and payments
Adjustments	Adjustments	Comparable functionality between EBS and Cloud
Recurring Invoice	Recurring Invoice	Significant improvement in functionality related to the ability to create a recurring billing plan
Credit Memo Approvals	Credit Memo Approvals	Credit memo approval workflow does not leverage AME in cloud, but BPM can be configured. Credit Memo approval only for Dispute workflow
TCA (Customer)	TCA (Customer)	Customer structure of Organization, Account, Address, and Site is similar in Cloud. Sites are associated to Reference Data sets and not Business Units and can be shared across all BUs if desired. Only accounting on customer is BU specific.

Advanced Collections

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Strategies	Strategies	Comparable functionality between EBS and Cloud
Dunning	Dunning	Comparable functionality between EBS and Cloud – more easily modified templates
Campaigns	Collections Work	Navigation improvements make the process of organizing work easier
Notes	Notes	Comparable functionality between EBS and Cloud
Dun & Bradstreet	Dun & Bradstreet	Comparable functionality between EBS and Cloud
Metrics	Metrics	Significantly improved metrics capabilities to track effectivity of collectors. Cannot create custom metrics in Cloud.
Collections	Collections	Comparable functionality between EBS and Cloud – improved UI for processing
Disputes	Disputes	Comparable functionality between EBS and Cloud
business Center	Collection Manager Dashboard	Superior UI for centralized dashboard, linked into transactional data
	Case Folder	Case folders can be created to group transactions that are processing through the same credit discussions

Procurement

Self Service Procurement/Requisitions

EBS Concept	Cloud Concept	Comments on Cloud Functionality
	Supplier Registration	Cloud provides a mechanism to allow a user to enter new supplier details, and route for approval
Procurement Cards	Procurement Cards	Procurement card functionality is more robust in EBS; Pcards can be used in Cloud with requisition processing but do not integrate into AP, Expenses, etc.
Catalogs/Punchout	Catalogs/Punchout	Comparable functionality between EBS and Cloud
Shopping Lists	Shopping Lists	Comparable functionality between EBS and Cloud
Content Zones/Smart Forms	Content Zones/Smart Forms	Comparable functionality between EBS and Cloud
Requisition UI	Requisition UI	All requisitions are processed through Self Service Purchasing in Cloud – there is no “forms based” UI for requisitions processing. Requisition screens can be more easily personalized
Requisition Approval	Requisition Approval	Requisition approval leverages AMX (front end workflow tool) in Cloud
Approval Checkout	Amend requisition	Comparable functionality between EBS and Cloud
	Requisition Lifecycle	End-to-end view of requisition details, from approvals to PO to receiving to invoice status
	Mobile App	Self Service Procurement Cloud mobile app for requisition processing

Self Service Procurement/Requisitions

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Blanket and Contract Agreements	Blanket and Contract Agreements	Comparable functionality between EBS and Cloud
	Digital Assistant	Leverage the digital assistant to use a chatbot to order specific products
Desktop Receiving	Desktop Receiving	Comparable functionality between EBS and Cloud
Services Procurement		Services Procurement does not exist in Cloud

Purchasing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Buyers	Buyers	Comparable functionality; improved buyer assignment rules capabilities in Cloud
Document Approval	Document Approval	Document approval leverages AMX (front end workflow tool) in Cloud
Purchase Order Types	Purchase Order Types	Comparable functionality between EBS and Cloud
AutoCreate Documents	AutoCreate Documents	Requisitions can automatically turn into purchase orders without a modification of the workflow in Cloud
AutoCreate	Document Builder/Process Requisitions	Improved UI for viewing approved requisition lines that were not automatically created and assembling them into purchase orders
Drop Shipments	Drop Shipments	Improved integration and visibility between OM and procurement for drop shipments
Back to Back Orders	Back to Back Orders	Improved integration and visibility between OM and procurement for back to back orders
Contract Manufacturing	Contract Manufacturing	Improved integration and visibility between OM and procurement for contract manufacturing
Supplier Records	Supplier Records	Comparable functionality between EBS and Cloud
Document Templates	Document Templates	Purchasing document formats created in BI Publisher are easier to maintain in Cloud
Purchase Order Status	Purchase Order Lifecycle	End-to-end view of PO details, from requisitions to approvals to receiving to invoice status
	Shared Services	Robust shared services capabilities in Cloud

Procurement Contracts

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Contract Terms	Contract Terms	Comparable functionality between EBS and Cloud, including MS Word integration
Authoring	Authoring	Comparable functionality between EBS and Cloud; some additional guided authorizing features
Approvals	Approvals	Comparable functionality between EBS and Cloud
Deliverables	Deliverables	Comparable functionality between EBS and Cloud
	Fulfillment	Contract fulfillment in Cloud is more tightly integrated to Purchasing and can more easily create purchase orders with less configuration
Amendments	Amendments	Comparable functionality between EBS and Cloud
Deviations	Deviations	Improved process flow for highlighting deviations from standard contract clauses and routing these deviations for approval
Validation	Validation	Comparable functionality between EBS and Cloud
	Resource Workload	Improved features to view resources assigned to contracts and manage workload
Layouts	Layouts	Layouts created in BI Publisher are easier to modify and deploy

iSupplier/Supplier Portal

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Supplier Registration	Supplier Registration	Comparable functionality between EBS and Cloud; improved approval routing
UI	UI	UI is more easily configured to support presenting the information that is desired
Search	Search	Dynamic search capabilities across all supplier portal objects
Transaction Processing	Transaction Processing	Transaction processing capabilities are similar between EBS and Cloud
Change Approval Routing	Change Approval Routing	Approval routings can be configured to support routing to specific users

Sourcing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Quotations	Negotiations	All quoting in Cloud has been moved into the sourcing module as a Negotiation
Negotiation	Negotiation	Comparable functionality between EBS and Cloud, some guided logic for creating the negotiation
RFI/RFQ/Auction	RFI/RFQ/Auction	Comparable functionality between EBS and Cloud
Collaboration Teams	Collaboration Teams	Comparable functionality between EBS and Cloud
	Integration with Project Management	Sourcing in Cloud comes pre-integrated with project management for project plan tracking
Scoring	Scoring	Comparable functionality between EBS and Cloud
Negotiation Lifecycle	Negotiation Lifecycle	Improved UI for tracking and monitoring negotiations; live negotiations
Response	Response	Improved UI for monitoring and reviewing responses
Award	Award	Comparable functionality between EBS and Cloud

Supplier Qualification

EBS Concept	Cloud Concept	Comments on Cloud Functionality
	Supplier Qualification	Greatly enhanced features on the supplier qualification model, where EBS only held classifications info. Cloud allows the supplier users, as well as the supplier management resources, to maintain questions to capture information from a supplier. The responses can be scored and evaluated. The qualifications can be resubmitted to the supplier once they expire, with full integration to the supplier portal. The qualification process can also be integrated with the supplier registration process.

Projects

Project Costing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Work Breakdown Structure	Work Breakdown Structure	Improved UI to enter and maintain project work breakdown structure and tasks
Forecasts	Forecasts	Significantly improved forecast process, including better EAC calculations based on actuals
Budgets	Budgets	Significantly improved budgetary process
Capitalization	Capitalization	Capital project flow and integration with assets is improved
Time and Labor	Time and Labor	Comparable functionality between EBS and Cloud
Rates Processing	Rates Processing	Comparable functionality between EBS and Cloud
Burdening	Burdening	Comparable functionality between EBS and Cloud
3 rd party Cost Import	3 rd party Cost Import	ADF DI loader programs and web services integration
Project Accounting	Project Accounting	Improved UI for subledger accounting, increased options for accounting logic
Cost Allocations	Cost Allocations	Comparable functionality between EBS and Cloud

Project Costing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Commitments	Commitments	Comparable functionality between EBS and Cloud
Supply Chain Costs	Supply Chain Costs	Order management orchestration can move all project-related shipments to projects vs AR
Transaction Controls	Transaction Controls	Comparable functionality between EBS and Cloud
Cost Adjustments	Cost Adjustments	Comparable functionality between EBS and Cloud
Expenditure Items	Expenditure Items	Comparable functionality between EBS and Cloud
Project performance	Project performance	Significantly improved metrics for project performance, including actual vs. forecast vs. budgetary analysis; infolets; predefined reports and on screen KPIs

Project Billing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Project Billing Setups	Project Contracts	Cloud has expanded the use of project contracts to separate the costing and billing configurations for a project, and also to allow multiple projects to fall under the same billing and revenue recognition rules.
Billing Transactions	Bill Plans	Bill plans allow the user to create billing plans that use different methods (percent, amount, cost plus, event, etc.) and specify the frequency of the billing process. These bill plans can be associated with different lines in the contract. Certain billing extensions can be leveraged.
Revenue	Revenue Plans	Revenue plans allow the user to create revenue calculation methods and specify the timing of the revenue recognition. The revenue plans can be associated with the different lines in the contract. Certain revenue extensions can be leveraged.
Bill Presentment	Bill Presentment	Comparable functionality between EBS and Cloud
	Invoice Review	Invoices are generated in draft format and can be routed for review by the project manager (or other designated resources) prior to interfacing to AR
Billing Events	Billing Events	Comparable functionality between EBS and Cloud

Project Management/Planning and Control

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Microsoft Project Integration	Microsoft Project Integration	Comparable functionality between EBS and Cloud
ETC	ETC, EAC, Earned Value	Financial planning for projects is greatly improved, with significant metrics improvements leveraging task completion status, budget, forecast, and actuals data
Tasks	Tasks	Tasks and task assignment is similar between EBS and Cloud
KPIs	KPIs	Overall project financial and operations performance is greatly improved in Cloud, with better KPIs out of the box and the ability to create your own and add to the project dashboard for project managers to report on progress
	Mobile	Tasks can be tracked/updated via a mobile device
Change Orders	Change Orders	Comparable functionality between EBS and Cloud, with the ability to email out change order communication in Cloud
Issue Management	Issue Management	Comparable functionality between EBS and Cloud
Program Management	Program Management	Financial program reporting and views are greatly improved in Cloud
Status Reporting	Status Reporting	Status reporting is improved with more reports and visual tools in the UI

Project Resource Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Project Staffing	Project Staffing	Cloud provides the ability to import resources into a project
Resource Supply and Demand	Resource Supply and Demand	Improved capabilities around resource demand and supply entries, view qualifications, utilization, and analyze resource availability. Improved search capabilities in Cloud
Competency	Qualifications	Maintained in HCM on the employee record, improved UI for tracking and maintaining
Resource Schedule	Schedule Card	Improved visibility of the resource's availability and current work assignments
Staffing	Resource Request	Resource requests in Cloud can be routed for approvals
Assignments	Assignments	Resource assignment status is improved in Cloud with greater ability to status assignments and make adjustments to assignments. Assignments can be imported into the project
Utilizations	Utilizations	Resource actual hours can be imported. Projected, actual, and target utilization capabilities in Cloud.

Supply Chain

Install Base/Asset Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Install Base	Asset	Install base has changed to Assets in Cloud. Assets can be created to be full lifecycle (includes inventory transactions internal) or just customer-related (shipment to customer and location).
Order Management Workflow	Order Management Orchestration	Order management orchestration flows are built to support creating asset data upon shipment for asset-tracked items
Counters	Meters	Assets can have meters assigned to them for usage-based tracking information
End Customer Location	Location Types	Location of the asset can be Customer addresses, other external addresses, internal addresses, work centers (i.e. depots) or unknown
Serialization and Lot Control	Serialization and Lot Control	Comparable functionality between EBS and Cloud
RMAs	RMAs	Comparable functionality between EBS and Cloud
Sales Order Details	Sales Order Details	Comparable functionality between EBS and Cloud
Transaction History		EBS transaction history is more robust than what is available in Cloud
Configuration	Hierarchy	Graphical hierarchy exists in Cloud
	360 Degree View	Cloud provides a 360 degree view for Assets, linking them to service requests, opportunities, leads, sales orders, field service orders, work orders, etc.

Configurator

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Configurator	CPQ Cloud	Oracle Configurator has been replaced by CPQ Cloud (the former BigMachines product). There does exist the concept of a simple configurator in Order Management, similar to what was available in EBS.
Guided Selling	Guided Selling	Guided selling, and configuration maintenance, is greatly simplified in CPQ Cloud vs. EBS
	Subscription ordering	CPQ Cloud offers full support for subscription ordering

Quoting

EBS Concept	Cloud Concept	Comments on Cloud Functionality
HTML Quoting	CPQ Cloud	Quotes are generated in CPQ Cloud and integrated to Order Management or Subscription Contracts
	Salesforce Integration	CPQ Cloud easily integrates into Salesforce for seamless quote processing
Quote Templates	Document Designer	CPQ Cloud offers support for quote templates, SOWs, proposals, contracts, engineering documents, and data sheets. HTML Quoting quote and proposal template tools are relatively simple compared to CPQ Cloud. Embedded multi-language support, as well as support for HTML, PDF, Word, and RTF output formats
	Contract Management	Contracts can be created and routed for approval, including to the customer
	E-Signature Integration	Integration with most e-signature providers (DocuSign, etc.)
	Subscription Quoting	Full support for a subscription model and quoting needs

Order Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Sales Orders	Sales Orders	Sales order header and lines have a refreshed UI in Cloud, with improved visibility for statuses, downstream activities, and associated documents such as purchase orders and shipments
	Validation	Sales orders are validated for errors prior to submitting for booking
Approvals	Approvals	Sales orders can be routed for approval, with improved configuration abilities for rule generation
Sales Credits	Sales Credits	Comparable functionality between EBS and Cloud
Sales Agreements	Sales Agreements	Comparable functionality between EBS and Cloud
Projects	Projects	Significantly improved integrations between Order Management and Projects, including support to tie project details to sales orders lines and have that project drive cost accounting and cost allocation to the project upon shipment
Coverage/Warranty	Coverage/Warranty	Comparable functionality between EBS and Cloud
Subscriptions	Subscriptions	Improved subscription design in Cloud over EBS 12.2+
	Mass Order Line Update	Ability to change the same attribute on multiple order lines at once
Order Import	Order Import	Ability to create sales orders from a spreadsheet in Cloud
Credit Check	Credit Check	Comparable functionality between EBS and Cloud

Order Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Order Types	Order Types	Order types in Cloud help to organize and classify orders, but drive much less of the order processing than in EBS
Order Organizer	Order Management Dashboard	The order management homepage includes a series of graphical reports that show orders on hold, orders in jeopardy, orders with errors, and other data that helps to address specific issues
Sales Order Acknowledgements	Sales Order Documents	Ability to email documents directly from the sales order screen to the contact
Line Types	Line Orchestration	Cloud leverages orchestration rules vs. order line workflow to drive the process used to process the sales order. Allows for greater control over when transactions are processed, notifications to be sent, customer approval, integration to other systems, etc..
	Jeopardy	Cloud introduces a concept of jeopardy, where the order lines are classified and flagged based on scheduled dates being missed or issues with potential delay. Increases visibility into the order lines that require attention
Holds	Holds	Comparable functionality between EBS and Cloud
ATP	Global Order Promising	Cloud offers improved integration with the Cloud Planning applications to support GOP
Drop Shipment/Back to Back orders	Drop Shipment/Back to Back orders	Improved visibility of the drop shipment requisition/PO from the order screen; ability to override the drop shipment supplier

Pricing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Price Lists	Price Lists	Comparable functionality between EBS and Cloud
Pricing Overrides	Pricing Overrides	Comparable functionality between EBS and Cloud; tied to a pricing strategy
	Cost Lists	Cloud has the concept of a cost list that is used for margin calculations.
Modifiers	Discount Lists	Ability to setup pre-defined amount or percentage based discounts and surcharges
	Returns Price List	Cloud has a concept of a separate price list for returns and RMAs
Qualifiers	Pricing Strategies	Cloud introduces the concept of a pricing strategy, which ties together the price lists, return price lists, cost lists, discount lists, and currency conversion lists for use with specific customer grouping. These pricing strategies tie back to shipping charges that can be associated to specific items.
	Pricing Strategy Assignments	Pricing strategies can be assigned to specific business units, customer pricing segment, channel, order type
	Customer Pricing Profiles	Customers can be grouped into a pricing profile that can be used to point to a pricing strategy
Formulas	Algorithms	Cloud offers greater extensibility to use formulas and algorithms to calculate pricing and price breaks

Shipping

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Warehouse	Warehouse	Comparable functionality between EBS and Cloud
Ship Sets	Ship Sets	Comparable functionality between EBS and Cloud
Shipping Tolerances	Shipping Tolerances	Comparable functionality between EBS and Cloud
	Fulfillment	Cloud leverages fulfillment lines, which are processed out of inventory management. Greater flexibility for what the fulfillment line does with transactions, pauses, notifications, etc.
Shipping Documents	Shipping Documents	All shipping documents are created and maintained in BI Publisher for easier modification and deployment
Pick Waves	Pick Waves	Comparable functionality between EBS and Cloud
Pick Release Rules	Pick Release Rules	Comparable functionality between EBS and Cloud; can pick release via project and task
Packing Orders	Packing Orders	Comparable functionality between EBS and Cloud
Shipping Charges	Shipping Changes	Improved shipping charge functionality in Cloud
	E-Signature	Shipments can be routed for e-Signature
Shipping Exceptions	Shipping Exceptions	Cloud offers some improved flexibility in creating and managing shipping exceptions to ensure visibility into issues

Inventory

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Master Items	Master Items	Improved UI for item entry, with similar concepts for attributes and templates. Bills of Material is renamed to Work Definitions and is included on the item form as a tab
On-Hand Inventory	Item Quantities	Comparable functionality between EBS and Cloud
Transactions	Transactions	Comparable functionality between EBS and Cloud – subinventory transfers, miscellaneous, interorg, move orders, reservations, picks, transfer orders
Cycle Counts	Cycle Counts	Comparable functionality between EBS and Cloud
Physical Inventory	Physical Inventory	Comparable functionality between EBS and Cloud
Consigned Inventory	Consigned Inventory	Cloud leverages consumption advice and some improved reporting for consigned inventory
Pending Transactions	Pending Transactions	ADF DI-enabled pending transaction management via spreadsheets make it easier to resolve any pending transaction issues
Integrations	Integrations	Central integration platform to support receiving, shipping, inventory management transactions

Mobile Supply Chain

EBS Concept	Cloud Concept	Comments on Cloud Functionality
MSCA	3 rd party applications	Oracle does not have a native mobile supply chain application to support using a mobile device to perform inventory transactions. Instead, Oracle has partnered with RF Smart (www.rfsmart.com) to support inventory transactions, including: • Transfer orders • Cycle counts • Inventory inquiry • Receipt, including inspection • Inter/Intra Org transfers • Packing • Physical inventory • Picking • Ship Confirm • Work Order creation, execution, issue materials RF Smart also includes label printing capabilities

Discrete and Process Manufacturing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Discrete and Process Manufacturing	Manufacturing	Cloud combines both Discrete and Process manufacturing into one module called Manufacturing. Plants are setup with parameters that drive whether process manufacturing attributes are enabled and can be leveraged during the production process. There is also support for mixed mode (process + discrete) manufacturing steps
Work Orders	Work Orders	Cloud provides a significant UI upgrade for processing work orders in graphical methods
Work Order Processing	Work Execution	The work execution work area contains multiple infolets (reports) that show details around work order, execution, exception, inspection details for the management of activity
Work Order Issues	Dispatch List	One common screen to perform all work order processing, including operation and material transactions, inspections, printing work order travelers and labels
Product Genealogy	Product Genealogy	Improved graphical capabilities for tracking and tracing product genealogy
	IoT	Products and manufacturing processes are IoT enabled
E-Signature	E-Signature	Comparable functionality between EBS and Cloud
Resources	Resources	Comparable functionality between EBS and Cloud
Outside Processing	Outside Processing	Outside processing is more tightly integrated into the manufacturing process and the UI provides greater visibility for the status of the outside process

Project Manufacturing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Sales Orders	Sales Orders	Cloud has built a direct connection between sales order processing and projects. Shipments are now tied to projects and the costs associated with those shipments integrate to the project
Inventory Transactions	Inventory Transactions	Comparable functionality between EBS and Cloud
Work Orders	Work Orders	Comparable functionality between EBS and Cloud
Procurement	Procurement	Comparable functionality between EBS and Cloud
Subledger Accounting	Subledger Accounting	Subledger accounting offers a bit more flexibility in cloud for specific account build conditions
Costing	Costing	Costing model has changed in Cloud to allow more flexibility for cost transaction processing, and works in conjunction with project accounting to improve the ways that costed transactions can get onto the project

Costing

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Inventory Organizations	Cost Organizations	Costing in Cloud has migrated to the concept of cost organizations and cost books, which are above the inventory organization level. Inventory transactions hit one or more cost books, some of which can be used for transfer of the costs to the GL; others can be used to model out specific cost scenarios that are used for analysis and reporting but not financial transactions
	Cost Scenarios	Costs can be processed using a variety of scenarios to calculate costs, including different costing methods. The costs calculated from these scenarios can be published to the transaction to move to the GL
Cost Entry	Cost Entry	Standard costs can be entered via an ADFDI spreadsheet to update the costs in the system
Project costing	Project costing	Tight integration between costing and projects to support improved costing calculations
Landed Cost Management	Landed Cost Management	Comparable functionality between EBS and Cloud
	Cost of Goods Sold/Revenue Recognition	Using the integration to revenue management or directly from AR, the revenue and cost transactions can synch up and be recognized at the same time
Costing Methods	Costing Methods	Cloud includes Standard, Perpetual Average, and Actual Costs

Quality

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Attributes	Quality Inspection Characteristics	Cloud provides the ability to create unlimited “characteristics” which are item or non-item based
	Inspection Levels	Cloud provides the ability to specify the frequency at which an inspection needs to be done
Inspection Plans	Inspection Plans	Improved UI for inspection plan entry
Actions	Action Rules	Comparable functionality between EBS and Cloud
Skip Lot and Sampling	Skip Lot and Sampling	Comparable functionality between EBS and Cloud
eSignature	eSignature	Comparable functionality between EBS and Cloud
Issues and Actions	Issues and Actions	Quality Management work area includes infolets to much more easily drill down into open work items related to Quality issues. Non-conformances are logged as issues, actions are tracked such as CAPA, Failure Analysis. Each issue and action can be tied to specific master data and transactions, and can directly tie to change orders.
Workflow	Workflow	Workflow has been greatly enhanced in Cloud, allowing for better management of quality issues and actions and improved status tracking
Reporting	Reporting	Reporting is greatly improved in Cloud, and the user can create ad-hoc reports, leverage infolets to see status quickly, and click into the quality issue and action directly from the report

Supply Chain Planning

EBS Concept	Cloud Concept	Comments on Cloud Functionality
ASCP/MRP	Planning Central	Cloud planning capabilities are developed based on the best practices of Demantra.
	Planning Dashboard	A graphical UI serves as the home page for the planning process, which helps to narrow down specific items that require some attention based on supply and demand requirements. The layout can be modified to support the desired content.
Data Collections	Data Collections	Comparable functionality between EBS and Cloud
Planning Exceptions	Planning Exceptions	Comparable functionality between EBS and Cloud
Drop Shipments	Drop Shipments	Cloud provides enhanced capabilities to support drop shipment planning calculations and sourcing rules
	New Product Forecasting	Cloud provides the ability to forecast new products by comparing to an existing product and making assumptions about increases or decreases in projected demand
Simulations	Simulations	Comparable functionality between EBS and Cloud

Collaborative Planning

EBS Concept	Cloud Concept	Comments on Cloud Functionality
	Supply Chain Collaboration	Cloud provides a supply chain collaboration planning mechanism to connect suppliers, contract manufacturers, and for vendor managed inventory.
	Forecast Consumption	Suppliers can consume the supply plan via the supplier portal or leveraging the B2B Messaging platform
VMI	VMI	Suppliers can view and manage vendor-managed inventory via the supplier portal or the messaging platform
	Contract Manufacturer Collaboration	Contract manufacturers can work through open purchase orders and submit production reports that directly update manufacturing jobs and material usage. Supplier Portal or B2B messaging can be leveraged to support these tasks.

Demand Planning

EBS Concept	Cloud Concept	Comments on Cloud Functionality
	Demand Management Dashboard	A graphical UI serves as the home page for the demand planning process, which helps to narrow down specific items that require some attention based on supply and demand requirements. The layout can be modified to support the desired content.
	Casual Factors	Allows the user to update trends, price, holidays, etc. to modify the historical demand forecast
	Segmentation	Group items to be planned to support volatility, volume, cost, and other user-defined attributes
	Demand Data	Ability to import demand data from a variety of external systems, as well as internal Cloud systems
	Forecasting methods	Support the following forecasting methods: • Holt • Regression • Transformation Model (Log) • Regression for Intermittent • Croston for Intermittent • Modified Ridge Regression

AI/Machine Learning

EBS Concept	Cloud Concept	Comments on Cloud Functionality
	Artificial Intelligence	Cloud offers the ability to leverage AI Apps for the following areas: Supplier Categorization Intelligent Payment discounts Data Acquisition and Storage from machines with sensor-enabled equipment Data contextualization for combining machine and transactional data Predictive modeling and analysis of KPI data such as yield, quality, cycle time, scrap and rework Pattern and Correlations analysis on KPI data Genealogy and Traceability Analysis

Transportation Management (OTM)

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Integration into OM	OTM Integrates with Order Management.	Cloud has in built services for Transportation Planning which can be added into OM Orchestration. Using Integration Layer and OCI this can be send to OTM.
	OTM Integrates with Purchasing	Allow to integrate with Purchase Order to Plan for transportation to get material from Supplier
	OTM Integrates with Landed Costing	Allow to integrate with Landed Costing and Capture estimates cost based on carrier Freight estimate
	OTM Integrates with PC Miler	Allow OTM to integrate with PC Miler to get Actual distance and to plan
	OTM Integrates with Fourkites	Allow OTM to integrate with Fourkites for Shipment Tracking and update Back ERP with actual status.
Planned Shipments	Transportation Planning	Transportation Planning based on Source (Warehouse) to destination (Customer Ship to Address), Weight, Dimension.
Freight Tendering	Shipment Tender	Allows to integrate with Carrier and accept tendering of planned shipment
	Business Intelligence	Allows to built BI reports
	Freight Billing And Creating AP Invoice in ERP	Allow to Enter Voucher based on Carrier Invoice and can be integrated to AP Invoice in ERP using Web Services.

Global Trade Management (GTM)

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Sales Order Compliance Hold	Sales Order Screening	Cloud has order header status to indicate that 'Trade Compliance Screening Is Pending'. Trade Compliance Screening status at order header line levels to indicate compliance details for 'Restricted Party', 'Sanctioned Country or Territory' & 'Trade Control' Standard functionality to prevent order booking when screening fails. Built in web services for integration between Oracle Cloud Order Management and OTM.
Sales Order Line Holds	Sales Order Shipment Screening	Cloud has standard functionality to initiate shipment screening. Additional attributes at the shipment lines level to capture screening results. Standard functionality to prevent ship confirm transaction when shipment line is pending trade compliance screening. Build in web services for integration between Oracle Cloud Order Management and OTM.

Warehouse Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Inbound Logistics	Inbound Logistics	Comparable functionality between EBS and Cloud
Inventory Storage and Facility Management	Inventory Storage and Facility Management	Comparable functionality between EBS and Cloud
Outbound Logistics	Outbound Logistics	Comparable functionality between EBS and Cloud
Reverse Logistics	Reverse Logistics	Comparable functionality between EBS and Cloud
Warehouse Configuration	Warehouse Configuration	Comparable functionality between EBS and Cloud
Container and LPN Management	Container and LPN Management	Comparable functionality between EBS and Cloud
WMS Rules Engine	WMS Rules Engine	Comparable functionality between EBS and Cloud
Labeling	Labeling	Comparable functionality between EBS and Cloud
	Parent Child Company Hierarchy	Allows 3PL's to view and manage their clients inventory differently
	Trailer UI	Allows configuration and location of trailers in the yard
	Appointments	Allows the tacking of metrics with the use of ASN's for planned vs actual arrival times
	Sort and Receive	Allows to quickly fulfill direct orders for customers

Human Capital Management

Core HCM and Self Service

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Mobile Enabled	Mobile Enabled	Mobile optimized webpages and mobile apps are available.
Special Information Types & Extra Information Types	Extensible Flexfields	Provides both ability to hold country-specific legislative information, custom information by role and any custom information fields that also require multiple rows to be added.
Document of Records	Document of Records	Ability to store documents and related data for legislative requirements and customer specific needs.
N/A	Offboarding Checklists	Tasks assigned to various groups to support termination activities
N/A	Auto-assignment of Security Roles	Automatic or default assignment of security roles based on employee's eligibility
N/A	Active Directory Integration	Integration with Microsoft Active Directory to support Oracle user accounts management.
Standard Reporting for Audit and Legislative Requirements	Standard Reporting for Audit and Legislative Requirements	Statutory reporting to support any legislation utilized for employees
N/A	Matrix Manager capability	Allows for definition of additional manager relationships beyond the standard line manager.
N/A	Areas of Responsibilities	Defined groupings that can determine workflows, security/access and checklists
N/A	Support for business titles	Standard field to capture "business" titles that are different than the assigned job.
NA/	External Identifiers	Standard support for ID's for external applications

Time and Labor

EBS Concept	Cloud Concept	Comments on Cloud Functionality
N/A	Web Clock	Time clock that can be used by either mobile and standard browser access.
Time Calculation Rules and Time Entry Rules	Time Calculation Rules and Time Entry Rules	Allows custom definition for eligibility and calculation of time entries.
Integration with Absence Management and Payroll	Integration with Absence Management and Payroll	Allows for the management of absences and payroll with relation to time.
Integration with Third Party Physical Devices	Integration with Third Party Physical Devices	Integration with various third party physical devices and time cards are supported.
Holiday Calendar	Calendar Events	Allows for the definition of default holidays and company events.
Preferences	Time Processing and Time Entry Profiles	Determines the timecard layout and processing rules assigned to an employee.

Recruitment

EBS Concept	Cloud Concept	Comments on Cloud Functionality
N/A	Onboarding Checklists	Provides tasks for employees and support staff based on employee eligibility
N/A	Pending Worker person type	A post-hire status for candidates have accepted an offer, but not yet reached hire date.
N/A	Standard integrations	LinkedIn, Indeed and various background check vendors
Resume Parsing	Resume Parsing	Populates information from candidates resume (education, experience, etc..) – Requires third party vendor.
N/A	Profile integration with Requisition	Pulls job descriptions, sills and competencies from jobs into new requisitions for that job.
N/A	Campaigns	Provides ability to activity seek candidates for non-specified jobs. Supports candidates from a job fairs to quickly enter application.
Job requisition templates	Job requisition templates	Standard requisition templates based on job being recruited.
Agency Hiring and Portal	Agency Hiring and Portal	Special access for third party agencies and recruiters to manage requisitions, candidates and hiring activities.
N/A	Archived candidate searches	Supports federal requirements to provide details on candidates searches (OFCCP reporting).
N/A	Social Sourcing	Candidate sourcing through social media outlets and with activities and candidate data managed with Oracle Recruiting Cloud

Compensation

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Fast Formulas	Fast Formulas	Provides ability to build custom compensation eligibility and calculations
Total Compensation Statement	Total Compensation Statements	Standard compensation statements that can easily be modified to fit customer's requirement.
Integration with Oracle Performance Management and Goal Management	Integration with Oracle Performance Management and Goal Management	Employee compensation plans can be built to include elements from their performance management plans including goals.
	Individual compensation	Managers can provide specific bonuses and/or increases outside normal compensation cycle

Benefits

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Life Events	Live Events	The definition of life event events that initiate the addition or change of benefits plans and or dependents and beneficiaries
ACA Support	ACA Support	All available support to store data for employees and provide statutory reporting for the Affordable Care Act including
Standard Benefits Confirmation Statement	Standard Benefits Confirmation Statement	Standard benefits compensation statements that can be customized to meet individual custom requirements.
Support to create HIPAA 834 format files	Support to create HIPAA 834 format files	Ability to a functional user to create benefits extracts and vendor files in federally mandated HIPAA 834 format.
Open Enrollment Support	Open Enrollment Support	All features required to support Open Enrollment.

Learning

EBS Concept	Cloud Concept	Comments on Cloud Functionality
N/A	Mobile learning	• Learn anywhere, anytime on your chosen device • Download content for offline access • iOS, Android smartphone and tablet apps
N/A	Personalized learning recommendations	Drives employee engagement and upskilling efforts across the organization
N/A	Social learning tools	Peer-to-peer created and shareable learning
N/A	Conversational experience via a digital assistant	Gives users the ability to get to their learning quickly through voice or text alone
Custom alerts	Automated assignments	Allows for the assignment of certification and compliance courses based on defined criteria
Manager Self-Service featuring Learning	Coaching and mentoring	Track learning activities for the team through • My Team dashboard • Manage team and individual assignments and goals • Identify and reward subject matter experts for sharing their insight and content
Certification and compliance	Certification and compliance	• Easily design your own certifications that are valid for pre-defined periods of time • Support a variety of compliance scenarios that might require recertification

Succession Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Custom Alerts	Succession Plan Alerts	Notifications that can be defined to information HR that an employee has become a match or when a candidate moves into an incumbent's role.
Talent Pools	Talent Pools	Allows HR to see employees or candidates that may fit roles based on skills sets assigned to the talent pool.
Succession Plan Best Fits	Succession Plan Best Fits	Identifies employees or candidates that are the best fit for specific jobs or roles based on competencies and skills and ratings.
N/A	Development Plan	Employee or manager can request HR provided development paths or create custom development paths.

Talent Management

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Integration with Compensation Workbench	Integration with Cloud Workforce Compensation	Allows integration of performance management and goals into compensation plans.
N/A	Profile Management integration with Recruiting Cloud, Learning, Performance & Goal Management	Competencies, Skills and other elements for an employee's profile or the employee's job profile can be synchronized with associated Recruiting requisitions, Performance & Goals plans and Learning profiles.
Standard Talent Reporting	Standard Talent Reporting	Including 9-Box reporting and other reports that compare employees and job profile analysis. Employees with competencies, with related reporting.
Goal Setting & Appraisals	Goal Management	Allows for the assignment and approval of employees goals by employee or manager
N/A	Anytime Performance Documents	Ad Hoc performance documents. Allow an employee or manager to initiate a specific performance document at anytime.

Service and Contracts

Service Contracts

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Service Contracts	Enterprise Contracts -> Service Contracts	Automatically track included warranties of covered assets upon the sale of goods and services. Specify one-time, recurring, or usage charges. Enter billing attributes and review the billing schedule for both one-time and recurring charges. Track coverage entitlements on intangible or tangible goods. For example, software or hardware. Process service renewals based on pre-defined renewal rules.
Subscription Contracts	Subscription Management	Provides a complete solution to sell subscriptions, services, and usage-based products that include tangible/intangible items, such as periodic copier ink delivery, or intangible items, such as complex usage-based software subscriptions on a recurring basis e.g. Software Subscription - SaaS. Billing could be one-time or recurring.
Service Lines	Contract Lines	Contract lines to specify what you are selling – Service Inventory Items, Free Form (Non Inventory Items) like consulting service or Coverage Lines - Services that are provided on covered assets, such as maintenance
Subscription Lines	Subscription Lines	Recurring sale of items associated with the service contract over a period of time, such as backup services
Usage Lines	Usage-Based Subscriptions	Usage-based subscriptions let you bill your customers based on usage charges. Usage charges are set up in the Oracle Fusion Pricing application and then are available on subscription items.

Service Contracts

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Quality Assurance	Authoring, Validating and Submitting Contract for Approval	A contract typically moves through a variety of states throughout its life cycle, from initial drafting to negotiation to active management and eventually to contract closeout. Contract validation performs a series of checks that determine if your contract can be submitted for approval. You must correct all errors. Fixing the warnings is optional. You can validate your contract at any time during contract authoring by selecting the Validate Contract action. The same validation is performed automatically when you submit the contract for approval.
Quoting	CPQ (Configure, Price, and Quote) Cloud	Service Contracts integrates with an external OM (Order Management) and CPQ (Configure, Price, and Quote) Cloud.
Billing	Service Contract Billing	For service contracts, you can create billing templates with billing attributes. You can apply these templates to new and renewed contracts based on various criteria. The billing frequency - Year, Month, or Day - is chosen during the billing template creation. Upon creation of billing attributes of the subscription and coverage lines, the billing information is then sent to Account Receivables (AR)
Contract Life Cycle- Quote, Negotiate, Create, Terminate	Contract Life Cycle- Draft, Negotiate, Create, Closeout	A contract typically moves through a variety of states throughout its life cycle, from initial drafting to negotiation to active management and eventually to contract closeout. A contract status indicates where a contract is in its life cycle, and also determines what actions and operations are permitted for the contract.
Coverage Templates	Coverage Templates	Contracts simplifies the process by allowing contract administrators to maintain a central library of standard clauses, contract templates, and policy rules across the enterprise. Contract templates enable rapid assembly and creation of contracts by providing standard contract boilerplate language for each type of sale or procurement. Policy rules specify which clauses are mandatory for a contract or protected against updates during negotiation.

Field Service

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Administration Portal	FS Core Manage	Oracle Field Service Cloud Core Application combines the features of Oracle Field Service Core Manage Cloud Service and Oracle Field Service Mobility Cloud Service. Oracle Field Service Core Manage Cloud Service includes the functionality for Dispatchers, Managers, and Administrators and Oracle Field Service Mobility Cloud Service includes the functionality for Field Resources.
Advanced Scheduler Options	FS Routing	Routing automates many routing tasks, making the process faster and easier and ensures that properly skilled resources are assigned activities within their working areas. Routing satisfies more customer activities within the promised service window. It minimizes the cost of delivering service by minimizing resource travel time, work time, idle time and overtime. Oracle Field Service Routing leverages a sophisticated algorithm to optimize resource utilization. It learns about your resources and activities through the information you enter and through the real-time data that it collects about resources and activities. The application then uses this information to generate routes that optimize the mobile workforce utilization details.
Debrief	Service Logistics	Technicians report time, expense, and service parts they install or recover from the site. They can also report additional notes describing how the problem was resolved. Technicians can create follow-up tasks or new service requests if, for example, the problem was not resolved during this visit, or additional service issues are discovered
Dispatch Center	FS Core Module - Dispatch	Dispatch Console to monitor the field and assign activities to technicians.
Mobile and Wireless Options	Mobility Cloud	Oracle Field Service Mobility Cloud Service to communicate with dispatch and management throughout the course of your day using a device such as a tablet, smart phone, or laptop. The Mobility Landing page (resource base screen) provides useful information about a resource like the activity details, route, etc..

Field Service

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Preventative Maintenance	Preventative Maintenance	Maintenance Cloud supports both Calendar Based and Meter Based Maintenance Programs that calculate the preventive maintenance forecast and create work orders.
Spare Management	Field Parts Inventory	Use the Manage Field Parts Inventory page to manage field parts inventory in manned, unmanned and site-dedicated parts stocking locations, as well as in technician trunk stocking locations. As a field service administrator, you can Transfer parts to stocking locations (subinventories) Return defective, unused, and excess parts back to the central or regional warehouse. As a field service technician, you Transfer and return parts to subinventories assigned to you.
Technician Portal	Mobile Cloud	Field managers and resources can search the Parts Catalog for inventory that is required for installation, maintenance, or repair jobs. When you install or uninstall inventory, you move items from your resource pool to the customer pool, and vice versa. When inventory has been installed and specifically configured, you can send certain information to it using a service request. The search function in Mobility allows you to search inventory in the Parts Catalog, as well as in all other inventory pools. Teamwork is a feature that enables a mobile employee or group of mobile employees to assist each other either on a single job or on an on-going basis. Some companies use teamwork to assign a trainee to work with a more experienced technician. Others use teamwork to assign a van to a technician.

Depot Repair

EBS Concept	Cloud Concept	Comments on Cloud Functionality
Customer Management	Oracle B2B Service	Contains information to help service managers, service personnel, and other service end users to perform day-to-day business tasks using Oracle B2B Service. Communication Channels - Manage the channels you use to communicate with customers, configure each channel, and manage the Omni channel toolbar and assignment rules.
Repair Workbench	Depot Repair Workbench	Use the Depot Repair functionality to repair and return broken and serviceable customer products and parts.
SR Management	Service Request	Customer sends email to create SR. Agent can create SR manually using Create SR button. Customer can create SR using Digital Customer Service Portal. REST APIs available to create SR.
Knowledge Management	Oracle CX Service Using Knowledge Management	Describes how administrators, agents, authors, and other knowledge base contributors can implement and use Knowledge in Oracle B2B Service. You can use Knowledge to help solve service requests by finding articles that are relevant to the service issue, linking those articles to the request, and sending the helpful information to the customer. When you open the Knowledge pane in a service request, you immediately get recommended articles based on the request's title, products, and categories. If the recommended articles don't resolve the issue, you can search for more articles until you find the content that you need.
Repair Processing	RMA, Depot Repair and MWO	1. Create SR, RMA and Shipment Sales Order. 2. Receive RMA in Inventory. 3. Create Repair Order in DR WB. 4. Execute RO in Maintenance Cloud. 5. Charges and Debrief in DR WB. 6. Ship repaired product using OM and Shipping.
Repair Resolution Management	Service Logistics – Depot Repair – Maintenance Cloud	Maintenance Work Order (MWO) or Rework WO
Internal Repairs	Rework Work Order in Oracle Manufacturing or Maintenance Work Order	Rework is typically done when there is some defect identified with the manufactured item, and repair work can fix the issue. Rectifying the defect can be removing a defective component and replacing it.
		© 2020 Apps Associates LLC - Company Confidential
