## AI Agent Studio – 25D Pre-Built Templates

### CX (Customer Experience) Agents:

| Product                | Agent Name                         | Description                                                                                                                                                                                                                                                                                                                                 |
|------------------------|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| CONTRACTS              | Contract Summarization Agent       | The contract summarization agent generates concise summaries of lengthy contract documents based on predefined prompts. It provides comprehensive overviews, enabling you to grasp key elements quickly and efficiently. You can also tailor prompts to highlight specific aspects or generate different summaries for various departments. |
| CPQ_COMMERCE           | CPQ Administrator Assistant        | CPQ Administrator Assistant assists CPQ administrators with product setup, rule creation, and configuration best practices using uploaded documentation.                                                                                                                                                                                    |
| CPQ_COMMERCE           | Quote Advisor                      | An agent that helps answer user queries related to CPQ quotes, pricing, and product configuration.                                                                                                                                                                                                                                          |
| INCENTIVE_COMPENSATION | Incentive Administration Assistant | An Administrator focused agent that helps users manage the Incentive Compensation Application                                                                                                                                                                                                                                               |
| INCENTIVE_COMPENSATION | Incentive Payee Advisor            | An agent that assists with answering incentive compensation questions based on company policies, frequently asked questions, and other provided documentation.                                                                                                                                                                              |
| SALES_FORCE_AUTOMATION | Account Advisor Agent Team         | An advisor that helps sales representatives understand the account better based on Account data and other related data.                                                                                                                                                                                                                     |

## Oracle AI Agent Studio – 25D Pre-Built AI Agent Templates

|                        |                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------------------|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SALES_FORCE_AUTOMATION | Deal Advisor Agent Team | The Deal Advisor Agent Team proactively identifies, analyzes, and prioritizes sales opportunities by leveraging advanced AI to synthesize vast amounts of market, customer, and internal data. It delivers actionable insights to sales teams, enhancing conversion rates and accelerating revenue growth.                                                                                                                                                       |
| SALES_FORCE_AUTOMATION | Express Reports         | An AI-powered agent that simplifies reporting within the Express Reporting Tool. By interpreting user intent from natural language queries or descriptions (e.g., Opportunities by Stage), it auto-generates complete reports with both tabular data and charts. Users no longer need to manually define report types, select filters, or configure groupings. The agent handles everything seamlessly, accelerating report creation and enhancing productivity. |
| SALES_FORCE_AUTOMATION | Lead Advisor Agent Team | Lead Advisor Agent Team is a focused AI-powered unit consisting of a single expert agent — the Lead Advisor Agent — dedicated to intelligently qualifying, prioritizing, and guiding lead management to drive faster, smarter sales outcomes.                                                                                                                                                                                                                    |
| SALES_FORCE_AUTOMATION | Sales Analyzer          | An AI-powered assistant integrated within the Sales Dashboard that transforms user-entered queries (e.g., Opportunities by Stage) into intelligent visualizations. Upon entering a prompt and selecting "Visualize", a drawer opens showing the generated chart with applied filters. Users can adjust basic visualization settings via the action menu. These AI-generated insights can be reviewed and saved to the catalog for future reference or sharing.   |

|                |                                             |                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|----------------|---------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SERVICE_CENTER | Case Analyzer Agent                         | The Case Analyzer Agent provides detailed insights and answers to questions strictly related to a specific case and its associated data.                                                                                                                                                                                                                                                                                                        |
| SERVICE_CENTER | Embedded Help                               | Workflow that initiates web application Question and Answer Support agent flow to generate an answer to the user query                                                                                                                                                                                                                                                                                                                          |
| SERVICE_CENTER | Ingest Similar Requests                     | Retrieve Resolved Service Request, validate and Ingest it to RAG system.                                                                                                                                                                                                                                                                                                                                                                        |
| SERVICE_CENTER | Notification Agent                          | Agent to extract data ,build payload and send notifications                                                                                                                                                                                                                                                                                                                                                                                     |
| SERVICE_CENTER | ProActive Support Ai Agent                  | The ProActive AI Agent is designed to intelligently analyze Service Requests (SRs) to identify recurring part failures and determine if proactive action is necessary. It follows a structured process using predefined tools to evaluate SRs, detect patterns, and confirm proactive action eligibility. If proactive action is justified, the agent initiates appropriate steps, including notifying impacted customers and creating new SRs. |
| SERVICE_CENTER | Service Request Creation Assistant          | Coordinates the end-to-end intake process of assembling a service request by validating the structured JSON payload, enriching it with relevant data, and preparing it for creation and downstream handling.                                                                                                                                                                                                                                    |
| SERVICE_CENTER | Service Request Escalation Prediction Agent | Workflow to predict the escalation of a service request.                                                                                                                                                                                                                                                                                                                                                                                        |
| SERVICE_CENTER | Service Request Resolution Assistant        | Service Request Resolution Assistant is responsible for generating resolution plan with troubleshooting steps for a given service request.                                                                                                                                                                                                                                                                                                      |

|----------|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| BENEFITS | Benefits Court Orders Agent | This AI agent empowers the benefits administrator to validate a specific employee's compliance on court order mandated dependent benefit coverage against the prevailing enrollments and dependent coverage in an accurate and actionable manner. Additionally, the agent can provide lucid information on the employee's court orders such as details of the contacts to be covered in specified plans, for the specified dates in addition to supporting general queries on court orders such as QMSCO or QDRO based on the documentation provided by US Government. It can also handle queries on how to manage and support court order compliance in benefits. |
| BENEFITS | Benefits Plan Advisor       | Benefits Plan Advisor is an expert AI agent in the Health Care Benefits domain, dedicated to helping employees compare eligible plans, estimate HSA, FSA, and Dependent Care FSA contributions, and navigate policy details. It delivers in-depth benefit plan information, answer policy or eligibility questions, and provide step-by-step guidance during open enrollment, new hire, or any benefits-related life event—ensuring compliance and informed decision-making at all times.                                                                                                                                                                          |
| BENEFITS | Benefits Policy Advisor     | The Benefits Policy Advisor quickly surfaces and interprets your company-specific benefits documents, distilling them into clear, actionable insights on eligibility, coverage, and compliance                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

|                  |                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------|------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ORDER_MANAGEMENT | Sales Promotions Advisor     | The Promotion Advisor is your smart assistant for making sure you get the best deals on your order. It helps you find and apply relevant promotions based on your order details, handles aggregation for discounts that require total quantity or amount across multiple lines or categories, and assists in searching for missing products to qualify for promotions. When there are multiple promotion options, I present them clearly and help you choose the best one. I also guide you through changes to payment terms or shipping methods to maximize your savings. I ensure all promotions are applied correctly, and if I need more information, I will ask you friendly, simple questions to keep things moving. |
| ORDER_MANAGEMENT | Sales Return Order Assistant | Our AI-assisted return assistant enhances customer service operations by automating the sales order return process. It intelligently retrieves order details, evaluates each item for return eligibility, and guides representatives through available return options. If an item is not eligible, clear messaging is provided. Upon selection of return preferences, the assistant seamlessly generates and presents the return order for final approval, ensuring speed, accuracy, and an improved customer experience.                                                                                                                                                                                                  |

|                    |                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|--------------------|-----------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRODUCT_MANAGEMENT | Component Replacement Assistant                     | This workflow agent automates component replacements in response to PCN/EOL notices. It extracts component details from the PCN notice document, suggests replacements using semantic search, and analyzes supply chain impact. The agent automatically creates change order with the replacement redlines, creates disposition change tasks, adds approvers based on a approval matrix document, and emails a summary to stakeholders automating the entire replacement process.                          |
| PRODUCT_MANAGEMENT | Manufacturer Onboarding And Risk Assessment Advisor | Our Manufacturer Onboarding And Risk Assessment Advisor provides the Design Engineer the information they need when entering the Manufacturer quality and certification requirements by simply asking questions. For example, questions can be about the quality certificates needed for compliance and the on-boarding steps. This eliminates the need to navigate to other webpages or download documents to get answers. Design Engineers can complete tasks faster resulting in a streamlined process. |
| PRODUCT_MANAGEMENT | Master Data Governance Standards Advisor            | Our Master Data Governance Standards Advisor enhances product governance and data quality by allowing Data Stewards and Product Manager to use AI to help validate adherence of product master data to the data governance and standardization policies enforced within your company. It can intelligently check item operational and extended attribute values for completeness and value accuracy.                                                                                                       |

|                    |                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRODUCT_MANAGEMENT | Product 360 Advisor                       | The Product 360 Advisor aggregates and presents a unified, real-time view of each product's key information, including current on-hand balances, open work orders, blanket purchase agreements, primary unit of measure, substitute items all from within the PLM Cloud interface. Users can search and explore this data with natural language queries for fast, actionable insights.                                                                                                         |
| PRODUCT_MANAGEMENT | Product Comparison Advisor                | Our Product Comparison Advisor provides Product Designers, Product Managers and Quality Engineers an intelligent and automated way to compare products. The AI advisor Standards answer any questions a user may have on these comparison results.                                                                                                                                                                                                                                             |
| PRODUCT_MANAGEMENT | Product Regulatory and Compliance Advisor | Our Product Regulatory and Compliance Standards Advisor provides Design Engineers, Product Managers and Supply Chain NPI Coordinators an intelligent and automated way to validate regulatory standards and compliance policies throughout a products lifecycle. The AI advisor Standards answer any questions a user may have on these regulations and standards in context of a specific item. It can validate the item operational and extended attribute values for regulatory compliance. |

|----------------------------|---------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| SUPPLY_CHAIN_ORCHESTRATION | Supply Disruptions Mitigator                            | Get real-time supply visibility and AI-driven decision support from an AI agent so you can proactively detect, assess, and mitigate supply disruptions.                                                                                                                                                                                                                                                                                                                    |
| SUPPLY_CHAIN_ORCHESTRATION | Supply Disruptions and Mitigation Agent                 | Supply Disruptions and Mitigation Agent find the supply disruption for duration provided by user and prioritize the disrupted Supply Request and Resolve the disruption with unreserved open supply or Available Sources source.                                                                                                                                                                                                                                           |
| SUPPLY_CHAIN_PLANNING      | Planning Advisor for Exceptions and Notes               | Our Supply Chain Planning Exceptions and Notes Advisor helps the users query and highlight potential issues related to exceptions generated by planning. It also helps planners query important planning assumptions and decisions documented as Notes for items in a plan                                                                                                                                                                                                 |
| SUPPLY_CHAIN_PLANNING      | Supply Chain Planning Process Advisor                   | This agent helps users answer questions about supply chain planning processes at their enterprise and can be used for personalized answers if the uploaded content includes such information                                                                                                                                                                                                                                                                               |
| SUPPLY_CHAIN_PLANNING      | Supply Chain Planning and Collaboration Process Advisor | Provides planners with answers to key questions such as their scope of responsibility, how to perform daily planning tasks including escalation processes based on enterprise policies and procedures. Also advises on supply chain collaboration policies that the enterprise has set for trading partners, such as commit horizon, under commit or over commit procedures, and other requirements. All responses are based on the content of the documents you uploaded. |

# Oracle AI Agent Studio – 25D Pre-Built AI Agent Templates

*Disclaimer: This is the full list of Agents. Oracle may add new Agents. It is recommended that check Oracle documentation for latest info.*
