

Automated Payment Integration with Bank Holiday Handling in Oracle

Transaction Calendar

is used to define valid business days for payment processing. It helps ensure that payments dates are not falling on weekends or holidays, which could cause delays or rejections from banks.

Overview:

We've implemented a robust solution using **standard Oracle functionality** to automate payment processing and ensure reliability even during bank holidays. This solution is reusable across other business units with minimal configuration

Key Components:

1. Payment File Integration

- Upon recording a payment in Oracle, the system automatically **generates and sends payment files to the bank**.
- This is done using Oracle's standard payment processing and transmission features.

2. PPR (Payment Process Request) Templates

- We've configured PPR templates to **select invoices for payment** based on predefined criteria.
- These templates are **scheduled to run at regular intervals**, ensuring timely payments.

3. Bank Holiday Issue

- If a PPR runs on a **bank holiday**, the payment fails due to non-processing by the bank.
- This was a critical issue affecting payment reliability.

4. Solution: Transaction Calendar

- We utilized Oracle's **Transaction Calendar** to mark **bank holidays**.
- The system now **automatically excludes bank holidays** as valid payment dates.
- This ensures that Payment Dates are not falling **on non-working days**, preventing failures

Benefits:

- **Standard Oracle Functionality** – No customizations, easy to maintain and support.
- **Automated & Reliable** – Reduces manual intervention and payment failures.
- **Compliance-Friendly** – Aligns with banking schedules and avoids processing errors.

Note: This functionality of Transaction Calendar will not work if payment is run manually from Payment > Submit Payment Process Request.

Steps to Use

- **Create Transaction Calander:**

Setup: Financials

When Initiate Payment Process Request job is scheduled or submitted the system will take into consideration the transaction calendar and generate payment date accordingly.

As 2nd Dec is marked as non-business day in Transaction Calendar the Payment job which is scheduled on that day has payment date of next working day which is 3rd Dec here.
