1. How to Identify the ledger for the procurement business unit.

Setup and Maintenance → Financial Offerings → Organization Structure → “Assign Business Unit Business Function”

Select the scope as the target business unit

Assign Business Functions: Vision Operations

Business Unit Functions
Select all business functions that this business unit will perform.

View ▼ Format ▼ Freeze Wrap

Name	Enabled
Receiving	☒
Expense Management	☒
Payables Invoicing	☒
Billing and Revenue Management	☒
Customer Payments	☒
Service Request Management	☒
Collections Management	☒
Materials Management	☒
Customer Contract Management	☒
Project Accounting	☒
Procurement	☒

Financial Reporting
Select the primary ledger and default legal entity for the business function you chose so that financial transactions can be generated.

*Primary Ledger: Vision Operations (USA)

Below legal entity: ☒ Below legal entity

*Legal Entity: Vision Operations

Look for Primary Ledger in the above screen shot.

2. How to identify the chart of accounts (COA) for the above ledger.

- Setup and Maintenance → Financial Offerings → Organization Structure → “Manage Primary Ledgers”
- Copy the ledger name from step-1 and search in the primary ledger field
- Chart of Accounts field shows the chart of account name for the respective ledger.

Manage Primary Ledgers

View ▼ Format ▼ Freeze Detach Wrap

Search: Vision Operations

Primary Ledger	Description	Chart of Accounts	Accounting Calendar	Currency	Balances Cube	Average Balances Cube	Status
Vision Operations (USA)	Vision Operations (USA) Set of Books	Operations Accounting Flex	AccountingMon1	USD			✓

Columns Hidden: 2

3. How to create a custom transaction accounting builder for the above chart of accounts (COA)

- Navigate to Setup and Maintenance → Global Search → Search for task → Define Transaction Accounting for Procurement → Manage Transaction Account Definitions
- There are two options to create a new Transaction account definition
Suggestion: - It is always recommended to create TAD from scratch using create option.

3	Source	Employee Charge Account

Rule 2: Conditions
 Enter a constant value and source directly, or select a source.
 Insert: [Source] [()] [AND] [OR] [Operator]
 "Cross BU" = N 'And' "Requisition Charge Account" "All" Is null 'And' "Destination Type Code"(PO,S,S) = EXPENSE 'And' "User Preferred Account" "All" Is not null

Below are Sample Rules and Conditions(Also, available in standard TAD account rules)

Value Type	Value	Conditions	Meaning
Source	Requisition Charge Account	"Cross BU" = N 'And' "Requisition Charge Account". "All" Is not null	Source - Requisition Charge Account. This condition usually gets applied when a requisition is getting converted into a purchase order. System checks if the valid charge account is present on requisition and same gets copied over Purchase order.
Source	User Preferred Account	"Cross BU" = N 'And' "Requisition Charge Account". "All" Is null 'And' "Destination Type Code"(PO,S,S) = EXPENSE 'And' "User Preferred Account". "All" Is not null	Source - Employee Charge Account. As per the condition system tries to pick the charge account from User's requisition preferences when destination type is expense.
Source	Employee Charge Account	"Cross BU" = N 'And' "Destination Type Code"(PO,S,S) = EXPENSE 'And' "Employee Charge Account". "All" Is not null	Source - Employee Charge Account. As per the condition system tries to pick the charge account from Requester's default expense account when the destination type is expense.

	Prio	* Value Type	* Value
1	Source	Requisition Charge Account	
2	Source	Employee Charge Account	
3	Source	User Preferred Account	
4	Source	Subinventory Expense Account	

Rule 4: Conditions

Enter a constant value and source directly, or select a source.

Insert Source () AND OR Operator ▼

"Subinventory Expense Account"."All" Is not null 'And' "Destination Type Code"(PO,S,S) = INVENTORY 'And' "Item Asset Indicator" = N 'And' "Cross BU" = N 'And' "Inventory Item"."All" Is not null

Value Type	Value	Conditions	Meaning
Source	Subinventory Material Account	"Subinventory Material Account"."All" Is not null 'And' "Cross BU" = N 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP) 'And' "Item Asset Indicator" = Y	Source: Sub inventory Material Account Condition Meaning - This condition will be evaluated for Inventory/Dropship destination type of PRs and Pos and is an Inventory item. The source is meant to drive the value from the Costing mapping set "Material Account – Subinventory" and This mapping set has input sources as "Secondary Inventory Name and Inventory Organization Code" "
Source	Subinventory Expense Account	"Subinventory Expense Account"."All" Is not null 'And' "Destination Type Code"(PO,S,S) = INVENTORY 'And' "Item Asset Indicator" = N 'And' "Cross BU" = N 'And' "Inventory Item"."All" Is not null	"Subinventory Expense Account"."All" Is not null And' "Destination Type Code"(PO,S,S) = INVENTORY Meaning system checks if the requisition is for Inventory destination and Subinventory Expense Account (Mapping set in costing - Expense Account - Subinventory) has the valid setup of account then it picks the charge account from this source. "Inventory Item"."All" Is not null Meaning as per item definition it is an inventory expense item.
Source	Ship-to Organization Expense Account	"Ship-to Organization Expense Account"."All" Is not null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP) 'And' "Item Asset Indicator" = N 'And' "Inventory Item"."All" Is not null 'And' "Cross BU" = N	"Ship-to Organization Expense Account"."All" Is not null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP) 'And' "Item Asset Indicator" = N 'And' "Inventory Item"."All" Is not null 'And' "Cross BU" = N Meaning system tries to fetch the account from the Costing mapping set "Expense Account – Organization" for Drop Ship destination type of PRs and Pos and not an asset item. This mapping set has input sources as "Inventory Organization Code"

Source	Ship-to Organization Material Account	"Ship-to Organization Material Account"."All" Is not null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP) 'And' "Item Asset Indicator" = Y 'And' "Cross BU" = N	"Ship-to Organization Material Account"."All" Is not null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP) 'And' "Item Asset Indicator" = Y 'And' "Cross BU" = N Meaning system tries to fetch the accounts from the Costing mapping set "Material Account – Organization" for Drop Ship destination type of PRs and Pos and is an asset item. This mapping set has input sources as "Inventory Organization Code"
--------	--	--	--

Note: Deliver to locations are not inventory locations and these are customer's locations with respect to drop ship. If you create any custom mapping set, with **deliver to location** as input source, the rule will fail

6.3 For Projects

Navigation

Setup and Maintenance → Global Search → Manage Account Rules

Suggestion: - It is always recommended to create account rule from scratch using create option.

Requirement: To derive the account code combination for PO charge account based on the projects. If project details are captured in PR or PO then which account needs to be derived based on the category and if not populated then which account needs to be derived.

1. Create two mapping sets in purchasing module with input source as Item category and output as account code combination.
2. First mapping set is triggered when project details are captured with respect to the categories
3. Second mapping set is triggered without project details with respect to the categories.

Input Source	Chart Of account	Valueset
Item Category	Operations Accounting Flex	ORA_PO_TAB_CATEGORY_VS

Mapping Set: XX_Non Capitalizable Accounts

"Project Number"(PJC,S,S) Is null 'Or' ("Project Number"(PJC,S,S) Is not null 'And' "Task Capitalizable Indicator"=N)

Category	Accounts
Furniture	01-000-1540-0000-000
Home & Office Merchandise	01-000-1540-0000-000
Laser Printer	01-000-1560-0000-000
Miscellaneous_1	01-000-7740-0000-000

Mapping Set: XX_Capitalizable Accounts

"Project Number"(PJC,S,S) Is not null 'AND' "Task Capitalizable Indicator" = Y

Category	Accounts
Furniture	01-740-1540-0000-000
Home & Office Merchandise	01-740-1540-0000-000
Laser Printer	01-740-1560-0000-000
Miscellaneous_1	01-740-7740-0000-000

Add the Mapping sets to the existing charge account rule

“XX_PURCHASING_CHARGE_ACCOUNT_CC” with above conditions listed.

6.4 For Work orders

Navigation

Setup and Maintenance → Global Search → Manage Account Rules

Suggestion: - It is always recommended to create account rule from scratch using create option.

Requirement: To derive the account code combination for PR/PO charge account which is initiated from Manufacturing Work Orders.

Add the new account rule to the existing charge account rule

XX_PURCHASING_CHARGE_ACCOUNT_CC" with above conditions listed.

Either we can use the standard source which will include below input sources or create a custom mapping set as per the business requirement.

- Inventory Organization Code
- Work Order Sub Type
- Purchasing Category Code
- Item Number

Value Type	Value	Conditions	Meaning
Source	Work Order Account	"Cross BU" = N 'And' "Work Order Account"."All" Is not null 'And' "Destination Type Code"(PO,S,S) = MANUFACTURING	"Work Order Account"."All" Is not null 'And' "Destination Type Code"(PO,S,S) = MANUFACTURING Meaning system tries to fetch the accounts from the Costing mapping set "Work Order" for work order destination type PRs and POs.

6
Source
Work Order Account

Rule 6: Conditions

Enter a constant value and source directly, or select a source.

Insert

7. How to customize the charge account's individual segment

Navigation

Setup and Maintenance → Global Search → Manage Account Rules

Suggestion: - It is always recommended to create account rule from scratch using create option.

Requirement: To derive the individual account segment of PR/PO charge account based on the "Project Number".

Add the new account rule to the existing charge account rule **XX_Purchasing_Project_Account** with below listed conditions.

Value Type	Value	Conditions	Meaning
Constant	7515	"Project Number"(PJC,S,S)=B200	"Project Number"(PJC,S,S)=B200 Meaning system tries to fetch the accounts 7515 when project is B200 is captured either in PR or PO. This is an individual account segment rule which would be evaluated and if it is true then the constant value will be returned in the Account Segment value of the Charge account.

The screenshot shows the 'Account Rule Definition' page for the rule named 'XX_Purchasing_Project_Account'. The rule is of type 'Segment'. The 'Rules' section shows a single rule with a constant value of 7515. The 'Rule 1: Condition' section shows a condition: 'Project Number' (GL.S.S) = 200.

Metadata on the right:

Last Update Date	2/2/2020

Associate this segment rule to the “Transaction Lead Account Definition”.

The screenshot shows the 'Account Rule Assignments' page. The table below lists the assignments for the 'XX_Purchasing_Tab_AD' rule.

Transaction Account Type	Account Combination Rule	Segment Rules	Company	Department	Account	Sub-Account	Product
Accrual Account	Purchasing Accrual Account Rule						
Charge Account	XX_PURCHASING_CHARGE_ACCOUNT				XX_Purchasing_Project_Ad		
Destination Charge Account	Purchasing Destination Charge Account						
Destination Variance Account	Purchasing Destination Variance Account						
Variance Account	Purchasing Variance Account Rule						

8. How to customize the variance account code combination for a specific requirement.

Navigation

Setup and Maintenance → Global Search → Manage Account Rules

Suggestion: - It is always recommended to create account rule from scratch using create option.

Requirement: To derive the Variance account combination to derive of PR/PO.

Add the new account rule “XX_Purchasing_Variance_Account” with below conditions listed.

Value Type	Value	Conditions	Meaning
Source	Requisition Variance Account	"Cross BU" = N 'And' "Requisition Variance Account"."All" Is not null	"Cross BU" = N 'And' "Requisition Variance Account"."All" Is not null Meaning system fetches the variance account from PR in the PO when PR is converted to PO.
Source	PO Charge Account	("Cross BU" = Y 'And' "Destination Type Code"(PO,S,S) = EXPENSE) 'Or' "Cross BU" = N 'And' "Requisition Variance Account"."All" Is null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP)	("Cross BU" = Y 'And' "Destination Type Code"(PO,S,S) = EXPENSE) 'Or' "Cross BU" = N 'And' "Requisition Variance Account"."All" Is null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP) Meaning system fetches the variance account from Purchase Order Charge account.

The screenshot shows the Oracle SCM rule configuration interface. At the top, there are fields for Name (XX_Purchasing_Variance_Account), Short Name (XXPVA), and Description (XX_Purchasing_Variance_Account). Below these are dropdowns for Chart of Accounts (Operations Accounting Flex) and Rule Type (Account combination). A section titled "Rules" contains a table with two rules. Rule 1 is "Requisition Variance Account" and Rule 2 is "PO Charge Account". Below the table, there is a section for "Rule 2: Condition:" with a text area for entering a condition. The condition entered is: ("Cross BU" = Y 'And' "Destination Type Code"(PO,S,S) = EXPENSE) 'Or' "Cross BU" = N 'And' "Requisition Variance Account" 'All' Is null 'And' ("Destination Type Code"(PO,S,S) = INVENTORY 'Or' "Destination Type Code"(PO,S,S) = DROP SHIP). A "Validate" button is at the bottom left.

9. How to customize the Accrual account code combination for a specific requirement

Use the standard **Purchasing Accrual Account Rule** OR follow the same steps to create new rule from scratch as mentioned for Variance account or Charge account.

10. Role of Destination charge account and destination variance account

Destination Charge Account - A charge account belonging to the destination organization.

Destination Variance Account - A variance account belonging to the destination organization.

These are used for Global procurement scenarios where Supply Orchestration is involved.

These two accounts are used for more advanced procurement scenarios where there is an intercompany transaction involving a procuring organization and a destination organization.

11. How to check if data security rules are enabled for an account segment or code combination.

- Go to Task "Manage Key Flex-fields", Search for "GL#" as Key Flex-field Code. "General Ledger" should be returned. Click on action "Manage Structures".
- Manage Key Flex-field Structures, Search for the structure customer defined. Click on the "Edit"
- For each segment, Edit the segment to check the "Default Value Set Code". List down all the value sets used each segment.

- Go to Task "Manage Value Sets". For each value set, Edit it. Please review if it is "Security enabled" and "Data Security Resource Name" is set. If yes, the user needs to have the data security to use the segment.

12. Role of Cross validation rules in Transaction Accounting Builder

Cross-validation rules prevent the creation of combinations with values that can't coexist in the same combination

Suppose your accounting key flexfield has an Organization segment with two possible values, 01 and 02. You also have a Natural Account segment with many possible values, but company policy requires that Organization 01 uses the natural account values 001 to 499 and Organization 02 uses the natural account values 500 to 999. You can create cross-validation rules to ensure that users can't create a general ledger account with combinations of values such as 02-342 or 01-750.

Note: Cross-validation rules have no effect on combinations that already exist. The flexfield treats any existing invalid combinations that pre-date the rule as valid.

If you want to prevent users from using previously existing combinations that are no longer valid according to your cross-validation rules, manually disable those combinations using the combinations page for that key flexfield.

The screenshot displays the 'Manage Cross Validation Rules' page. At the top, there are buttons for 'Save', 'Save and Close', 'Save and Create Another', and 'Cancel'. Below the search bar, there are filters for 'Chart of Accounts', 'Name', and 'Enabled'. The search results table shows a single rule named 'TestCVR1' with a description 'TestCVR1 Description'. The table has columns for 'Name', 'Description', 'From Date', 'To Date', and 'Enabled'. Below the table, there is a section for 'TestCVR1: Details' which includes a 'Condition Filter' and a 'Validation Filter'. The 'Condition Filter' details show 'company Equals to 3211' and the 'Error Message Name' is 'GL_CVR_1062019_TESTCVR1'. The 'Validation Filter' details show 'account Equals to 11015' and the 'Error Message' is 'When company equals 3211 account should be 11015'.

13. Charge account generation based upon DFF For Requisition/Purchase order.

Navigation

Setup and Maintenance → Global Search → Manage Account Rules

Suggestion: - It is always recommended to create account rule from scratch using create option.

Requirement: To derive the Company Segment for PR/PO charge account based on the DFF value captured.

Add the new account rule “**XX_Purchasing_DFF_Company**” with below conditions listed.

- Create Mapping Set
- Input Source.
 - 1..1. PO Header Attribute1 (Value Set : Company)
 - 1..2. Requisitioning BU Name (Value Set : ORA_PER_BUSINESS_UNITS_VS)

The screenshot shows the 'Edit Mapping Set' window for the mapping set 'XX_Purchasing_DFF_Company'. The window is divided into several sections:

- Header Information:**
 - Name: XX_Purchasing_DFF_Company
 - Short Name: XPDFFCMS
 - Description: XX_Purchasing_DFF_Company
 - Output Type: Segment
 - Subledger Application: Purchasing
- Input Sources:**
 - View: [Dropdown]
 - Number Input Source:
 - 1 PO Header Attribute1
 - 2 Requisitioning BU Name
- Chart of Account:**
 - View: [Dropdown]
 - Chart of Accounts:
 - Operations Accounting Flex
- Operations Accounting Flex: Mapping**
 - When entering Input values, enter a value, an asterisk to represent any value, or leave blank for no value.
 - View: [Dropdown] [Add] [Export] [Import] [Set Default] [Detach]
 - Mapping Table:

Default	Input	Output	Effective Start Date	Effective End Date
	PO Header Attribute1	Requisitioning B Company		
Americas	Vision Operations	01		
Asia pac	Vision India	25		

Value Type	Value	Conditions	Meaning
Mapping Set	XX_Purchasing_DFF_Company		Meaning system evaluates to true as the condition is blank and mapping set will be called for further evaluation as per the input sources.
