

Problem with approval rules

PR

Subject: Approval Rule Not Recognizing Category ID from Requisition Line

Hello,

We are facing an issue with one of our requisition line-level approval rules.

The rule is intended to evaluate the **purchasing category** using fields such as:

- ReqLineDimension.FLEXPARAMCategoryId
- ReqLineDimension.procurementCategoryId
- ReqLineDimension.procurementCategoryHierarchyLevel01

However, the rule only works when we explicitly set the condition to

Category ID = 0.

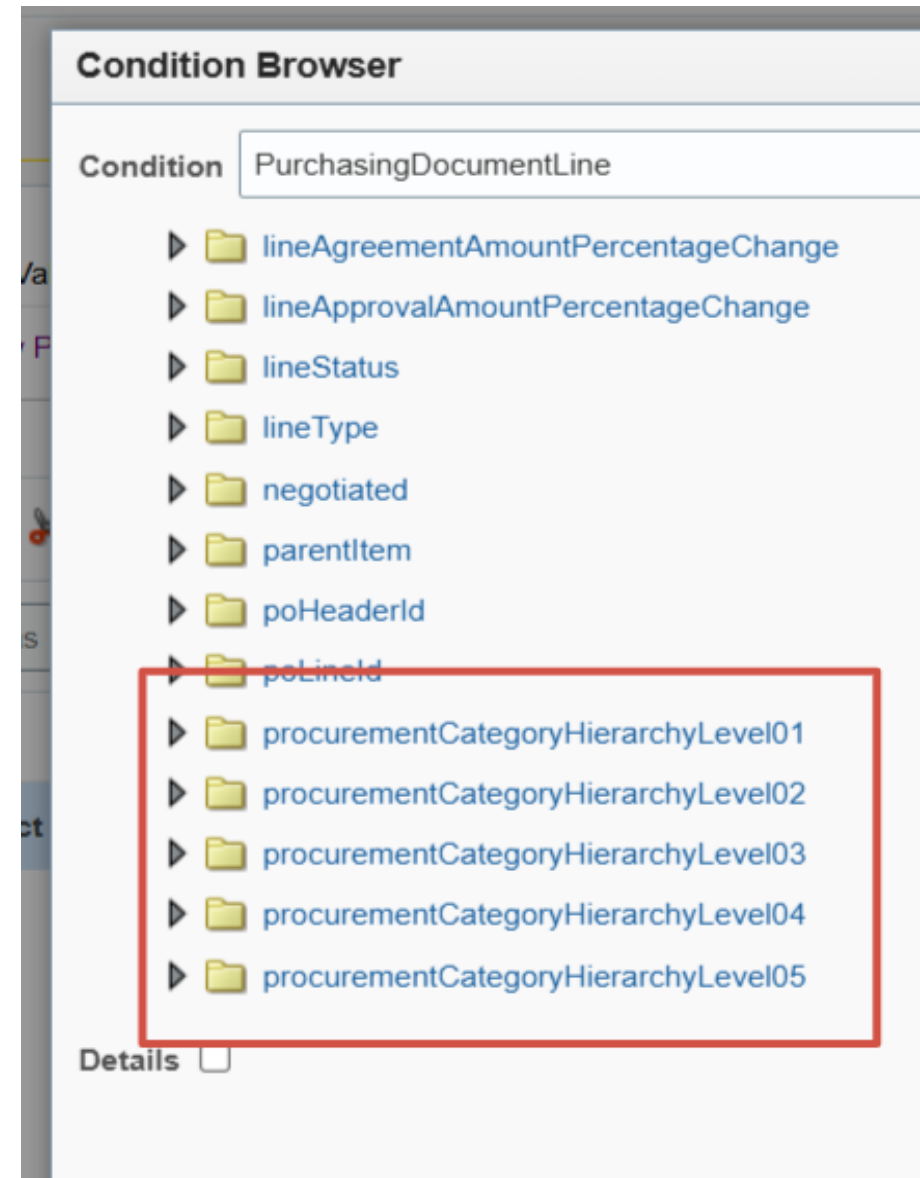

This indicates that the actual category ID is either **not populated**, **not passed to the workflow**, or **not recognized** at runtime.

We have confirmed that the category exists on the requisition line, and that the same logic works for Level 1 in some other rules.

Could you please clarify:

- Is this a known issue in Oracle Fusion?
- Are there limitations when using deeper hierarchy levels (Level 2–4)?
- Is there a preferred field we should be referencing for accurate category matching in line-level rules?

Thank you for your support.

1 use field Category ID – ERROR. The rule only works when the category ID condition is set to null, which indicates that the rule does not recognize the actual category ID. Why is this happening?

Please help – how we can use condition like “category_id” = *** to use approval rule below?
