

Redwood Customizations with Visual Builder Studio (VBS)

VBS14 – Use Case 8 Using Business Rules to Hide or Show Fields Conditionally Based on User's Role

Overview

This step-by-step guide walks through Use Case 8 of the Oracle Fusion Visual Builder Studio (VBS) training series. You will learn how to use Business Rules to conditionally show or hide a field on a page depending on the security role assigned to the logged-in user.

Business Scenario

The "Urgent" checkbox on the Delivery and Billing Details page (within Self Service Procurement) is currently visible to all users. This has caused misuse – requesters are ticking the box unnecessarily to speed up their deliveries. The organization has decided:

- Only users assigned a specific custom role ("RV_URGENT_RSSP") should see the Urgent checkbox.
- All other users should not see the Urgent field at all.

What You Will Learn

- How to navigate to Oracle Security Console and create a custom Job Role.
- How to assign a custom role to a user.
- How to launch Visual Builder Studio (VBS) directly from an Oracle Fusion page.
- How to create an FLS (Field Level Security) Business Rule in VBS.
- How to set a condition based on the logged-in user's role, and control field visibility.
- How to publish VBS changes and test them across two different user accounts.

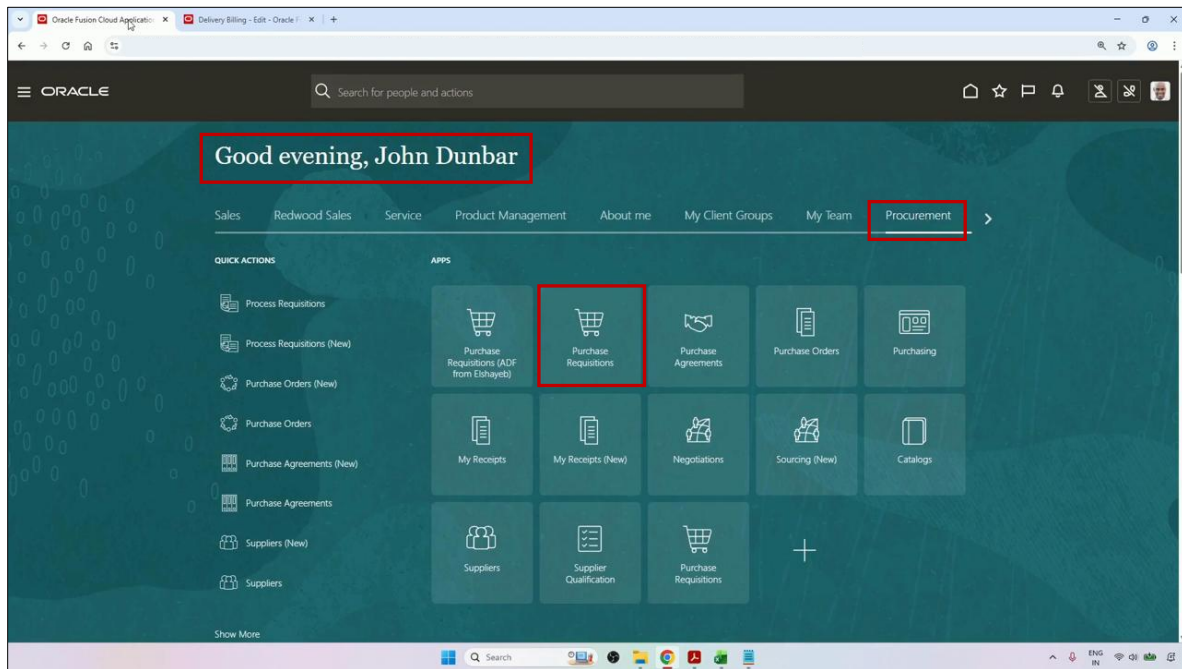

Pre-Requisites

- Set the user as an employee of US1 Business Unit (from Manage Users task)
- Add roles
 1. Advanced Procurement Requester
 2. Procurement Requester
- Assign Data Access (Above 2 Roles - US1 Business Unit)
- Assign the user as a Procurement Agent of US1 Business Unit (from "Manage Procurement Agents" task)
- Run the scheduled processes
 1. Retrieve Latest LDAP Changes
 2. Import User and Role Application Data
- Navigate to Purchase Requisitions and Set Requisition Preferences
- Keep access to John.Dunbar ready
- Ensure VBS project is created with John.Dunbar as the owner
- The usernames in the sessions should not be hard coded (Unless it is specifically required like John.Dunbar)

Part 1: Understanding the Current State

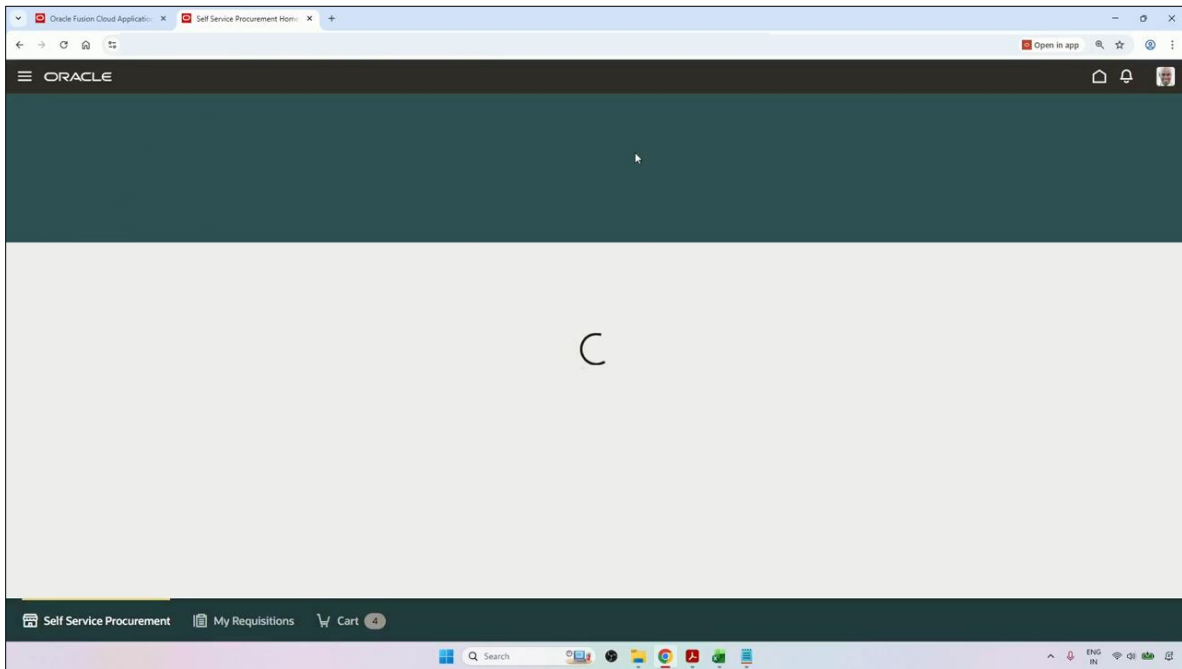

Before making any configuration changes, observe the current default behavior: the Urgent checkbox is visible to all users on the Delivery and Billing Details page.

Step 1: Log in to Oracle Fusion Cloud as John Dunbar. Once logged in, you will land on the Oracle Fusion home page.

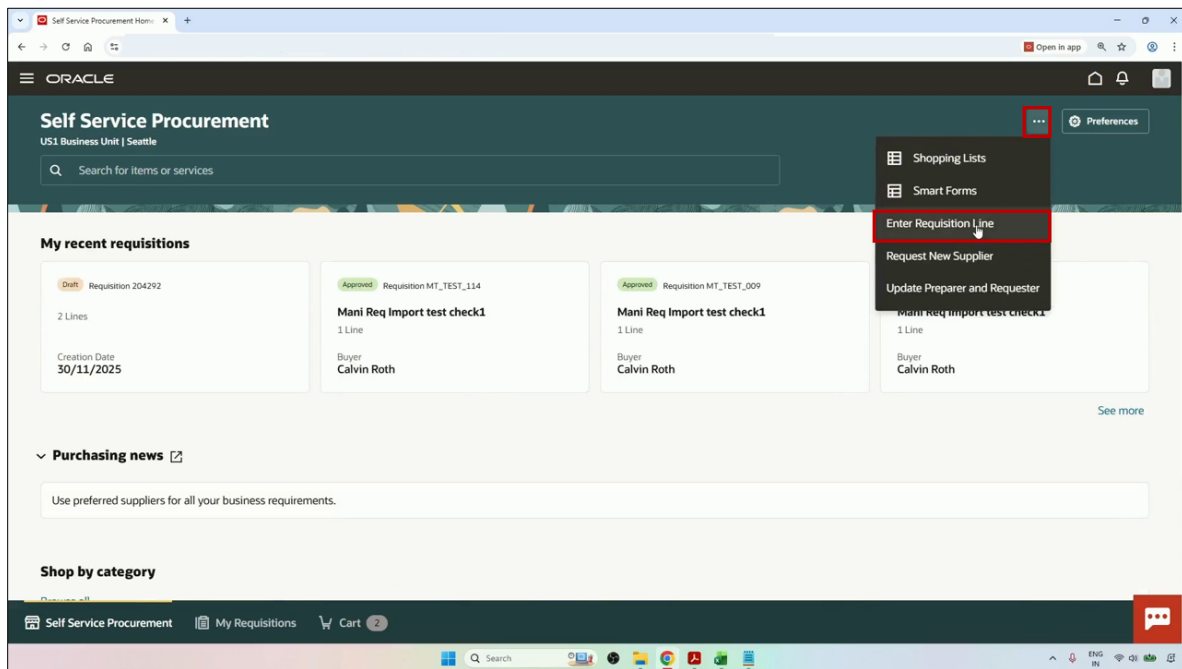

Oracle Fusion Cloud home page – logged in as John Dunbar

Step 2: From the home page, click on the "Procurement" tab in the top navigation bar. Then click on "Purchase Requisitions" from the Procurement menu, or navigate directly to Self Service Procurement.

Self Service Procurement page loading – note the navigation tabs at the bottom: "Self Service Procurement", "My Requisitions", and "Cart"

Step 3: On the Self-Service Procurement page, click the "Preferences" icon or use the action menu to find "Enter Requisition Line". Click "Enter Requisition Line" to begin creating a new requisition.

Self Service Procurement – click the preferences/action menu and select "Enter Requisition Line"

Step 4: The New Requisition Line form opens. In the Item field, type an item number (e.g., AS15144) and select it from the search results. The line description and pricing will auto-populate. Click "Create and Continue" to proceed.

The screenshot shows the Oracle 'New Requisition Line' form for the 'US1 Business Unit | Seattle'. The form is titled 'New Requisition Line' and has a 'Cancel' button and a 'Create and Continue' button. A modal window is open, asking 'Do you want to select an item?'. The 'Yes, select an existing item' radio button is selected. The 'Item' field is populated with 'AS15144'. The 'Line Description' field is populated with '1920x1080 STD Resolution Monitor'. The 'Line Type' is 'Goods', 'Item Revision' is empty, 'Category' is 'Monitors', 'Requested Delivery Date' is '12/3/25', 'Destination Type' is 'Expense', 'Source' is 'New supplier', and 'Agreement Type' is 'Blanket Purchase Agreement'.

New Requisition Line – item selected with description and pricing filled in. Click "Create and Continue" to proceed to the Delivery and Billing Details page.

Step 5: The Delivery and Billing Details page opens. Scroll down within the Delivery section. Notice the "Urgent" checkbox – this is currently visible to all users. The goal of this use case is to hide it from users who do not have the RV_URGENT_RSSP role.

Back Cancel Update and Create New Update

Delivery and Billing Details
Requisition 204291, Line 5

Delivery to Address
411 University Street, Seattle, WA 98101, King, United States

UN Number UN Number Description

Hazard Class Hazard Class Description

☒ Urgent

Total

Total Percentage	Total Amount	Total Quantity
100	\$83.00	1

Distribution 1
101.10.14100.000.000.000

Percentage	Amount	Quantity	...
100	\$83.00	1	

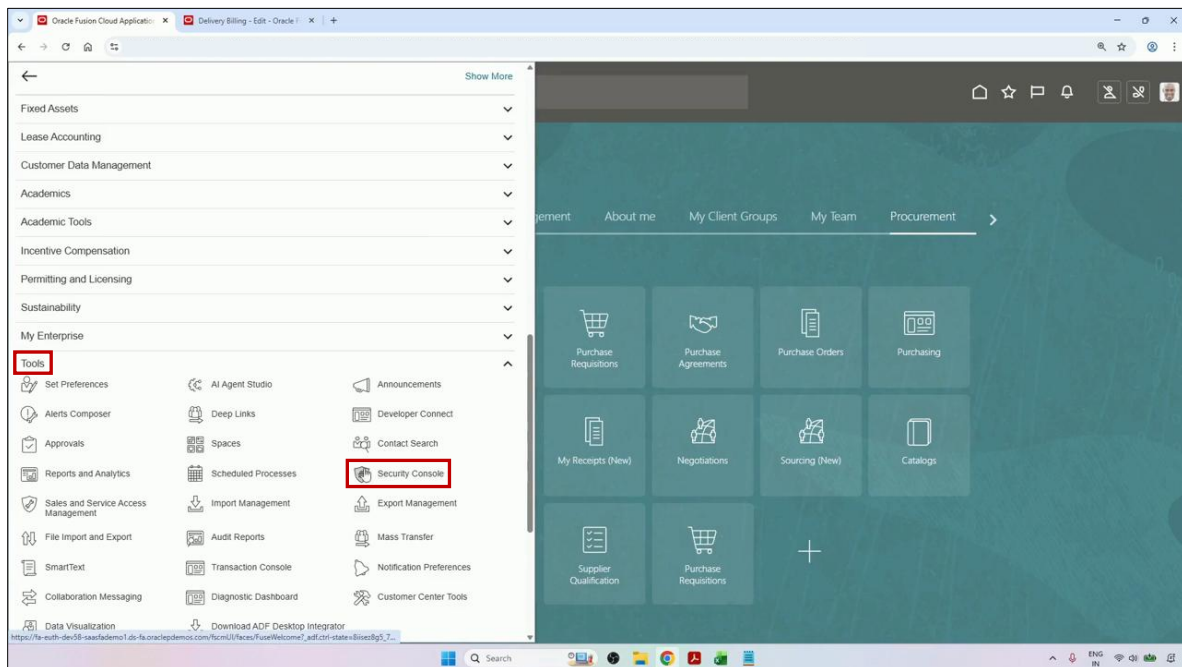

Delivery and Billing Details – the "Urgent" checkbox is currently visible in the Delivery section. This is the default state before any business rules are applied.

Note: This is the “before” state. After completing this use case, the Urgent checkbox will only appear for users who have been assigned the RV_URGENT_RSSP custom role.

Part 2: Create a Custom Security Role in Security Console

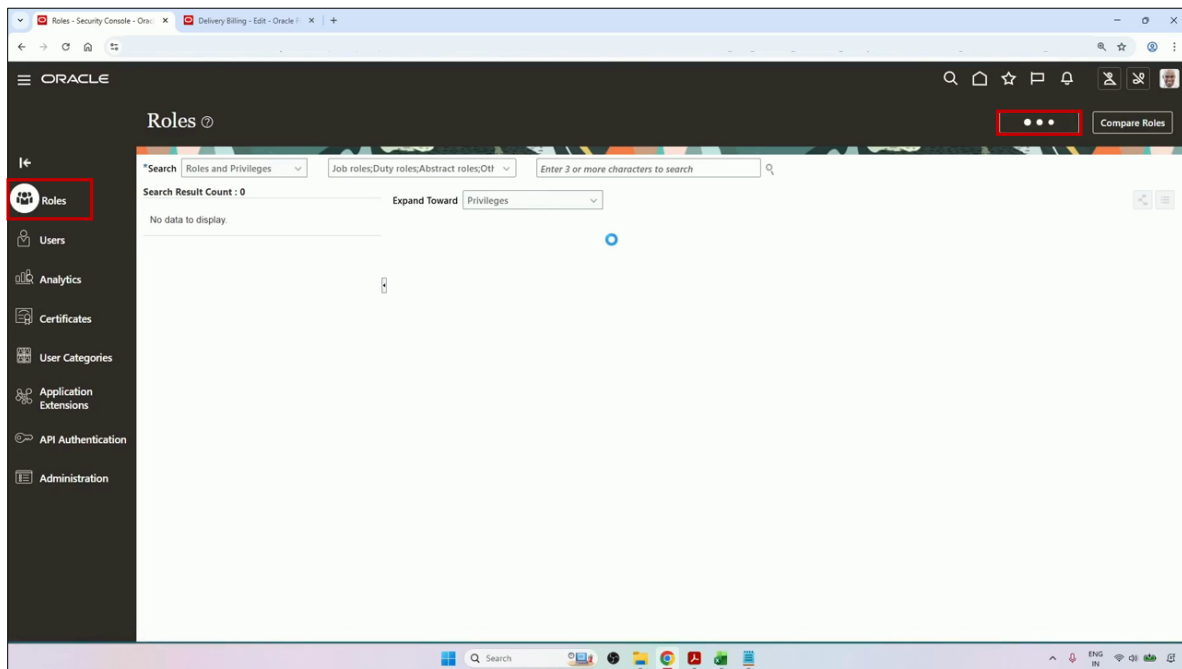

You will now create a new custom Job Role called "RV_URGENT_RSSP" in the Oracle Security Console and assign it to John Dunbar. This role will be referenced in the VBS Business Rule condition.

Step 6: From any Oracle Fusion Cloud page, click the Navigator icon (the hamburger/grid icon at the top left). In the expanded navigation menu, scroll down to the "Tools" section and click on "Security Console".

Oracle Fusion Navigator menu expanded – locate the "Tools" section and click "Security Console" to open it

Step 7: The Security Console opens in a new browser tab. In the left navigation panel, click "Roles". This displays the Roles search page. Click the "Create Role" button at the top right.

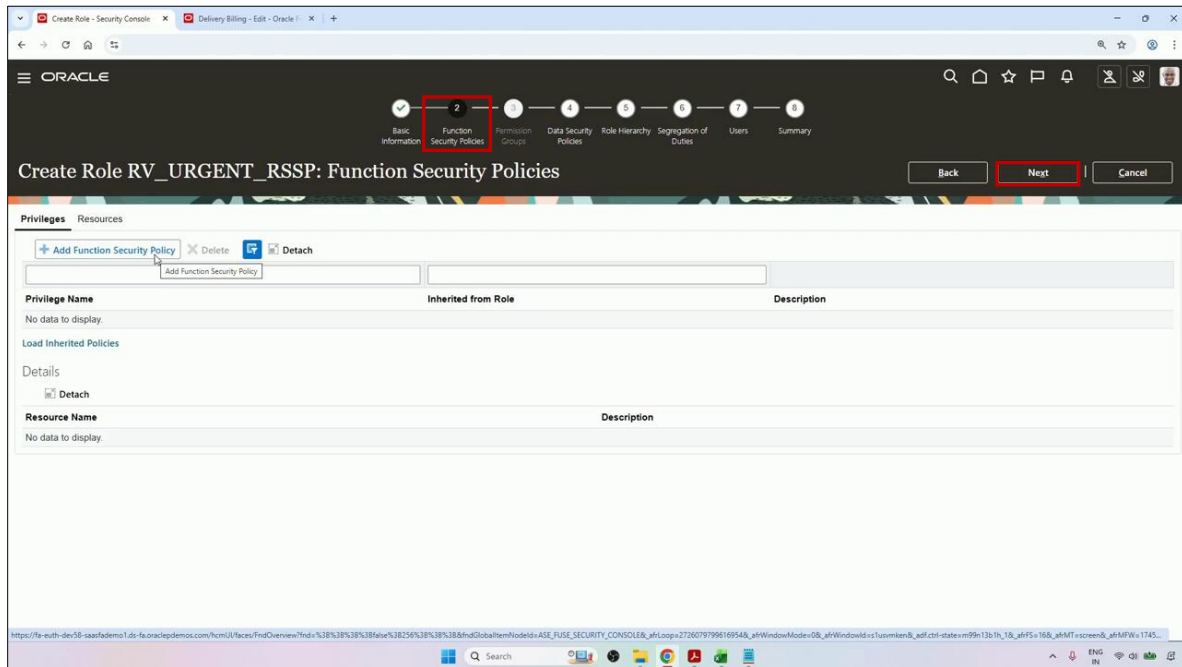

Security Console – Role's page. Click "Create Role" to launch the role creation wizard

Step 8: Step 1 of the wizard is "Basic Information". Enter the following values exactly as shown: Role Name = RV_URGENT_RSSP, Role Code = RV_URGENT_RSSP. For Role Category, click the dropdown and select "Common Job Role". Then click "Next".

The screenshot shows the Oracle Security Console interface for creating a new role. The wizard has eight steps: 1. Basic Information, 2. Function Security Policies, 3. Permission Groups, 4. Data Security Policies, 5. Role Hierarchy, 6. Segregation of Duties, 7. Users, and 8. Summary. Step 1 is currently active and highlighted with a red box. The title of the step is "Create Role RV_URGENT_RSSP: Basic Information". Below the title, there are three input fields: "Role Name" with the value "RV_URGENT_RSSP", "Role Code" with the value "RV_URGENT_RSSP", and "Role Category" with a dropdown menu. The "Role Category" dropdown is also highlighted with a red box. Below these fields is a checkbox labeled "Enable Permission Groups" and a text area labeled "Description". At the bottom right of the form, there are three buttons: "Back", "Next" (highlighted with a red box), and "Cancel". The Oracle logo is visible in the top left corner of the interface.

Create Role: Step 1 Basic Information – enter Role Name "RV_URGENT_RSSP", Role Code "RV_URGENT_RSSP", and set Role Category to "Common Job Role"

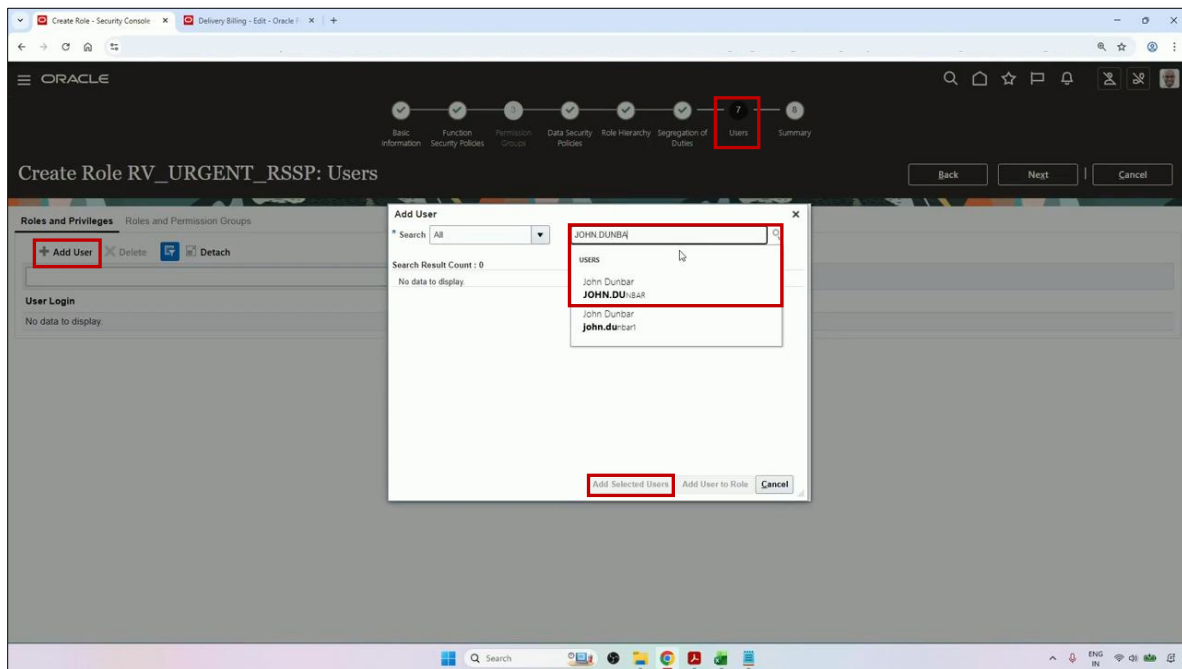

Step 9: Step 2 is "Function Security Policies". No changes are required here for this use case. Click "Next" to proceed.

Create Role: Step 2 Function Security Policies – no function privileges are needed for this role. Click "Next" to continue.

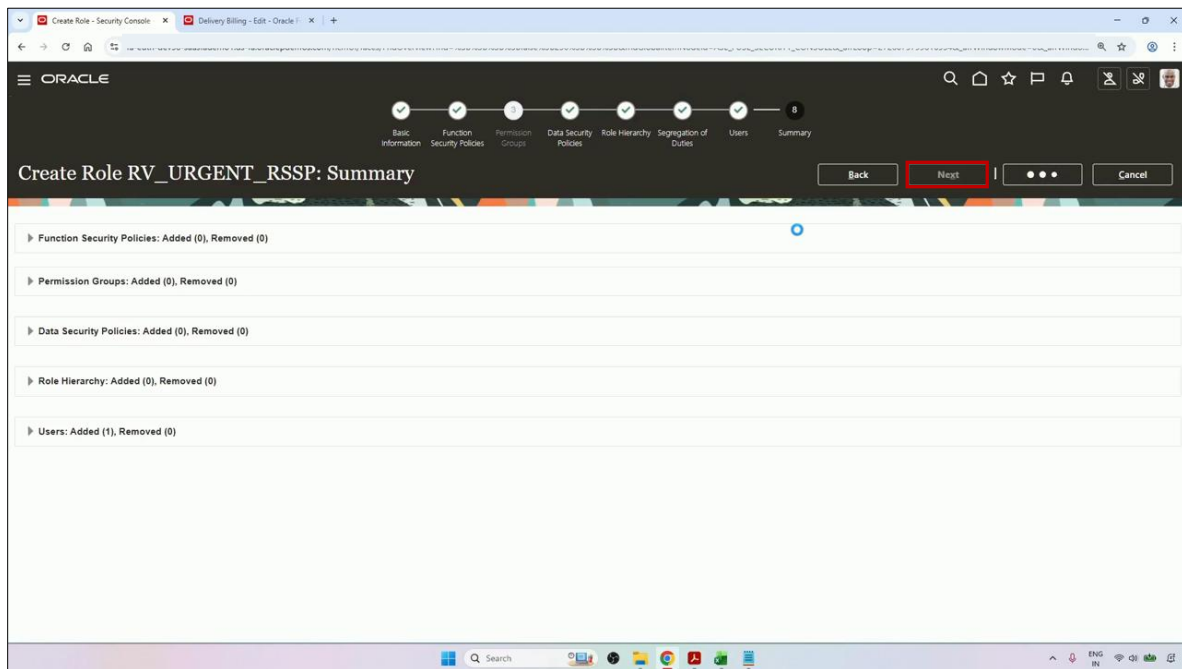

Note: Continue clicking "Next" through Step 3 (Permission Groups), Step 4 (Data Security Policies), Step 5 (Role Hierarchy), and Step 6 (Segregation of Duties) without making any changes. This role acts purely as an identity marker for the business rule condition.

Step 10: You will reach Step 7: "Users". Click the "Add User" button. In the Add User dialog that appears, type "JOHN.DUNBAR" in the search field and press Enter or click the search icon.

Create Role: Step 7 Users – click "Add User", search for "JOHN.DUNBAR" in the dialog, and select the user from the results

Step 11: Select John Dunbar from the search results and click "Add User to Role" to confirm the assignment. Then click "Next" to proceed to Step 8: Summary.

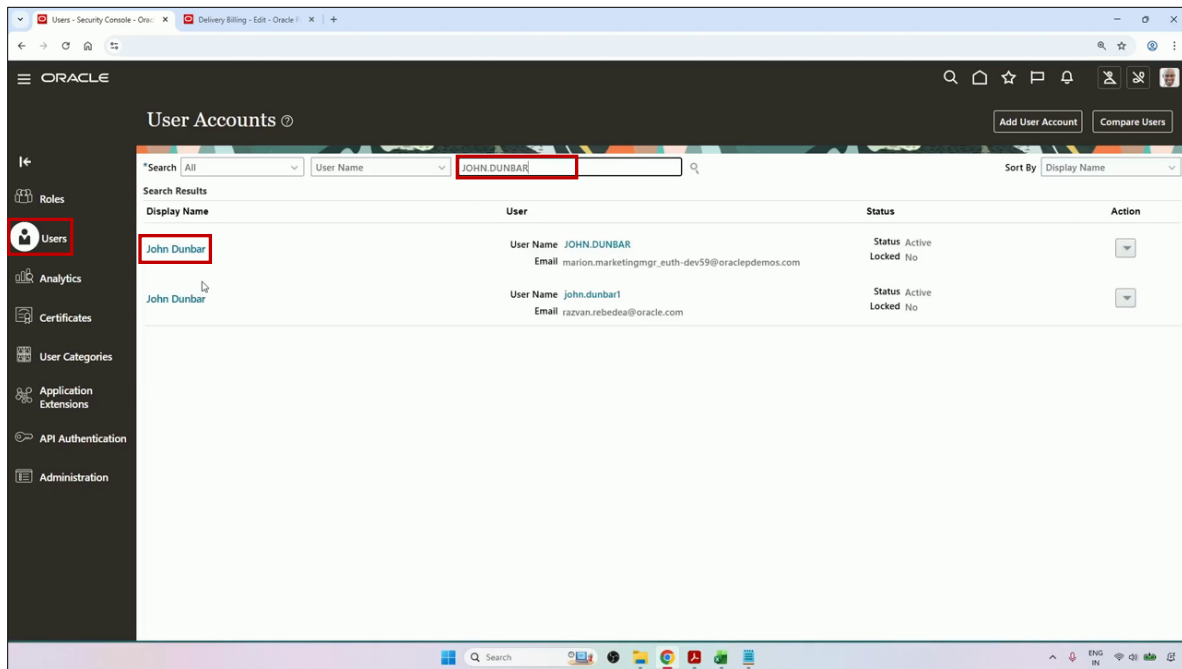

Create Role: Step 8 Summary – confirms "Users: Added (1), Removed (0)". Click "Save and Close" to create the role and save all changes.

Note: After clicking "Save and Close", the role RV_URGENT_RSSP is created and assigned to John Dunbar. This may take a few seconds to process.

Part 3: Verify the Role Assignment

Before proceeding to VBS, confirm the role has been correctly assigned to John Dunbar by checking his user account in the Security Console.

Step 12: In the Security Console, click "Users" in the left navigation panel. Set the search filter to "User Name", type "JOHN.DUNBAR" in the search field, and click the search icon.

Security Console Users page – search by User Name "JOHN.DUNBAR" to locate John Dunbar's account

Step 13: Two results may appear (JOHN.DUNBAR and john. dunbar1). Click on the first result "John Dunbar" with username JOHN.DUNBAR (uppercase) to open his User Account Details page.

Step 14: On the User Account Details page, scroll down through the Roles section. Locate "RV_URGENT_RSSP" in the role list to confirm the custom role was successfully assigned.

The screenshot shows the Oracle User Account Details page for John Dunbar. The page is divided into several sections: User Information, Account Information, and Associated Worker Information. The 'Roles' section is highlighted with a red box, and the role 'RV_URGENT_RSSP' is also highlighted with a red box. The role list is as follows:

Role	Role Code	Assignable	Auto-Provisioned
REST Services User GSE	REST_SERVICES_USER_GSE	No	No
RV_REQUESTER_BEGINNER_ROLE	RV_REQUESTER_BEGINNER_ROLE	No	No
RV_URGENT_RSSP	RV_URGENT_RSSP	No	No
Receiving Agent	ORA_RCV_RECEIVING_AGENT_JOB	Yes	No
Resource	ORA_HZ_RESOURCE_ABSTRACT	Yes	No
Revenue Analyst Enterprise Set	AR_REVENUE_ANALYST_JOB_ENTERPRISE	No	Yes
Rollup Administrator	DS_ROLLUP_ADMINISTRATOR	No	No

User Account Details: John Dunbar – scroll through the Roles section to find "RV_URGENT_RSSP" confirming the role is correctly assigned

Note: The roles list is alphabetical. Scroll to the "R" section to find RV_URGENT_RSSP. If it does not appear, go back and check the role creation steps.

Part 4: Launch Visual Builder Studio from Oracle Fusion

Note: Works only for the user "john.dunbar". If you assign any roles or data access or any other configuration to any other user, it will not work. Only john.dunbar can do VBS Redwood Customizations

Visual Builder Studio (VBS) is launched directly from within the Oracle Fusion page you want to customize. This ensures VBS opens in the correct context for the right application and page.

Step 15: Navigate back to Oracle Fusion Cloud. Go to Self Service Procurement, open an existing Requisition or create a new Requisition Line and navigate to the "Delivery and Billing Details" page. This is the page you will be customizing.

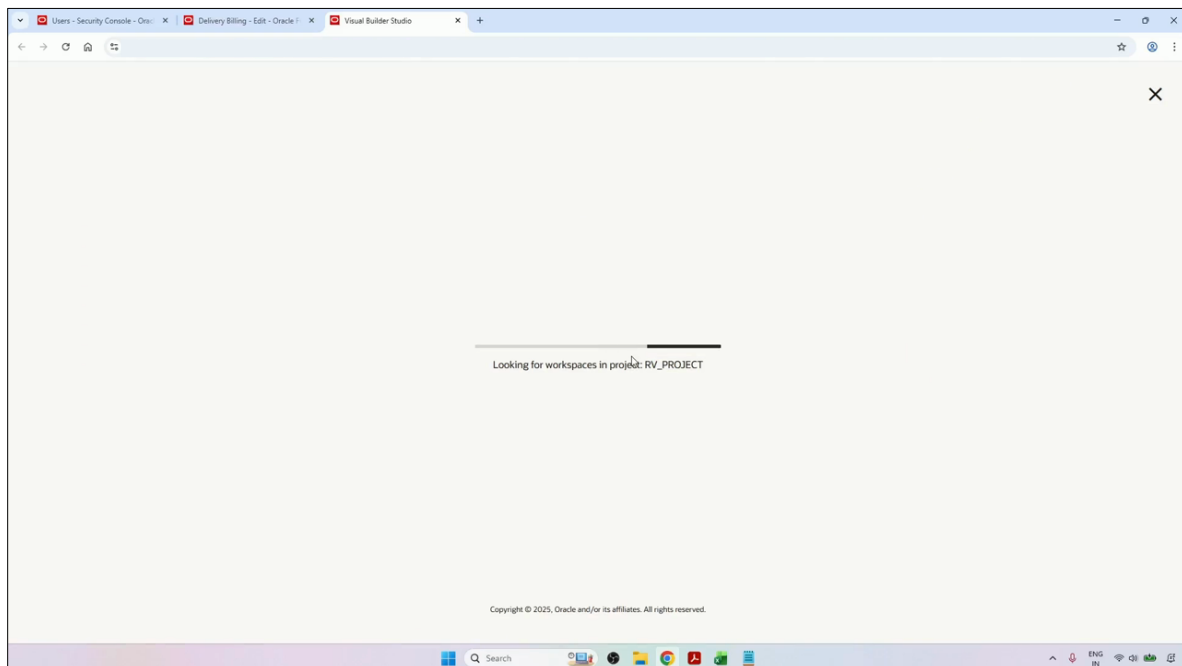

The screenshot displays the Oracle Fusion 'Delivery and Billing Details' page. At the top, there's a navigation bar with the Oracle logo and a 'Back' button. Below this, the page title 'Delivery and Billing Details' is shown, along with the requisition details 'Requisition 204291, Line 5'. A modal form is open, showing details for a '1920x1080 STD Resolution Monitor' with a quantity of '1'. The 'Delivery' section contains several fields: 'Requester' (John Dunbar), 'Requested Delivery Date' (12/3/25), 'Destination Type' (Expense), 'Deliver-to Location Type' (Internal), 'Deliver-to Location' (Seattle), 'Deliver-to Address' (411 University Street, Seattle, WA 98101, King, United States), 'UN Number', 'UN Number Description', and 'Hazard Class Description'. The 'Update' button is highlighted in red.

Delivery and Billing Details page – this is the target page to customise. Scroll down slightly – you can see the Urgent checkbox at the bottom. The "Edit Page" button to launch VBS is available from this page context.

Step 16: To launch VBS, click the small "Edit" or page-level tools icon available in the Redwood page interface (typically accessible via the user settings or page actions area). Select "Edit Page in Visual Builder Studio" from the options.

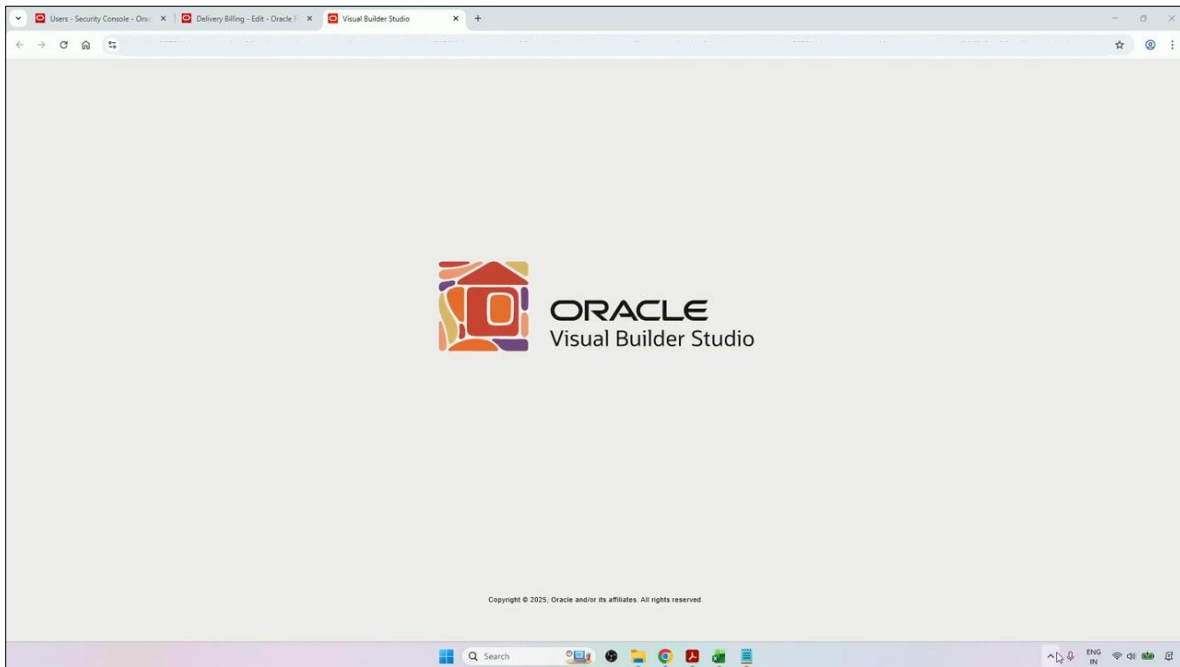

Note: In Oracle Fusion Redwood pages, the option to "Edit Page in Visual Builder Studio" is accessible from the Settings and Actions menu (the user avatar icon at the top right) under the Administration section, or via a dedicated edit icon on the page.

Step 17: A VBS project selection dialog will appear. Select "RV_PROJECT" from the list and click "Select". VBS will begin loading your project workspace.

VBS loading screen showing "Looking for workspaces in project: RV_PROJECT" – wait for VBS to finish loading

Step 18: VBS fully loads, displaying the Oracle Visual Builder Studio interface with your Redwood Customization project open.

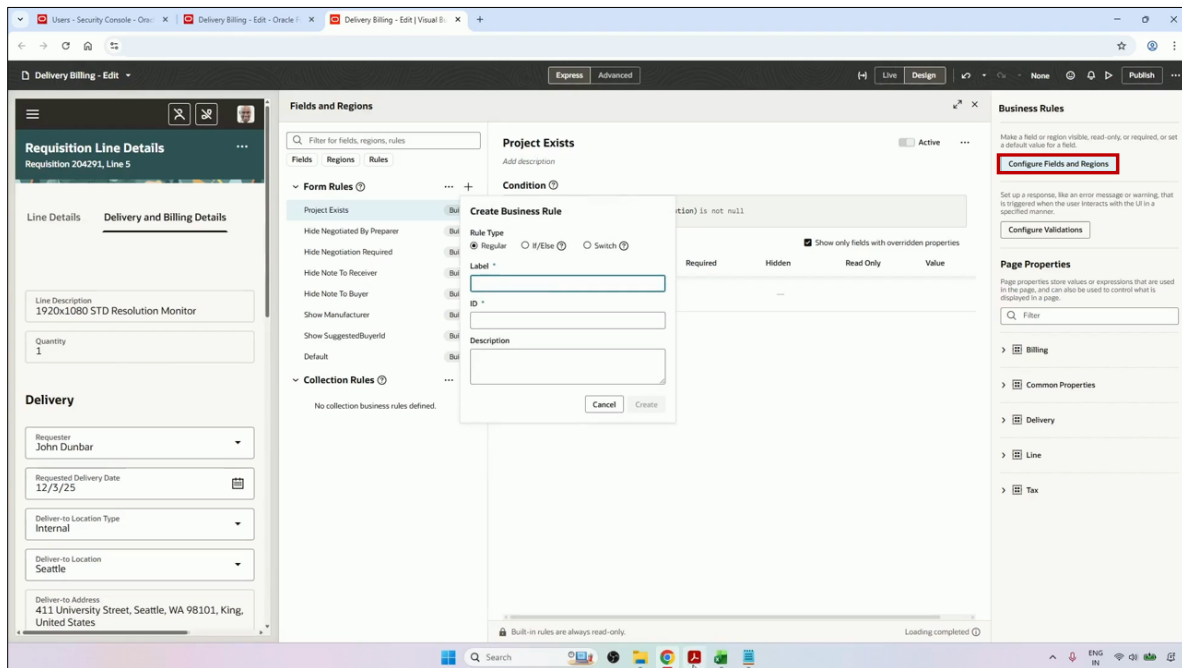

Oracle Visual Builder Studio loading – wait for the full interface to load before proceeding

Part 5: Create the FLS Business Rule in VBS

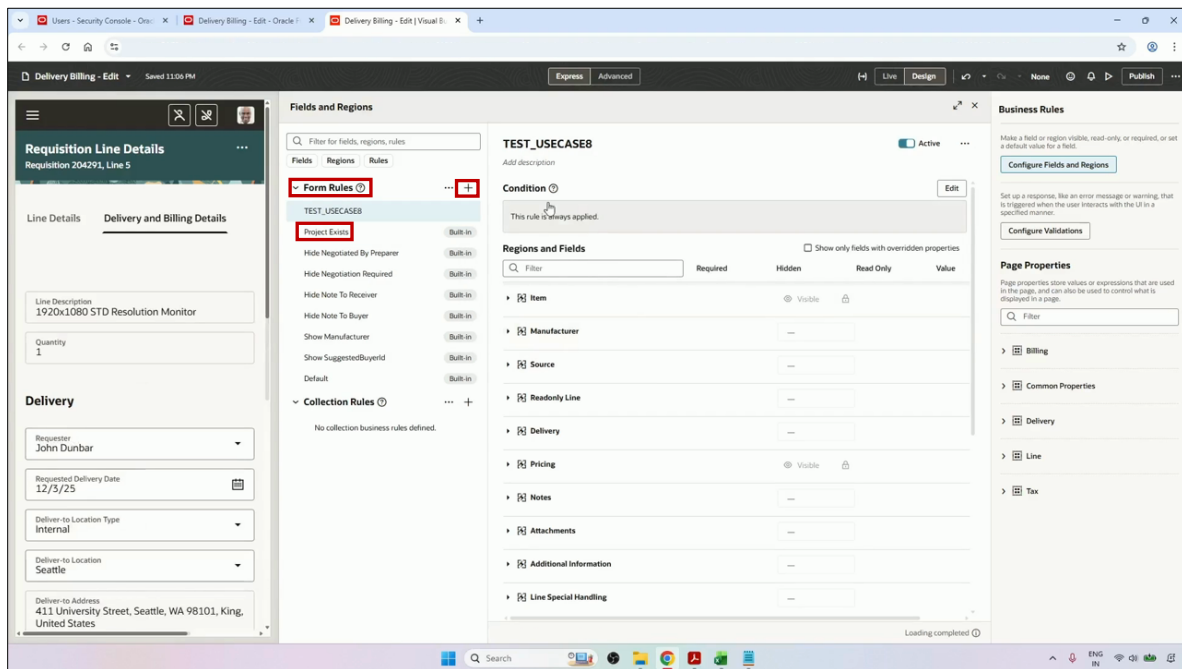

With VBS open, you will now configure a Field Level Security (FLS) Business Rule on the Delivery and Billing Details page. An FLS rule has two branches: "New Rule" (the IF condition) and "otherwise" (the ELSE/default behavior).

Step 19: In VBS, ensure you are on the Delivery and Billing Details page in the canvas. On the right-side panel, locate and click "Configure Fields and Regions" under the Business Rules section. This opens the Fields and Regions editor.

VBS – the Business Rules panel on the right shows "Configure Fields and Regions" and "Configure Validations" buttons. Click "Configure Fields and Regions" to open the rules editor.

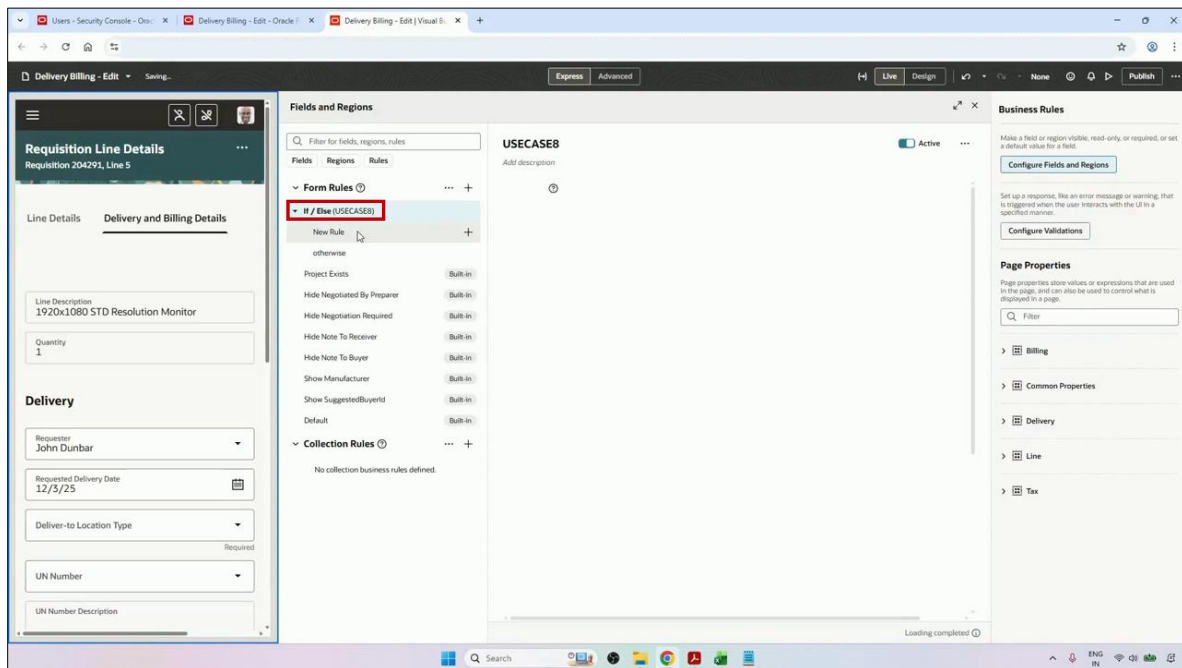

Step 20: The Fields and Regions panel opens on the left with a "Rules" tab. You can see existing built-in rules such as "Project Exists". Click the "+" icon next to "Form Rules" to add a new rule. A dialog will appear asking for the rule name and type.

Fields and Regions – Rules tab showing existing Form Rules. Click the "+" icon next to "Form Rules" to create a new business rule.

Step 21: In the Create Business Rule dialog, type "USECASES8" as the rule name. Importantly, set the Rule Type to "FLS" (Field Level Security). Click "Create" to confirm.

Note: The FLS rule type automatically creates two branches: "New Rule" (which acts as the IF condition) and "otherwise" (which acts as the ELSE/default). This is the correct rule type for controlling field visibility based on user roles.

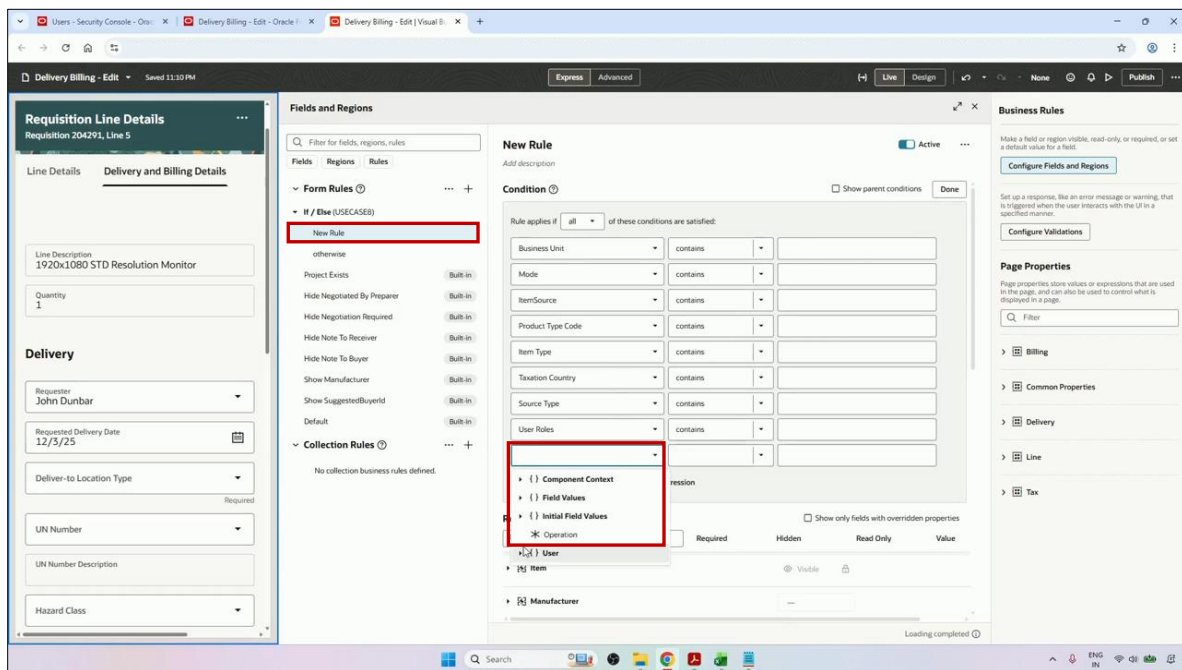

USECASES8 FLS rule created – the Form Rules panel now shows the "New Rule" (IF branch) and "otherwise" (ELSE branch) nested under USECASES8

Part 6: Configure the "New Rule" Branch (IF – Role Contains RV_URGENT_RSSP)

The "New Rule" branch is the IF condition. You will configure it to trigger when the logged-in user's role contains "RV_URGENT_RSSP", and set the Urgent field to Visible.

Step 22: Click on "New Rule" in the Form Rules panel to select it. Then click the "+" icon in the Condition section to add a new condition. A condition editor will open showing a tree of available condition sources.

New Rule – click "+" in the Condition area to add a condition. The condition tree expands showing Component Context, Field Values, and the "User" section where role-based conditions are found.

Step 23: In the condition tree, expand "Field Values" and then expand the "User" section. You will see attributes such as User Id, Full Name, User Name, Roles, Permissions, and Is Authenticated. Click on "Roles" to add it as the condition field.

Step 24: A "Roles" condition row will appear. Set the operator to "contains". In the value field, type "RV_" and a dropdown will appear showing matching roles. Select "RV_URGENT_RSSP" from the list. Then click "Done" to save the condition.

The screenshot displays the Oracle ERP Visual Builder interface for configuring a new rule. The left sidebar shows the 'Requisition Line Details' for 'Requisition 204291, Line 5'. The main area is divided into 'Fields and Regions' and 'New Rule' sections.

Fields and Regions: This section contains a search bar and a list of fields. Under the 'Rules' tab, there are 'Form Rules' and 'Collection Rules'. The 'Form Rules' section shows a list of built-in rules, including 'Project Exists', 'Hide Negotiated By Preparer', 'Hide Negotiation Required', 'Hide Note To Receiver', 'Hide Note To Buyer', 'Show Manufacturer', 'Show SuggestedBuyerId', and 'Default'. The 'Collection Rules' section is currently empty, showing 'No collection business rules defined'.

New Rule: This section is used to define the rule's condition. It includes a 'Rule applies if' dropdown set to 'all', a 'Condition' section with a table of conditions, and a 'Regions and Fields' section.

Rule applies if	all	of these conditions are satisfied:
Business Unit	contains	
Mode	contains	
ItemSource	contains	
Product Type Code	contains	
Item Type	contains	
Taxation Country	contains	
Source Type	contains	
User Roles	contains	
Roles	contains	RV_URGENT_RSSP

The 'Regions and Fields' section shows a search bar with 'URGENT' entered, and a table of fields. The 'Delivery' region is expanded, showing a table of fields.

Region	Field	Required	Hidden	Read Only	Value
Delivery	Urgent				

The 'Business Rules' section on the right provides additional configuration options, including 'Configure Fields and Regions', 'Configure Validations', and 'Page Properties'.

New Rule condition set: Roles contains "RV_URGENT_RSSP". The Regions and Fields section below shows a filter for "URGENT" – the Urgent field under the Delivery region is listed here ready to be configured.

Step 25: With the condition saved, scroll down to the "Regions and Fields" section. Type "urgent" in the filter box. The Urgent field will appear under the "Delivery" region. Click on the Urgent row and select "Visible" to make the field visible when this condition is true.

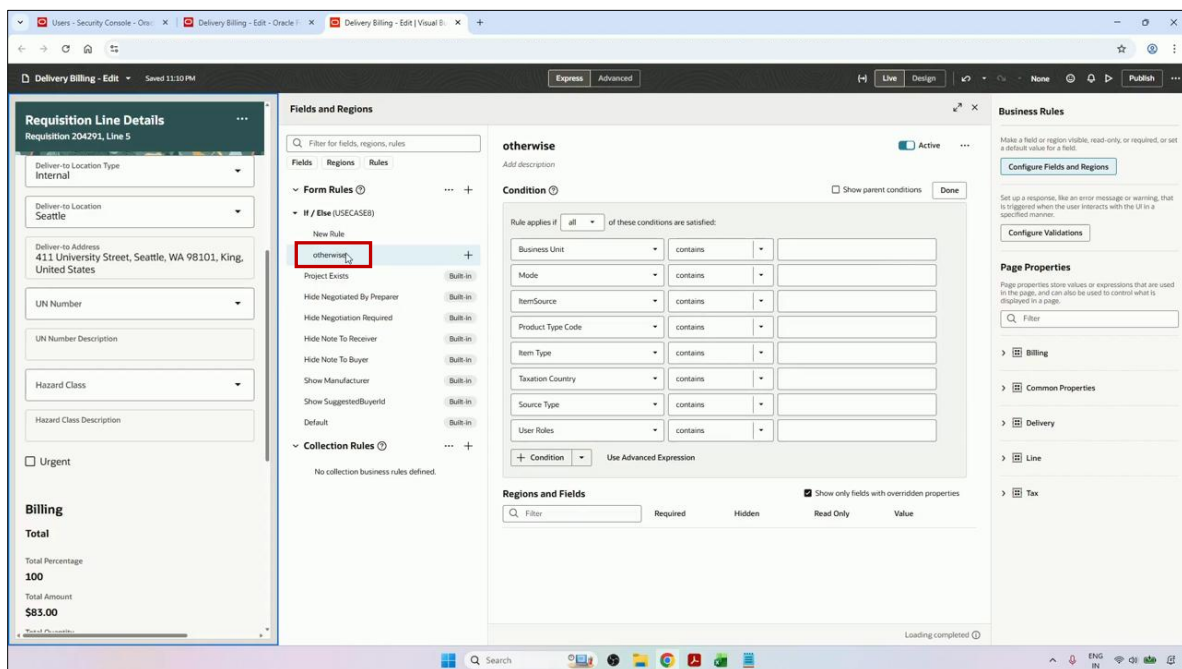

The screenshot shows the Oracle Delivery Billing configuration interface. On the left, the 'Requisition Line Details' for 'Requisition 204291, Line 5' are visible. The main area is titled 'New Rule' and shows a rule configuration. The rule is active and has a condition 'RV_URGENT_RSSP'. In the 'Regions and Fields' section, the 'Urgent' field is highlighted under the 'Delivery' region, and the 'Visible' option is selected. The 'Urgent' field is also highlighted in the 'Regions and Fields' section.

'New Rule' fully configured: when Roles contains "RV_URGENT_RSSP", the Urgent field in the Delivery region is set to "Visible"

Part 7: Configure the "Otherwise" Branch (ELSE – Default: Urgent Hidden)

The "otherwise" branch is the ELSE/default. It applies to all cases not covered by the New Rule – meaning any user who does NOT have the RV_URGENT_RSSP role. You will set the Urgent field to Hidden here.

Step 26: Click on "otherwise" in the Form Rules panel to select it. The otherwise branch does not need any condition – it automatically applies when none of the "New Rule" conditions are met.

"otherwise" branch selected – no conditions need to be set here. This branch applies automatically to all users who do not match the "New Rule" condition above.

Step 27: In the Regions and Fields section of the "otherwise" branch, type "urgent" in the filter box. Find the Urgent field under the Delivery region. Click on it and select "Hidden" to ensure the field is hidden for users without the RV_URGENT_RSSP role.

The screenshot displays the Oracle Delivery Billing configuration interface. On the left, the 'Requisition Line Details' panel shows 'Requisition 204291, Line 5' with various fields like 'Delivery-to Location Type', 'Delivery-to Location', 'Delivery-to Address', 'UN Number', 'UN Number Description', 'Hazard Class', and 'Hazard Class Description'. The 'Billing' section shows a 'Total' of 100 and a 'Total Amount' of \$83.00.

The main area is titled 'Fields and Regions' and shows the 'otherwise' branch configuration. The 'Form Rules' section lists several rules, including 'Project Exists', 'Hide Negotiated By Preparer', 'Hide Negotiation Required', 'Hide Note To Receiver', 'Hide Note To Buyer', 'Show Manufacturer', 'Show SuggestedBuyerId', and 'Default'. The 'Collection Rules' section is empty.

The 'Regions and Fields' section is highlighted with a red box. It shows a table with columns for 'Filter', 'Required', 'Hidden', 'Read Only', and 'Value'. The 'Urgent' field is listed under the 'Delivery' region, and its 'Hidden' status is set to 'True'.

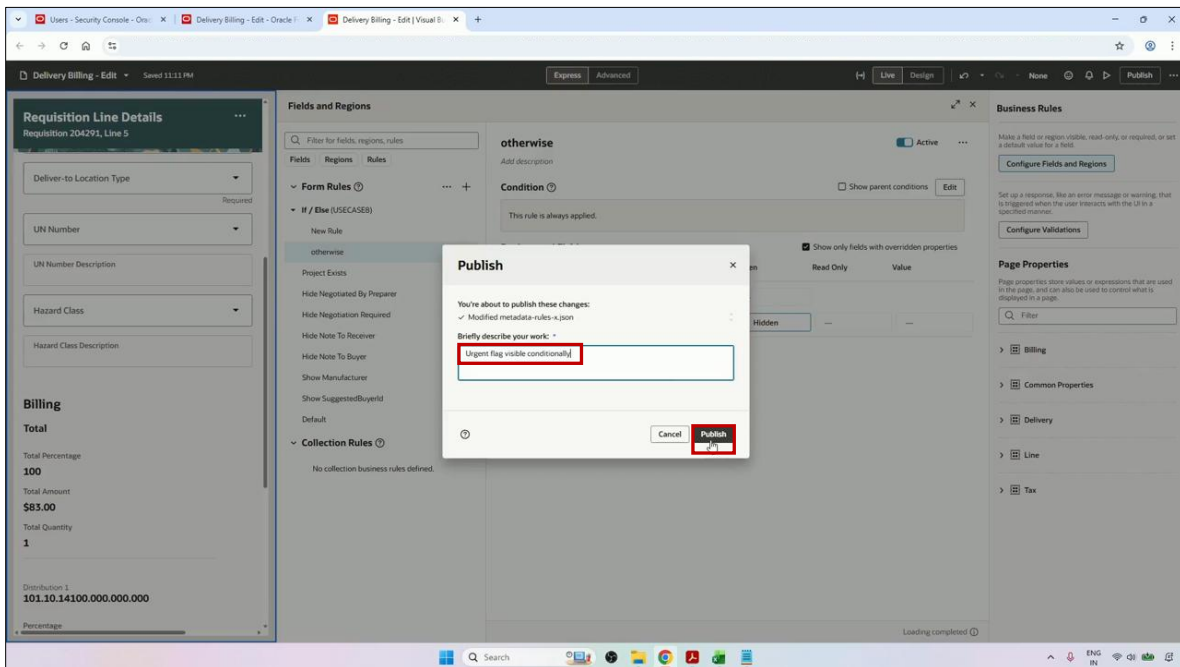

The 'Business Rules' section on the right shows the 'Configure Fields and Regions' button and the 'Page Properties' section.

"otherwise" branch fully configured: the Urgent field is set to "Hidden" as the default for all users who do not have the RV_URGENT_RSSP role

Part 8: Publish the Changes

All business rules are now configured. You must publish the changes to deploy them to the live Oracle Fusion Cloud environment.

Step 28: Click the "Publish" button in the VBS top toolbar. A Publish dialog will appear asking you to describe your changes. Enter a meaningful description – the trainer uses "Urgent flag visible conditionally" – then click "Publish".

Publish dialog – enter the description "Urgent flag visible conditionally" and click "Publish" to deploy the business rule to Oracle Fusion Cloud

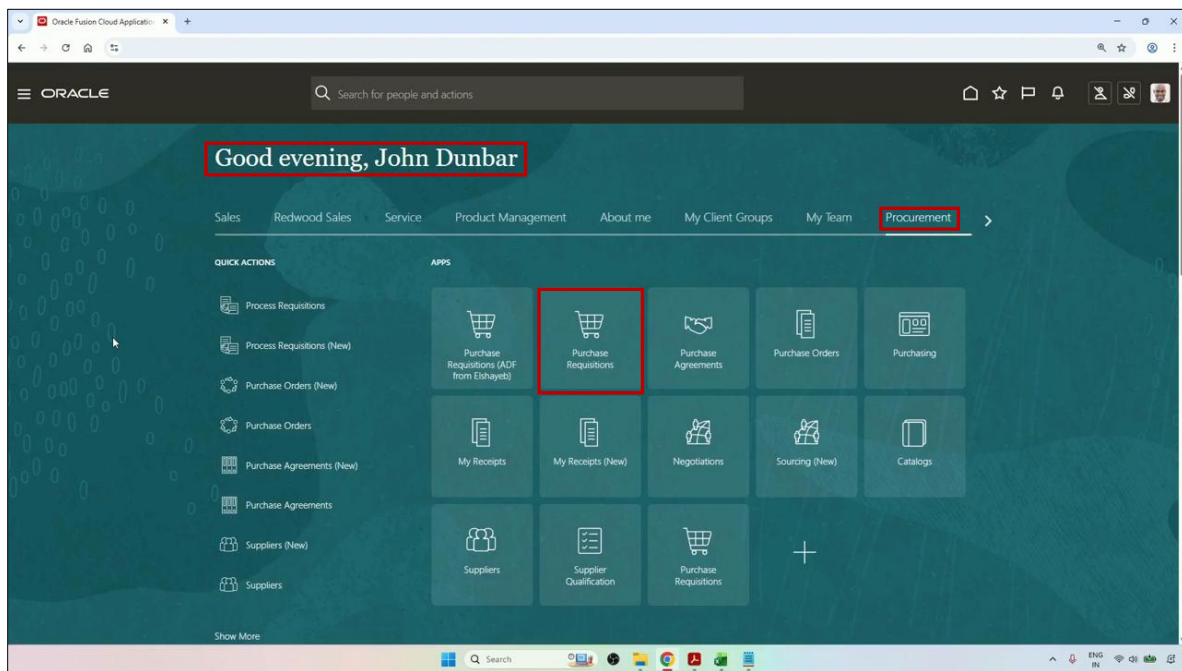

Step 29: After publishing completes, click "Close" on the confirmation message. Then click "Cancel" or close the VBS tab to return to Oracle Fusion Cloud. Click the Home icon to go back to the Oracle Fusion home page.

Note: Publishing deploys your VBS customization immediately. The business rule will take effect the next time any user opens the Delivery and Billing Details page in Self Service Procurement.

Part 9: Test with John Dunbar (User WITH the Role)

John Dunbar has the RV_URGENT_RSSP role. When he opens the Delivery and Billing Details page, the Urgent checkbox should be visible.

Step 30: You are logged in as John Dunbar. From the Oracle Fusion home page, navigate to Procurement. Click on "Purchase Requisitions" or navigate to Self Service Procurement.

Oracle Fusion home page – logged in as John Dunbar. Navigate to Procurement > Purchase Requisitions to begin the test.

Step 31: On the Self-Service Procurement page, click the preferences/action menu and select "Enter Requisition Line".

Self Service Procurement – click the action menu and select "Enter Requisition Line" to create a new requisition line

Step 32: Select an item from the catalogue (e.g., type an item number and select it). Fill in the required details. Click "Create and Continue" to proceed to the Delivery and Billing Details page.

New Requisition Line – select an item and fill in the required fields. Click "Create and Continue" to navigate to Delivery and Billing Details.

Step 33: On the Delivery and Billing Details page, scroll down to the Delivery section. Confirm that the "Urgent" checkbox IS visible. This proves that users with the RV_URGENT_RSSP role can see the field as configured.

The screenshot shows the Oracle Delivery and Billing Details page for Requisition 204291, Line 10. The page includes a header with 'Back', 'Cancel', 'Update and Create New', and 'Update' buttons. The main content area is divided into sections: Delivery, Billing, and Distribution. The Delivery section contains fields for 'Deliver-to Location' (Seattle), 'Deliver-to Address' (411 University Street, Seattle, WA 98101, King, United States), 'UN Number', 'UN Number Description', 'Hazard Class', and 'Hazard Class Description'. A red box highlights the 'Urgent' checkbox, which is currently unchecked. The Billing section shows a table with columns for 'Total Percentage', 'Total Amount', and 'Total Quantity'. The Distribution section shows a table with columns for 'Percentage', 'Amount', and 'Quantity'.

Total Percentage	Total Amount	Total Quantity
100	\$83.00	1

Percentage	Amount	Quantity
100	\$83.00	1

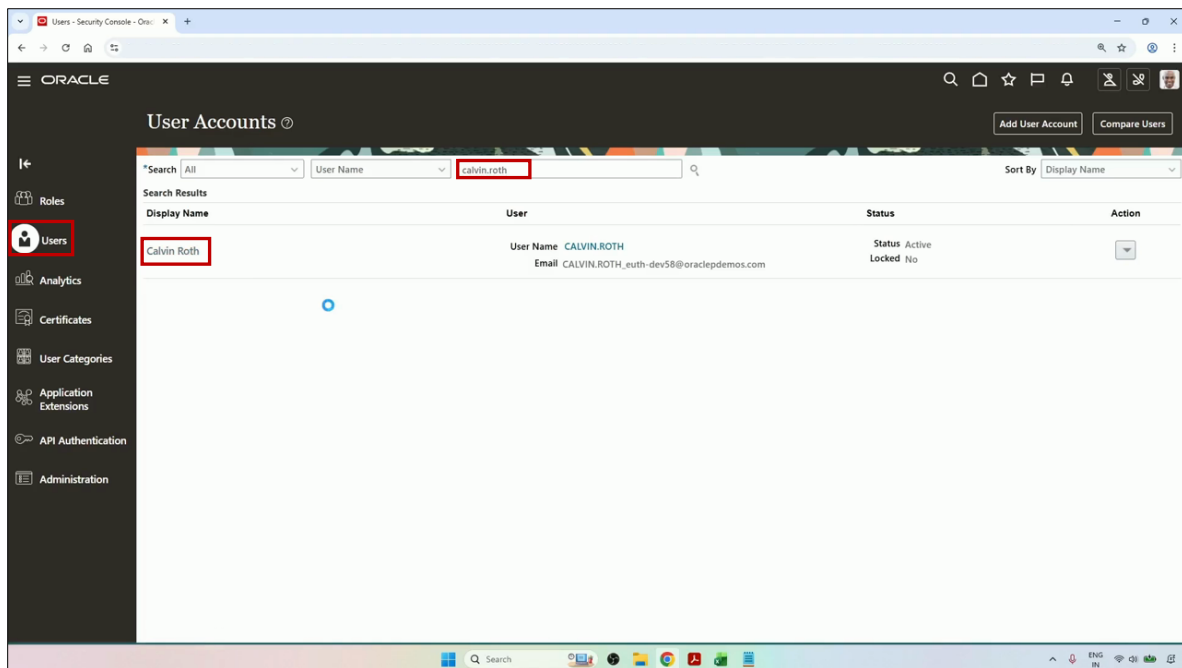

Delivery and Billing Details for John Dunbar – the "Urgent" checkbox IS visible in the Delivery section, confirming the business rule is working correctly for users with the RV_URGENT_RSSP role

Part 10: Verify and Test with Calvin Roth (User WITHOUT the Role)

Calvin Roth does not have the RV_URGENT_RSSP role. First verify this in the Security Console, then log in as Calvin Roth and confirm the Urgent field is hidden.

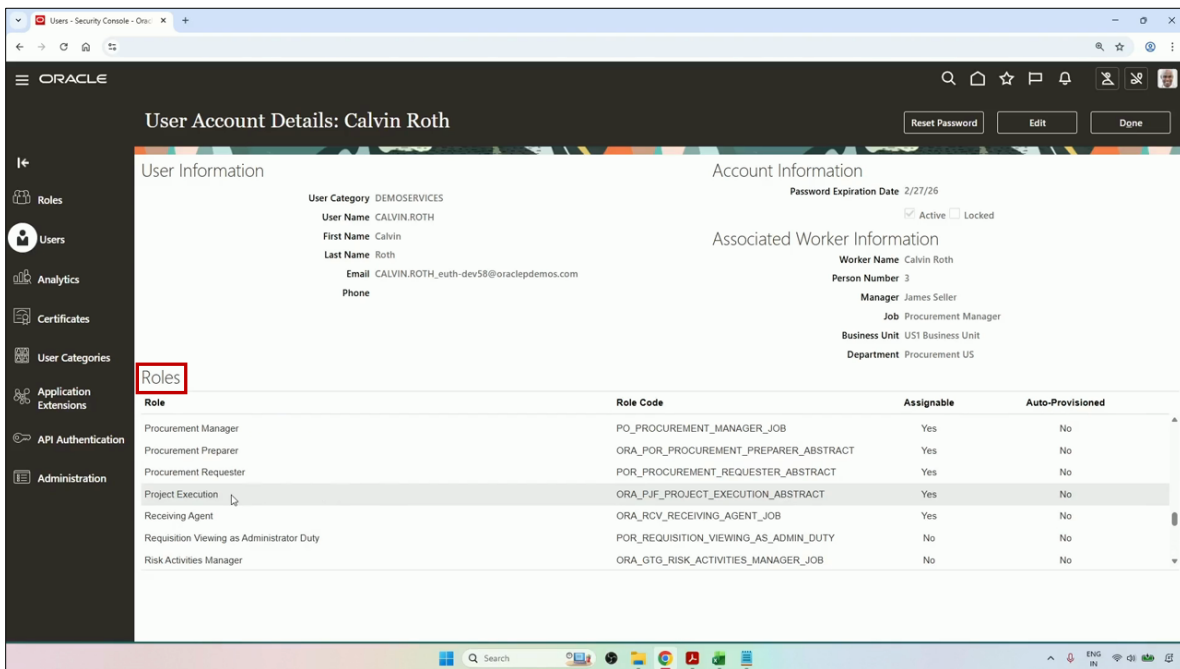

Step A: Verify Calvin Roth Does Not Have the Role

Step 34: Navigate to the Security Console. Click "Users" in the left panel. Search for "Calvin.Roth" and click on Calvin Roth's account to open his User Account Details.

Security Console Users – search for "calvin.roth" to find and open Calvin Roth's account

Step 35: Scroll through Calvin Roth's Roles list. Confirm that "RV_URGENT_RSSP" does NOT appear anywhere in his role assignments. The roles are in alphabetical order – scroll through the "R" section to verify.

User Account Details: Calvin Roth

VMI Redwood for Enterprise	VMI_RW_ENTERPRISE	Yes	No

Calvin Roth's roles continued – scrolling further confirms no RV_URGENT_RSSP role is present. The roles skip directly from Supplier-related roles to Team Collaborator.

Step B: Log In as Calvin Roth

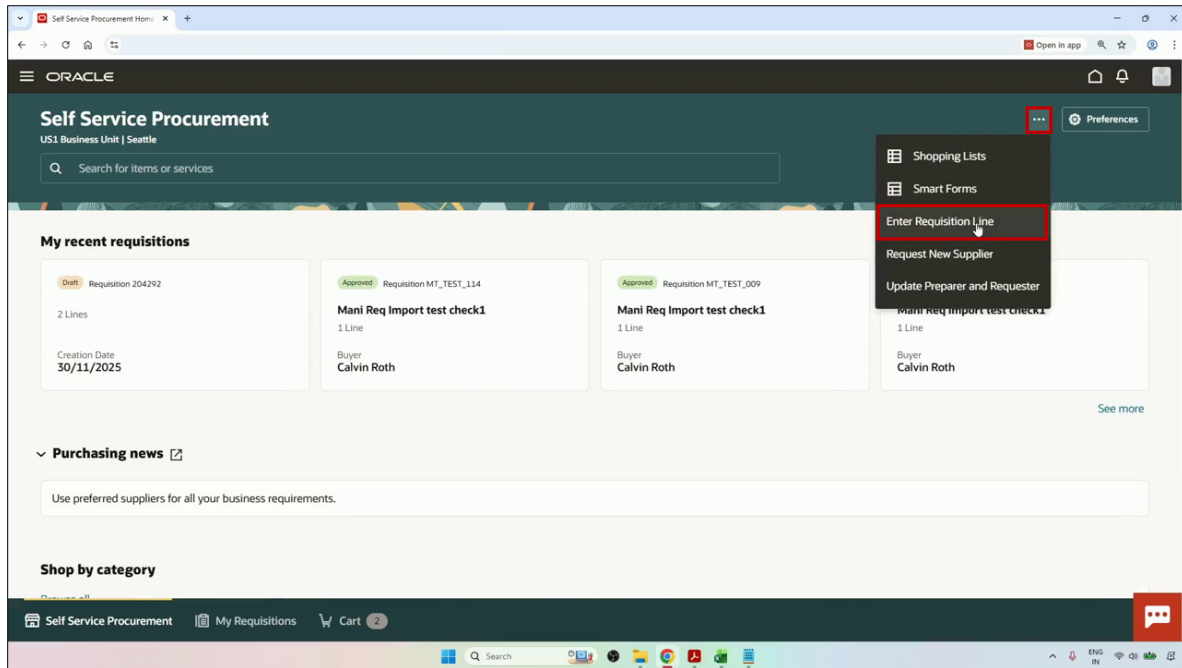

Step 36: Sign out of Oracle Fusion Cloud as John Dunbar. The Oracle Cloud Sign In page will appear. Enter Calvin Roth's credentials (username: CALVIN.ROTH) and click Sign In.

Oracle Cloud Account Sign In page – sign out as John Dunbar and log in with Calvin Roth's credentials

Step C: Test the Delivery and Billing Details Page as Calvin Roth

Step 37: Once logged in as Calvin Roth, navigate to Procurement > Self Service Procurement. Click the action menu and select "Enter Requisition Line".

Self Service Procurement as Calvin Roth – click the action menu and select "Enter Requisition Line" to begin creating a requisition line for testing

Step 38: Select an item, fill in the required details, and click "Create and Continue" to navigate to the Delivery and Billing Details page.

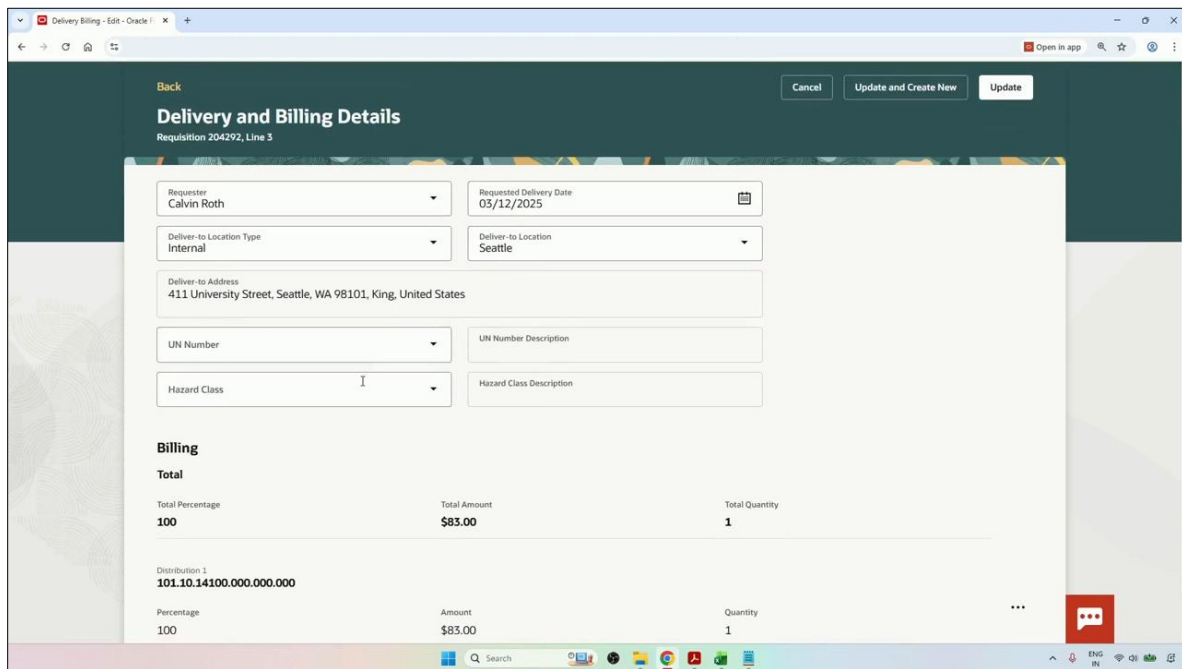

The screenshot displays the Oracle 'Delivery and Billing Details' page for 'Requisition 204292, Line 3'. The main form area contains the following details:

- Line Description:** 1920x1080 STD Resolution Monitor
- Quantity:** 1
- Delivery Section:**
 - Requester:** Calvin Roth
 - Requested Delivery Date:** 03/12/2025
 - Deliver-to Location Type:** Internal
 - Deliver-to Location:** Seattle
 - Deliver-to Address:** 411 University Street, Seattle, WA 98101, King, United States
 - UN Number:** (empty)
 - Hazard Class:** (empty)

Navigation buttons at the top right include 'Cancel', 'Update and Create New', and 'Update'. A red box highlights the 'Delivery and Billing Details' title.

Delivery and Billing Details for Calvin Roth – the Delivery section is visible with Requester showing "Calvin Roth", but notice the "Urgent" checkbox is NOT present anywhere on the page

Step 39: Scroll through the entire Delivery section. Confirm that the "Urgent" checkbox is completely absent. Calvin Roth cannot see the field at all because he does not have the RV_URGENT_RSSP role.

Delivery and Billing Details
Requisition 204292, Line 3

Requester: Calvin Roth
Requested Delivery Date: 03/12/2025
Deliver-to Location Type: Internal
Deliver-to Location: Seattle
Deliver-to Address: 411 University Street, Seattle, WA 98101, King, United States
UN Number:
UN Number Description:
Hazard Class:
Hazard Class Description:
Billing
Total
Total Percentage: 100
Total Amount: \$83.00
Total Quantity: 1

Amount: \$83.00
Quantity: 1

Delivery and Billing Details scrolled – the full Delivery section is shown including UN Number and Hazard Class, but there is NO Urgent checkbox – the business rule is working correctly for Calvin Roth

Summary

You have successfully completed Use Case 8 of the VBS training series. Here is a recap of everything achieved:

- Observed the default state: the Urgent checkbox visible to all users on Delivery and Billing Details.
- Navigated to Oracle Security Console via the Navigator menu (Tools > Security Console).
- Created the custom Job Role "RV_URGENT_RSSP" with Role Category "Common Job Role".
- Assigned the new role to John Dunbar through the Create Role wizard.
- Verified the role appeared in John Dunbar's User Account Details.
- Launched Visual Builder Studio directly from the Oracle Fusion Delivery and Billing Details page by selecting the RV_PROJECT.
- Created an FLS (Field Level Security) Business Rule named "USECASES8" – the FLS type automatically provides "New Rule" (IF) and "otherwise" (ELSE) branches.
- Configured the "New Rule" branch: Roles contains "RV_URGENT_RSSP" → Urgent field = Visible.
- Configured the "otherwise" branch: no condition (fallback) → Urgent field = Hidden.
- Published the changes with description "Urgent flag visible conditionally".
- Tested as John Dunbar (has the role): Urgent checkbox IS visible on Delivery and Billing Details.
- Verified Calvin Roth does not have the RV_URGENT_RSSP role in Security Console.
- Tested as Calvin Roth (no role): Urgent checkbox is NOT visible on Delivery and Billing Details.
