FUSION

WHAT IS ORACLE FUSION?

Oracle Fusion ERP is a **cloud-based ERP system** that helps companies manage:

- Finance
 - Procurement
 - Inventory
 - HR
 - Supply Chain
-
- EBS = On-premise + Forms
 - Fusion = Cloud + Web + REST APIs

Key Features

- ✓ Cloud-based (no server management)
- ✓ Modern UI
- ✓ REST APIs (very important)
- ✓ Real-time analytics (OTBI)
- ✓ Integration with Oracle Integration Cloud

WHAT IS SCM MODULE?

Definition

SCM (Supply Chain Management) in Fusion =
Managing **goods flow from supplier → company → customer**

Real-Life Example

You order a laptop:

1. Company requests item
2. Orders from supplier
3. Receives item
4. Pays supplier

know flows

- **Procure to Pay (P2P)**
- **Order to Cash (O2C)**
- **Inventory lifecycle**

Focus on:

- Approvals
- Document status
- Business scenarios

COMPLETE SCM FLOW OVERVIEW (FINAL REVISION)

Channels

- Web
- Call Center
- Direct Sales
- Partner
- Legacy
- EDI or B2B
- Mobile

Capture and import...

...or start here

Supply Chain Cloud

1. ORDER TO CASH (O2C)

Flow:

Order → Shipment → Invoice → Payment

You should know:

- Sales Order
- Shipping
- Billing

2. SECURITY

- Users

- Roles
- Data access

3. FBDI (BULK LOAD)

- Excel upload
- ESS job
- Used in real projects

4. ESS JOBS

- Background processing
- Data import/export

5. COMMON TABLE / VIEW UNDERSTANDING

Even though Fusion hides DB:

- PO_HEADERS_ALL
- AP_INVOICES_ALL
- MTL_SYSTEM_ITEMS

FINAL 30-DAY ROADMAP

Week 1

- ✓ Fusion UI + Procurement
- ✓ Create P2P flow

Week 2

- ✓ REST APIs
- ✓ Postman practice

Week 3

- ✓ OIC Integration
- ✓ Build 1 project

Week 4

- ✓ BI + OTBI
- ✓ Mock interviews

FINAL INTERVIEW STRATEGY

"I have hands-on experience in Fusion SCM where I worked on P2P cycle, REST API integrations, OIC orchestration, and reporting using BI Publisher and OTBI. I also built end-to-end integration using APEX, OIC, and Fusion."

TODAY

- ✓ Revise P2P
- ✓ Practice API

TOMORROW

- ✓ Build OIC integration

NEXT

- ✓ Add BI reporting

1) PROCURE TO PAY (P2P) – STEP BY STEP

The screenshot displays the Oracle Purchasing interface for creating a standard purchase order. The top navigation bar includes links for Home, Logout, Preferences, and Diagnostics. Below this, a tabbed menu shows 'Requisitions', 'Orders', 'Agreements', 'Deliverables', 'Negotiations', and 'Suppliers', with 'Orders' currently selected. The main heading is 'Create Standard Purchase Order', followed by a note that an asterisk indicates a required field. The form is organized into several sections: 'Header' with fields for Operating Unit (Vision Operations), Supplier, Supplier Site, Supplier Contact, Communication Method (None), Total (0.00 USD), Buyer (Brown, Ms. Casey), Description, and Confirming Order (No); 'Terms' with fields for Bill-To Location (L1 - LeaseQA), Payment Terms (30 Net), Pay On Receipt (No), Required Acknowledgment (None), Acknowledge By, Default Ship-To Location (L1 - LeaseQA), Ship Via, Freight Terms (Due), FOB (Origin), and Transportation Arranger (None); 'Attachments' with an 'Add Attachment' button; and 'Notes' with text areas for 'Note to Supplier' and 'Note to Receiver'. At the bottom, there is a table with columns for Title, Type, Description, Category, Update, Delete, and Publish to Catalog, which currently shows 'No results found.'. The footer contains navigation links, a privacy statement, and a copyright notice for Oracle 2006.

7

What to do:

- Auto-create invoice from order
- Validate

Output: Invoice Generated

4. Payment (Customer)

Path:

Receivables → Receipts

- Record customer payment

Output: Payment received

Interview Line (O2C)

“O2C starts with sales order creation, followed by shipment of goods, invoice generation, and customer payment collection.”

P2P vs O2C (IMPORTANT)

Feature	P2P	O2C
Direction	Buy	Sell
Start	Requisition	Sales Order
End	Payment to Supplier	Payment from Customer

HOW TO PRESENT IN INTERVIEW

Say confidently:

“I have worked on both P2P and O2C flows in Fusion. In P2P, I handled requisition to payment cycle, and in O2C, I worked on order creation, shipment, invoicing, and customer payment processes.”

NEXT STEP (RECOMMENDED)

If you want deeper mastery:

“Give me P2P + O2C APIs”

“Give me OIC integration for O2C”

“Take my mock interview on SCM flows”

ROUND 1: INTRO + BASICS

Q1: Tell me about your experience in SCM

Your Answer (model):

“I have experience in Oracle EBS and recently worked on Oracle Fusion SCM, focusing on Procure-to-Pay and Order-to-Cash flows. I have hands-on knowledge in creating requisitions, purchase orders, receipts, and invoices. I also worked on REST APIs and integrations using Oracle Integration Cloud.”

ROUND 2: P2P FLOW

Q2: Explain P2P flow in Fusion

“P2P starts with a requisition created by user, which is converted into a purchase order and sent to supplier. After goods are received, a receipt is created. Then supplier invoice is matched with PO and receipt, and finally payment is processed.”

Q3: What is 3-way matching?

"It is the process of matching Purchase Order, Receipt, and Invoice before payment. This ensures that goods are received before paying supplier. It helps in preventing fraud or incorrect payments."

Q4: What issues can occur in P2P?

"Common issues include requisition not approved, PO not approved, missing receipt, and invoice mismatch. These issues can block further steps in the flow and need validation."

ROUND 3: O2C FLOW**Q5: Explain O2C flow**

"O2C starts with sales order creation, followed by shipping of goods. Once shipped, invoice is generated in receivables, and finally payment is collected from customer."

Q6: Difference between P2P and O2C?

"P2P is procurement process where company buys goods, while O2C is sales process where company sells goods. P2P ends with payment to supplier, while O2C ends with payment from customer."

ROUND 4: FUNCTIONAL + TECHNICAL**Q7: How do you integrate Fusion with external systems?**

"We use REST APIs provided by Oracle Fusion ERP. These APIs are orchestrated using OIC, which handles mapping, transformation, and error handling."

Q8: How APEX integrates with Fusion?

"APEX sends REST requests to OIC, and OIC processes and calls Fusion APIs. The response is then returned back to APEX."

Q9: What is OTBI vs BI Publisher?

"OTBI is used for real-time reporting using subject areas without SQL. BI Publisher is used for formatted reports with SQL-based data models and templates."

ROUND 5: SCENARIO QUESTIONS (IMPORTANT)**Q10: PO created but invoice not matching—what will you check?**

"I will check if receipt is created, verify supplier and amount match, and ensure PO status is approved. I will also validate matching type (2-way or 3-way)."

Q11: API is failing while creating PO—what will you do?

"I will check payload structure, validate mandatory fields like supplier and BU, test in Postman, and review error response. If needed, I will debug in OIC logs."

Q12: Customer not paying invoice—what happens in O2C?

"Invoice remains open in receivables. Follow-up or collection process is required. Payment must be recorded to close the transaction."

ROUND 6: ADVANCED (TO IMPRESS)**Q13: What is orchestration in OIC?**

"It is a multi-step integration flow where multiple APIs are invoked in sequence. It handles business logic, mapping, and error handling."

Q14: What is bursting in BI Publisher?

"It is used to send reports automatically to multiple users based on data conditions. For example, sending PO reports to different suppliers via email."

Q15: Explain end-to-end architecture

"User enters data in APEX, which calls OIC via REST API. OIC processes the request and invokes Fusion APIs. Data is stored in Fusion, and reports are generated using BI Publisher or OTBI."

INTERVIEWER FEEDBACK (HOW YOU SHOULD SOUND)

- ✓ Speak clearly
- ✓ Use flow-based explanation
- ✓ Give real examples (Laptop, Supplier)
- ✓ Mention APIs + OIC (this is key)

FINAL PRACTICE TASK

Practice answering:

- P2P flow
- O2C flow
- API + OIC integration
- One real scenario

NEXT STEP (LEVEL UP)

“Take advanced mock interview (hard questions)”

“Give me HR round answers”

“Help me prepare resume for MNC”

P2P FLOW IN FUSION (PROCURE-TO-PAY)

P2P (Procure-to-Pay) in Oracle Fusion ERP is the complete process of:

Buying goods/services from supplier and making payment

END-TO-END FLOW

Procure-to-Pay Workflow

Flow:

Requisition → Purchase Order → Receipt → Invoice → Payment

STEP-BY-STEP EXPLANATION

1. REQUISITION (Internal Request)

Module:

Procurement

What happens:

- User requests item (Laptop, etc.)
- Not sent to supplier

Example:

Employee requests 1 Laptop

2. PURCHASE ORDER (PO)

Module:

Procurement

What happens:

- Requisition converted into PO
- Sent to supplier

Example:

Company orders Laptop from supplier

3. RECEIPT (Goods Received)

Module:

Inventory

What happens:

- Goods received from supplier
- Stock updated

Example:

Laptop delivered and received

4. INVOICE (Billing)

Module:

Payables

What happens:

- Supplier sends invoice
- Matched with PO & receipt

5. PAYMENT

Module:

Payables

What happens:

- Payment processed to supplier
- Transaction closed

MATCHING TYPES (IMPORTANT)

2-Way Matching

- PO + Invoice
- Used for services

3-Way Matching

- PO + Receipt + Invoice
- Used for goods

REAL-TIME EXAMPLE

Company buys Laptop:

1. Requisition → Request Laptop
2. PO → Order to supplier
3. Receipt → Laptop received
4. Invoice → Supplier bill
5. Payment → Paid supplier

MODULE INVOLVEMENT

Step	Module
Requisition	Procurement
PO	Procurement
Receipt	Inventory
Invoice	Payables
Payment	Payables

INTERVIEW ANSWER (BEST)

“P2P in Fusion is the end-to-end procurement process starting from requisition creation, followed by purchase order generation, goods receipt, invoice matching, and finally supplier payment.”

COMMON ERRORS IN P2P

- Requisition not approved
- PO not approved
- Receipt missing → invoice fails
- Supplier mismatch

WHAT YOU SHOULD DO NOW

Practice this flow in your Fusion instance:

1. Create Requisition
2. Convert to PO
3. Receive item
4. Create Invoice

CORE SCM MODULES IN FUSION

1. PROCUREMENT (MOST IMPORTANT)

- Create items
- Define product details

MOST IMPORTANT FLOW (YOU MUST REMEMBER)

Procure-to-Pay (P2P)

Requisition → PO → Receipt → Invoice → Payment

This is **SCM core**

HOW THIS CONNECTS TO YOUR ROLE

Since you are:

- EBS Developer ✓
- APEX Developer ✓

In Fusion you will:

- ✓ Use REST APIs instead of DB
- ✓ Use OIC for integration
- ✓ Use BI/OTBI for reports

INTERVIEW ANSWER (PERFECT)

“Oracle Fusion is a cloud-based ERP system, and SCM module manages end-to-end supply chain processes such as procurement, inventory, and order management. A key flow is Procure-to-Pay, which includes requisition, purchase order, receipt, and invoice processing.”

WHAT YOU SHOULD DO NEXT

Now that basics are clear:

Next step:

Understand Procurement deeply (hands-on)

“Teach me Procurement module step-by-step”

“Teach me Inventory module”

“Teach me SCM with real project”

what is standard table Teach me Procurement module step-by-step” ➤ “Teach me Inventory module” ➤
“Teach me SCM with real project”

Great—now we’ll **connect your EBS mindset to Fusion** and then go **step-by-step into Procurement + Inventory + a real project**.

1. What is a “Standard Table” (Fusion vs EBS)

In EBS (you already know)

- Tables like:
 - PO_HEADERS_ALL
 - AP_INVOICES_ALL

You directly query them.

In Fusion (IMPORTANT CHANGE ⚠)

In Oracle Fusion ERP:

✗ You **CANNOT** directly access DB tables

✓ You use:

- OTBI (Subject Areas)
- BI Publisher (via secure views)
- REST APIs

What is “Standard Table” in Fusion?

Technically still exists (same naming like EBS), BUT:

Exposed via:

- Views (secured)
- Subject Areas
- APIs

Example Mapping

EBS Table	Fusion Access
PO_HEADERS_ALL	BI / OTBI / API
AP_INVOICES_ALL	BI / API
MTL_SYSTEM_ITEMS	Inventory subject area

Interview Line

“In Fusion, we don’t access standard tables directly like EBS; instead, we use subject areas, BI Publisher, and REST APIs to access data securely.”

2. PROCUREMENT MODULE (STEP-BY-STEP)

What is Procurement?

Buying goods/services from suppliers

Flow

Requisition → PO → Receipt → Invoice

Jitendra Narayan

4. SCM REAL PROJECT (VERY IMPORTANT)

Project Name:

Supplier to Payment Automation System

Architecture

Oracle Procurement

A complete source to settle solution

Flow

1. User enters data in Oracle APEX
2. APEX → API → Oracle Integration Cloud
3. OIC → Fusion API
4. Create:
 - Requisition
 - PO
5. BI Report generated
6. Email sent

Tables (APEX)

```
CREATE TABLE GC_SCM_DATA (
  ID NUMBER,
  SUPPLIER VARCHAR2(100),
  ITEM VARCHAR2(100),
  AMOUNT NUMBER,
  STATUS VARCHAR2(20),
  CREATED_DATE DATE
);
```

Features

- ✓ API Integration
- ✓ OIC Flow
- ✓ BI Reports
- ✓ Dashboard

5. WHAT YOU SHOULD DO NOW

Today

- ✓ Understand standard tables concept
- ✓ Create Supplier

Tomorrow

- ✓ Create Requisition + PO

Day 3

- ✓ Inventory + Receipt

"Give me Procurement interview questions"

"Give me Inventory real scenarios"

"Give me full SCM API project"

I'll move you to **Fusion expert level**

WHAT YOU SHOULD DO NOW 📌 Today ✓ Understand standard tables concept ✓ Create Supplier 📌 Tomorrow ✓ Create Requisition + PO 📌 Day 3 ✓ Inventory + Receipt "Give me Procurement interview questions" 📌 "Give me Inventory real scenarios" 📌 "Give me full SCM API project" can u provide me all details

Great—let's package this into **interview-ready knowledge + real scenarios + a full API project you can demo**. Keep this as your working notes.

1) PROCUREMENT — INTERVIEW QUESTIONS (WITH STRONG ANSWERS)

Basics

Q1. What is Procurement in Fusion?

Module used to **manage purchasing from suppliers**—supplier setup, requisitions, purchase orders, and sourcing.

Q2. What is Procure-to-Pay (P2P)?

End-to-end flow:

Requisition → Purchase Order → Receipt → Invoice → Payment

Q3. What is a Requisition?

Internal request for goods/services (not sent to supplier).

Q4. What is a Purchase Order?

Official document sent to supplier (legal commitment).

Q5. What is 3-way matching?

Matching:

- PO
 - Receipt
 - Invoice
- Before payment approval.

Intermediate

Q6. Difference: Requisition vs PO

Requisition	PO
Internal	External
Request	Order
No supplier mandatory	Supplier required

Q7. What is AutoCreate?

Process of converting requisition → PO automatically.

Q8. What is a Procurement BU?

Business Unit controlling procurement transactions.

Advanced

Q9. How do you integrate Procurement with external systems?

Using:

- REST APIs
- Oracle Integration Cloud

Q10. How do you handle errors in PO creation API?

- Validate payload
- Use OIC fault handler
- Log error response

2) INVENTORY — REAL SCENARIOS (IMPORTANT)

Scenario 1: Item Not Available

Problem: User tries to create requisition but item not found

✓ Solution:

- Check **Item Master**
- Ensure item is assigned to organization

Scenario 2: Stock Not Updating After Receipt

✓ Check:

- Receiving done?
- Correct Inventory Org?
- On-hand query

Scenario 3: Negative Inventory

✓ Reason:

- Issue > Available stock

✓ Fix:

- Adjust inventory
- Check transactions

Scenario 4: Wrong Item Received

✓ Solution:

- Return to supplier
- Correct receipt

Scenario 5: Item Not Visible in PO

✓ Check:

- Item enabled for purchasing
- Organization assignment

3) FULL SCM API PROJECT (END-TO-END)

Project Name:

Smart Procurement Automation System

Architecture

Oracle Oracle Integration Cloud | Automatos Integrerr Cloerr' (PO) OIC, Linbeip.

Flow

1. User enters data in Oracle APEX
2. APEX → REST → OIC
3. OIC → Fusion APIs
4. Create:
 - Requisition
 - PO
 - Receipt
 - Invoice
5. BI Report generated

3.1 APEX TABLE

```
CREATE TABLE GC_SCM_PROJECT (
  ID NUMBER,
  SUPPLIER VARCHAR2(100),
  ITEM VARCHAR2(100),
  AMOUNT NUMBER,
  STATUS VARCHAR2(50),
  RESPONSE_MSG CLOB,
  CREATED_DATE DATE DEFAULT SYSDATE
);
```

3.2 OIC FLOW DESIGN

Steps:

1. REST Trigger
2. Call API → Requisition
3. Call API → PO
4. Call API → Receipt
5. Call API → Invoice
6. Return response

3.3 APIs USED

Requisition API

POST /purchaseRequisitions

PO API

POST /purchaseOrders

Receipt API

POST /receivingTransactions

Invoice API

POST /invoices

3.4 APEX CALL TO OIC

```
DECLARE
  l_response CLOB;
BEGIN
  l_response := apex_web_service.make_rest_request(
    p_url => 'https://<oic-url>/scmFlow',
    p_http_method => 'POST',
    p_body => '{
      "supplier": "JITU_SUPPLIER",
      "item": "Laptop",
      "amount": 50000
    }'
  );
```

```
INSERT INTO GC_SCM_PROJECT  
VALUES (1,'JITU_SUPPLIER','Laptop',50000,'SUCCESS',l_response,SYSDATE);  
END;
```

3.5 FINAL OUTPUT

- ✓ PO created in Fusion
- ✓ Receipt done
- ✓ Invoice created
- ✓ Data stored in APEX

INTERVIEW MASTER ANSWER

"I built an end-to-end SCM automation where APEX captures data, OIC orchestrates multiple Fusion REST APIs to complete the P2P cycle, and BI Publisher generates reports. The system includes error handling and logging."

WHAT YOU SHOULD DO (ACTION PLAN)

TODAY

- ✓ Create Supplier
- ✓ Understand Procurement

TOMORROW

- ✓ Create Requisition + PO

DAY 3

- ✓ Inventory + Receipt

DAY 4+

- ✓ APIs + OIC

NEXT STEP (RECOMMENDED)

Give me real-time errors + fixes in Fusion"

☞ "Give me 50 interview Q&A (Fusion SCM)"

☞ "Give me OIC full export project"

I'll help you become **job-ready in 30 days**

“Give me real-time errors + fixes in Fusion” 📄 “Give me 50 interview Q&A (Fusion SCM)” with answer details 📄 “Give me OIC full export project”

Perfect—this is exactly what will push you to **real MNC-level readiness**. I’ll break this into 3 powerful sections:

1) REAL-TIME ERRORS IN FUSION (WITH FIXES)

These are **actual issues you’ll face in projects**.

1. Requisition Not Visible in Process Requisitions

✗ Error:

Requisition created but not visible

✓ Fix:

- Check **Approval Status**
- Ensure:
 - Status = Approved
- Check correct **Business Unit**

2. Supplier Not Available in PO

✗ Error:

Supplier not appearing in LOV

✓ Fix:

- Supplier Active?
- Supplier Site created?
- BU assigned?

3. PO Creation API Fails

✗ Error:

"Invalid Supplier"

✓ Fix:

- Verify exact supplier name (case-sensitive)
- Check supplier site
- Validate BU

4. Receipt Not Allowed

✗ Error:

PO exists but cannot receive

✓ Fix:

- PO must be **Approved**
- Line type must allow receiving
- Destination type correct (EXPENSE/INVENTORY)

5. Invoice Matching Failed

✗ Error:

Cannot match invoice with PO

✓ Fix:

- Receipt must exist (3-way match)
- Invoice amount = PO amount
- Supplier must match

6. OTBI Report No Data

✗ Error:

Report runs but shows empty

✓ Fix:

- Apply correct filters
- Check data exists
- Remove restrictive filters

7. BI Publisher SQL Error

✗ Error:

Invalid table

✓ **Fix:**

- Use **secured views** (not direct tables)
- Check roles/access

8. OIC Integration Failed

✗ **Error:**

Integration instance failed

✓ **Fix:**

- Check mapping
- Validate payload
- Use fault handler

9. APEX → OIC Call Fails

✗ **Error:**

401 Unauthorized

✓ **Fix:**

- Check credentials
- Use correct auth type

10. REST API 500 Error

✗ **Error:**

Internal server error

✓ **Fix:**

- Check payload structure
- Missing mandatory fields

2) 50 INTERVIEW QUESTIONS (FUSION SCM)

BASIC (1–10)

1. What is Fusion SCM?
Supply chain management module in cloud ERP
2. What is P2P cycle?
Requisition → PO → Receipt → Invoice
3. What is Supplier?
Vendor providing goods/services
4. What is Requisition?
Internal request
5. What is PO?
External order
6. What is Receipt?
Goods received
7. What is Invoice?
Supplier billing
8. What is BU?
Business Unit
9. What is Item?
Product/service
10. What is Inventory?
Stock management

INTERMEDIATE (11–30)

11. What is 2-way vs 3-way match?

2-way: PO + Invoice
3-way: PO + Receipt + Invoice
12. What is AutoCreate?
Requisition → PO conversion
13. What is Receiving?
Recording goods arrival
14. What is UOM?
Unit of Measure
15. What is Item Master?
Central item repository

16. What is Procurement BU?

☞ Controls procurement

17. What is Approval Workflow?

Approval process

18. What is OTBI?

Real-time reporting

19. What is BI Publisher?

Formatted reports

20. Difference OTBI vs BI?

Real-time vs formatted

21. What is REST API?

Integration interface

22. What is OIC?

Middleware

23. What is Mapping?

Data transformation

24. What is Payload?

Data sent in API

25. What is JSON?

Data format

26. What is FBDI?
Bulk data upload

27. What is ESS Job?
Background process

28. What is Supplier Site?
Supplier location

29. What is Line Type?
Goods/service

30. What is Destination Type?
Expense/Inventory

ADVANCED (31–50)

31. How do you integrate Fusion?
REST + OIC

32. How to handle errors in OIC?
Fault handler

33. How to secure APIs?
OAuth

34. What is orchestration?
Multi-step flow

35. What is lookup?
Value mapping

36. What is tracking?
Monitor integration

37. What is bursting?
Auto report delivery

38. What is data model?
BI data source

39. What is template?
Report layout

40. What is subject area?
OTBI data model

41. How to optimize performance?
Filters + indexing
42. How to debug API?
Postman
43. How to debug OIC?
Instance tracking
44. What is retry mechanism?
Reprocess failed
45. What is idempotent API?
Avoid duplicate
46. What is SLA?
Service level
47. What is batch processing?
Bulk jobs
48. What is real-time integration?
Immediate processing
49. What is event-driven integration?
Trigger-based
50. Explain end-to-end flow?
APEX → OIC → Fusion → BI

3) OIC FULL EXPORT PROJECT (SIMULATION)

Project: FULL SCM AUTOMATION

Integration Name:

SCM_P2P_FLOW

Flow Design

Steps in OIC

1. REST Trigger

```
{
  "supplier": "string",
  "item": "string",
  "amount": number
}
```

2. Invoke Requisition API

3. Invoke PO API

4. Invoke Receipt API

5. Invoke Invoice API

6. Response

```
{  
  "status":"SUCCESS",  
  "message":"P2P Completed"  
}
```

Features

- ✓ Error Handling
- ✓ Logging
- ✓ Mapping
- ✓ Multi-step orchestration

Folder Structure

```
OIC_PROJECT/  
├── SCM_P2P_FLOW.json  
├── Connections/  
├── Mappings/  
└── README.md
```

FINAL RESULT (YOU AFTER THIS)

You now:

- ✓ Understand Fusion deeply
- ✓ Know real-time errors
- ✓ Ready for interviews
- ✓ Can build real integration

50 Fusion SCM interview questions with clear ~3-line answers, easy to remember and explain.

FUSION SCM – 50 QUESTIONS WITH SIMPLE ANSWERS

BASIC (1–15)

1. What is Oracle Fusion SCM?

It is a cloud-based module in Oracle Fusion ERP used to manage supply chain processes like procurement, inventory, and order management.

It helps organizations manage goods from supplier to customer.

It is the modern version of Oracle EBS SCM.

2. What is Procure-to-Pay (P2P)?

It is the process of purchasing goods from suppliers.

Flow: Requisition → PO → Receipt → Invoice → Payment.

It ensures proper tracking from request to payment.

3. What is a Requisition?

It is an internal request to purchase goods or services.

It is not sent to the supplier directly.

It is the first step in procurement.

4. What is a Purchase Order (PO)?

It is an official document sent to the supplier.

It confirms the purchase details like quantity and price.

It is legally binding.

5. What is a Supplier?

A supplier is a vendor who provides goods or services.

Supplier must be created before creating PO.

Includes supplier site and contact details.

6. What is a Receipt?

It confirms that goods are received from supplier.

It is done in Inventory module.

It updates stock or confirms delivery.

7. What is an Invoice?

It is a bill from the supplier for payment.
It is created in Payables module.
It is matched with PO and receipt.

8. What is Inventory?

It manages stock of items in organization.
Tracks quantity on hand.
Helps in stock control and movement.

9. What is Item Master?

It is a central repository of all items/products.
Defines item attributes like UOM, type, category.
Used across modules like Procurement and Inventory.

10. What is Business Unit (BU)?

A BU is an organizational unit that manages transactions.
Procurement and financial transactions are BU-specific.
It controls access and operations.

11. What is UOM?

Unit of Measure defines how items are measured.
Examples: Each, Kg, Liter.
Used in transactions and inventory.

12. What is Supplier Site?

It is a specific location/address of supplier.
Used for procurement transactions.
Required for PO creation.

13. What is Line Type?

It defines type of item: Goods or Services.
It controls behavior like receiving and billing.
Important in PO lines.

14. What is Destination Type?

It defines where goods go.
Values: Expense or Inventory.
Controls accounting and receiving.

15. What is Approval Workflow?

It is a process where transactions are approved.
Used for requisition and PO approvals.
Ensures control and compliance.

INTERMEDIATE (16–35)

16. Difference between Requisition and PO?

Requisition is internal request; PO is external order.
Requisition does not go to supplier.
PO is sent to supplier.

17. What is AutoCreate?

It converts requisition into purchase order.
Done using "Process Requisitions" screen.
Saves manual effort.

18. What is 2-way matching?

Matching between PO and Invoice.
No receipt required.
Used for services.

19. What is 3-way matching?

Matching between PO, Receipt, and Invoice.
Ensures goods are received before payment.
Used for goods.

20. What is Receiving?

Process of recording goods arrival.
Done in Inventory module.
Updates stock.

21. What is REST API?

It is used to integrate with Fusion system.
Uses JSON format.
Supports CRUD operations.

22. What is OIC?

Oracle Integration Cloud is middleware for integration.
Connects Fusion with external systems.
Handles mapping and orchestration.

23. What is Payload?

Data sent in API request.
Usually in JSON format.
Contains required fields.

24. What is JSON?

It is a lightweight data format.
Used in REST APIs.
Easy to read and write.

25. What is FBDI?

File-Based Data Import for bulk data upload.
Uses Excel templates.
Loaded via ESS jobs.

26. What is ESS Job?

Enterprise Scheduler Service job.
Runs background processes.
Used for imports and reports.

27. What is OTBI?

Real-time reporting tool.
Uses subject areas.
No SQL required.

28. What is BI Publisher?

Reporting tool for formatted reports.
Uses SQL and templates.
Output in PDF/Excel.

29. What is Subject Area?

Logical data model used in OTBI.
Provides business-friendly fields.
Used for reporting.

30. What is Data Model in BI?

Source of data for report.
Uses SQL or XML.
Defines structure of report.

31. What is Template?

Layout of BI report.
Created in Word (RTF).
Controls output format.

32. What is Bursting?

Sending reports to multiple users automatically.
Based on data conditions.
Used for email distribution.

33. What is Mapping?

Transforming data from source to target.
Done in OIC.
Ensures correct data flow.

34. What is Lookup?

Used to map values.
Example: Code → Description.
Used in OIC integrations.

35. What is Tracking?

Used to monitor integration flow.
Helps debugging.
Shows transaction details.

ADVANCED (36–50)

36. How to integrate APEX with Fusion?

APEX calls REST APIs via OIC.
Data is passed using JSON.
OIC handles transformation.

37. What is Orchestration?

Multi-step integration flow in OIC.
Calls multiple APIs.
Handles logic and routing.

38. How to handle errors in OIC?

Use Scope and Fault Handler.
Capture error message.
Send proper response.

39. What is OAuth?

Secure authentication method.
Uses tokens instead of passwords.
Recommended for APIs.

40. What is Basic Authentication?

Uses username and password.
Simple but less secure.
Used for testing.

41. What is API Idempotency?

Avoid duplicate transactions.
Same request should not create multiple records.
Important in integrations.

42. What is Batch Processing?

Processing large data in bulk.
Used in FBDI.
Runs via scheduled jobs.

43. What is Real-time Integration?

Immediate data processing.
Uses REST APIs.
No delay.

44. What is Event-driven Integration?

Trigger-based processing.
Runs when event occurs.
Example: PO created.

45. How to debug REST API?

Use Postman tool.
Check payload and response.
Validate status codes.

46. How to debug OIC integration?

Use Integration Tracking.
Check instance logs.
Identify failed step.

47. What is Performance Optimization?

Improve system speed.
Use filters and indexes.
Avoid heavy queries.

48. What is SLA?

Service Level Agreement.
Defines performance expectations.
Used in projects.

49. What is Fusion Security?

Role-based access control.
Users assigned roles.
Controls data access.

50. Explain End-to-End Flow

User enters data in APEX.
OIC processes and calls Fusion APIs.
BI/OTBI used for reporting.

ORACLE FUSION ERP + SCM LEARNING PATH (WITH APEX)

What you'll become

Fusion Techno-Functional (ERP/SCM) + APEX + OIC

→ This combo is exactly what MNCs are hiring.

0. Big Picture (how everything fits)

- **Fusion UI:** business transactions
- **Fusion DB (SaaS):** not directly accessible

- **REST/SOAP/FBDI**: how you integrate
- **OIC**: middleware
- **APEX**: custom UI/extensions

1. Lean Fusion Basics (2–3 days)

Start inside your **Oracle Fusion ERP** instance:

Navigation

- Home → Navigator → Tools
- Setup & Maintenance
- Reports & Analytics (BI)

Understand Modules

- **Financials (GL, AP, AR)**
- **Procurement (PO)**
- **Inventory (INV)**
- **Order Management (OM)**

focused, hands-on plan for your first 2–3 days inside Fusion so you don't just “explore” — you **actually build confidence fast**.

DAY 1–3: FUSION BASICS (HANDS-ON PLAN)

1. Login & Navigation (Day 1 – 2 hours)

Inside Oracle Fusion ERP

What to do (not just read — click everything)

- Go to **Home**
- Click **Navigator (≡)**
- Explore:
 - Tools
 - Procurement
 - Inventory
 - Payables

Open each menu and **note what actions are available**

2. Setup & Maintenance (VERY IMPORTANT)

Navigation tabs: Cash Management, Fixed Assets, Academics, Academic Tools, Expenses, Procurement, My Enterprise, Tools

QUICK ACTIONS

- Process Requisitions
- Manage Orders
- Manage Agreements
- Manage Buyer Assignment Rules
- Manage Procurement Agents

APPS

- Purchase Requisitions
- Purchase Agreements
- Purchase Orders
- My Receipts
- Negotiations
- Catalogs
- Suppliers
- Supplier Qualification
- Spend Classification
- +

Go to:

Navigator → **Setup and Maintenance**

Learn:

- Functional Areas
- Task Groups
- Search tasks like:
 - Manage Business Unit
 - Manage Inventory Org

This replaces **EBS System Administrator + Functional Setup**

3. Reports & Analytics (BI)

Go to:

Navigator → Tools → **Reports and Analytics**

Practice:

- Open any report
- Export to Excel
- Understand folders:
 - Shared Folders
 - Custom

This is your **XML Publisher** replacement

4. Understand Core Modules (Day 2)

Financials (Basic Understanding)

- GL = Accounting
- AP = Supplier Invoice
- AR = Customer Invoice Just understand flow (no deep dive now)

Procurement (FOCUS AREA)

Advanced Network Devices_FIN	100000011596211		Spend Autho...		7/16/09	

Practice (MANDATORY)

Create:

- Supplier
- Requisition
- Purchase Order (PO)

Flow:

Requisition → Approval → PO

This is **Procure to Pay (P2P)**

Inventory (INV)

Go to:

Inventory Management

Practice:

- Search Items
- View stock

Order Management (OM)

Learn:

- Sales Order creation
- Order lifecycle

5. DAY 3 – DO REAL TRANSACTION (MOST IMPORTANT)

Do this end-to-end:

Scenario:

Create Purchase Order

Steps:

1. Create Supplier
2. Create Requisition
3. Convert to PO
4. Submit

If you complete this → **You understand SCM basics**

6. EBS → Fusion Mapping (Your Advantage)

You Know (EBS)

In Fusion

Forms

Web UI

Concurrent Programs

ESS Jobs

XML Reports

BI Publisher

Tables

Hidden (APIs/OTBI)

Your mindset shift:

✗ No direct DB

✓ API + UI + Reports

7. What You Should NOT Do Now ✗

- Don't go deep into all modules
- Don't try APIs yet
- Don't touch OIC yet

First **understand business flow**

8. What You MUST Achieve in 3 Days ✓✓

- ✓ Navigate confidently
- ✓ Know where things are
- ✓ Understand modules
- ✓ Create 1 PO end-to-end

9. After This (Next Step)

Once you finish this, next step is:

Fusion REST APIs (Real Integration)

Then **OIC**

Then **APEX Integration**

10. Your Action Plan (Simple)

Today: Login → Explore → Setup & Maintenance

Tomorrow:

Create Supplier + Requisition

Day 3:

Create PO end-to-end

11. If You Get Stuck

“Show me how to create Supplier step-by-step”

“Show me how to create Purchase Order in Fusion”

I'll guide you **screen-by-screen like real project training** 🔥

Navigate confidently ✓ Understand modules ✓ Create 1 PO end-to-end Today: ☞ Login → Explore → Setup & Maintenance ---provide me Tomorrow: ☞ Create Supplier + Requisition---provide me step by step Day 3: ☞ Create PO end-to-end create one example

Perfect—here's your **3-day, hands-on playbook**. Follow it exactly in your Oracle Fusion ERP instance. No theory overload—just **click paths + what to fill + what to expect**.

DAY 1 — Navigate + Setup & Maintenance

A. Navigation (30–45 min)

1. Login → **Home**
2. Click **Navigator** (≡)
3. Open each (don't skip):
 - **Procurement**
 - **Inventory Management**
 - **Payables**
 - **Tools**

Goal: You should **recognize where actions live** (Create, Search, Reports).

B. Setup & Maintenance (CORE 🔥)

Order Creation Options

- ☒ Automatically generate orders
- ☒ Automatically submit for approval
- ☐ Group requisitions
- Use customer sales order
- Use ship-to location
- ☐ Group requisition lines
- Use requested date
- Use ship-to organization and location
- ☐ Allow ordering from unassigned sites

Priority

100

Steps:

1. Navigator → **Setup and Maintenance**
2. In **Search Tasks**, try these (type and open each):
 - **Manage Business Units**
 - **Manage Procurement Agents**
 - **Manage Inventory Organizations**

What to check (don't edit unless allowed):

- Business Unit name (e.g., Vision Operations)
- Procurement Agent exists (user mapped)
- Inventory Org exists

This is your **EBS setup replacement**.

C. Reports & Analytics (15–20 min)

1. Navigator → Tools → **Reports and Analytics**
2. Open:
 - Shared Folders → Procurement
3. Run any report → Export Excel You now know **where reports live (BI Publisher/OTBI)**.

DAY 2 — Create Supplier + Requisition

 - Quantity: 1
 - Price: 50000

3. Add Supplier:
 - Select JITU_SUPPLIER
4. Click **Add to Cart**
5. Click **Checkout**

Checkout Page:

- Deliver To: Select yourself
- Location: Your office location

Click **Submit**

✓Output:

- Requisition Number generated
- Status = Pending Approval / Approved

DAY 3 — Create Purchase Order (END-TO-END)

Scenario

You created requisition → Now create PO from it

A. Auto Create PO (if enabled)

Path:

Navigator → Procurement → **Purchase Orders**

1. Click **Create Order**
2. Choose:
 - Supplier: JITU_SUPPLIER
3. Add Line:
 - Item: Laptop
 - Qty: 1
 - Price: 50000

Click **Submit**

B. Create PO from Requisition (Best Practice)

- Lines: Auto from requisition

Click **Submit**

C. Verify PO

- Go to:
☞ Procurement → Purchase Orders
- Search:
 - Supplier = JITU_SUPPLIER

☞ Open PO → Check:

- Status: Approved / Open

FINAL RESULT (After Day 3)

You have done:

- ✓ Navigation
- ✓ Setup understanding
- ✓ Supplier created
- ✓ Requisition created
- ✓ Purchase Order created

This means you understand **P2P Cycle (Procure to Pay)**

How to Explain in Interview

"I have hands-on experience in Fusion Procurement where I created suppliers, purchase requisitions, and purchase orders, and understood the end-to-end P2P flow including approvals and document lifecycle."

NEXT STEP (Very Important)

Now you're ready for:

Fusion REST APIs (create PO via API)
OIC Integration (APEX → Fusion)

If you want next:

"Give me Fusion REST API step-by-step (Postman)"
"Give me OIC integration for PO"

I'll move you to **real integration level (MNC ready)**

Fusion REST APIs (create PO via API) ➡ OIC Integration (APEX → Fusion)

Great—now we move from UI to **real integration (the skill that gets you hired)**.
You'll do **(1) Create PO via REST API** and then **(2) APEX → OIC → Fusion end-to-end**.

PART 1 — Create Purchase Order via REST API

Inside Oracle Fusion ERP, POs are created using the **Procurement REST API**.

1. API Details

Endpoint:

POST /fscmRestApi/resources/latest/purchaseOrders

Full URL:

https://<fusion-instance>/fscmRestApi/resources/latest/purchaseOrders

2. Authentication

Use:

- Basic Auth (Username/Password) OR
- OAuth (preferred in real projects)

For practice: use **Basic Auth in Postman**

3. Headers

Content-Type: application/json

4. Sample Payload (WORKING STRUCTURE)

```
{
  "ProcurementBU": "Vision Operations",
  "Supplier": "JITU_SUPPLIER",
  "SupplierSite": "JITU_SUPPLIER_SITE",
  "CurrencyCode": "INR",
  "Lines": [
    {
      "LineType": "Goods",
      "ItemDescription": "Laptop",
      "Quantity": 1,
      "UnitPrice": 50000,
      "DestinationTypeCode": "EXPENSE",
      "DeliverToLocation": "Hyderabad"
    }
  ]
}
```

5. Test in Postman

Steps:

1. Open Postman
2. Method: POST
3. Enter URL
4. Add Auth
5. Paste Payload
6. Click **Send**

6. Response

```
{  
  "OrderNumber": "12345",  
  "Status": "OPEN"  
}
```

Now verify in Fusion UI → Purchase Orders

PART 2 — OIC Integration (REST → Fusion)

Using Oracle Integration Cloud

1. Create Integration

Type:

App Driven Orchestration

2. Define REST Trigger

Request JSON:

```
{  
  "supplier": "string",  
  "item": "string",  
  "amount": "number"  
}
```

3. Flow Design

- Supplier
- Item
- Amount

2. APEX REST Call

DECLARE

l_response CLOB;

BEGIN

```
l_response := apex_web_service.make_rest_request(
  p_url      => 'https://<oic-url>/poIntegration',
  p_http_method => 'POST',
  p_body      => '{
    "supplier": "" || :P1_SUPPLIER || ",
    "item": "" || :P1_ITEM || ",
    "amount": ' || :P1_AMOUNT || '
  }',
  p_username  => 'OIC_USER',
  p_password  => 'OIC_PASSWORD'
);
```

```
DBMS_OUTPUT.PUT_LINE(l_response);
```

END;

3. Final Flow

WHAT YOU JUST BUILT (VERY IMPORTANT)

- ✓ Created PO via REST API
- ✓ Built OIC Integration
- ✓ Connected APEX to Fusion

This is **real enterprise architecture Interview Answer (Golden Line)**

"I implemented end-to-end integration where APEX captures PO data, sends it to OIC via REST, and OIC orchestrates and invokes Fusion Procurement REST APIs to create purchase orders."

NEXT LEVEL (HIGHLY RECOMMENDED)

- "Give me Postman collection + real payloads"
- "Give me error handling + retry logic"
- "Give me 50 interview questions Fusion + OIC"

Focus on **SCM flow**:

- Requisition → Purchase Order → Receipt → Invoice

heart of Fusion SCM (Procure-to-Pay / P2P).

I'll give you a **clean, hands-on flow + where to click + what happens behind the scenes** so you can *practice and explain confidently*.

END-TO-END SCM FLOW (P2P)

Flow:

Requisition → Purchase Order → Receipt → Invoice → Payment

Procure to Pay

Oracle Fusion Applications

- Work area for buyers- In built analytics, Spend Analysis
- Role based dash-boards
- Unified work-flow approval & Document change management
- Consolidated work-list and watch-list
- Visibility of cycle time & popularity of the supplier
- Collaborations with SMEs
- Contract repository- Managing complete lifecycles of the contract
- Single logon for the supplier
- Modeled for shared services environment
- Smart Sourcing: improves visibility, powers negotiations, converts negotiated savings into realized savings

- Smart Receipt: Automatic receipt App Engine
- Automatic receipt assignment: Automatic workflow assignment
- Excel based receipt entry: Excel integration using FDI (Fusion desktop Integrator)
- Invoice Image processing. Image alongside create invoice UI
- Invoice entry modeled on real life invoice, spreadsheet entry
- Payable dashboard, personalized search capability, simultaneous comparison of invoices
- PO and receipt matching in the same window
- Payment work area- Both single payment & batch processing
- Credit memos for refund

1. REQUISITION (Demand Creation)

Purpose:

User requests items/services

Navigation:

Navigator → **Procurement** → **Purchase Requisitions**

Steps:

1. Click **Create Requisition**
2. Add:
 - Item: Laptop
 - Quantity: 1
 - Price: 50,000
3. Add Supplier (optional)
4. Click **Add to Cart** → **Checkout** → **Submit**

✓ Output:

- Requisition Number generated
- Status:
 - Pending Approval / Approved

Concept:

“Internal request — not yet a purchase”

2. PURCHASE ORDER (PO)

Purpose:

Official order sent to supplier

Navigation:

Procurement → **Purchase Orders**

Steps (Best Practice):

1. Go to:
 - ☞ **Process Requisitions**
2. Search your requisition
3. Click **Add to Document Builder**
4. Click **Create PO**

✓ Output:

- PO Number generated
- Status: Open / Approved

Concept:

“Legal document to supplier”

3. RECEIPT (Goods Received)

The screenshot displays the Oracle Fusion Applications interface for Purchase Requisitions. The top navigation bar includes the Oracle logo, Fusion Applications title, and user information (CVRQST01). The main content area is titled "Purchase Requisitions" and features a "Shop" button. Below this, there is a "Search Catalog" section with a search bar. The "Browse Catalog" section lists various categories: Legal (Legal services including patent and visa), Office Supplies (All office supplies needs), Office Technology (Computers, Printers and Accessories), Services (All outside services), Software (Software), Telecommunications (Office phones, mobile phones and accessories), and Travel (All business travel needs including transportation and lodging). The "My Requisitions" section contains a table with columns: Requisition, Description, Creation Date, Approval Amount, and Status. The table lists five requisitions, with the first one (20011220) highlighted. The "Purchasing News" section contains a message about a wireless provider change. The right sidebar includes a "Requisition" section with a "Edit and Submit" button, a "Quick Links" section with links to Requisition Line Entry, Shopping Lists, Smart Forms, and Noncatalog Request, and a "Requisition Preferences" section showing the requester's name (Rhonda Abbott) and location (New York City).

PO	Procurement	Order
Receipt	Inventory	Goods Received
Invoice	Payables	Liability
Payment	Payables	Settlement

INTERVIEW EXPLANATION (VERY IMPORTANT)

“In Fusion SCM, the Procure-to-Pay flow starts with a requisition, which is converted into a purchase order. Once goods are received, a receipt is created, followed by invoice matching in Payables, and finally payment is processed.”

PRACTICE TASK (DO THIS TODAY)

Create complete flow:

1. Requisition
2. PO
3. Receipt
4. Invoice

HOW THIS CONNECTS TO YOUR FUTURE (IMPORTANT)

Once you understand this flow:

You will:

- Call **PO API (Fusion REST)**
- Build **OIC integration**
- Create **APEX automation**

NEXT STEP (I recommend)

Tell me:

“Give me API for complete P2P flow”

“Give me OIC integration for full cycle”

“Give me real-time interview scenarios (SCM)”

I'll take you to **real project level**

Create complete flow: Requisition PO Receipt Invoice

Great—let's execute a **complete Procure-to-Pay (P2P) flow** hands-on in your Oracle Fusion ERP instance. Follow these exact steps once; after that, you'll be able to demo it confidently.

END-TO-END: Requisition → PO → Receipt → Invoice

What you'll achieve

- Create **Requisition**
- Convert to **Purchase Order**
- Perform **Receipt**
- Create & **Match Invoice**

Oracle Procure to Pay Process

STEP 1 — Create Requisition

Navigation

Navigator → **Procurement** → **Purchase Requisitions**

Do this:

1. Click **Create Requisition**
2. Enter:
 - **Description:** Laptop Purchase
 - **Quantity:** 1
 - **Price:** 50000
3. (Optional) Supplier: JITU_SUPPLIER
4. Click **Add to Cart** → **Checkout**

Checkout:

- Deliver To: Yourself
- Location: Your office

Click **Submit**

Result

- Requisition Number generated (note it)
- Status: *Pending Approval / Approved*

STEP 2 — Create Purchase Order (from Requisition)

Navigation

Procurement → **Process Requisitions**

Do this:

1. Search your **Requisition Number**
2. Select it → Click **Add to Document Builder**
3. Click **Create PO**

Verify fields:

- Supplier: auto (or pick JITU_SUPPLIER)
- Lines: auto from requisition
- Amount: 50000

Click **Submit**

✓ Result

- **PO Number** generated (note it)
- Status: *Open / Approved*

STEP 3 — Create Receipt (Goods Received)

Navigation

Navigator → **Inventory** → **Receiving**

Table Diagnostics

Notes

Note to Supplier: | Note to Receiver: |

Do this:

1. Search using **PO Number**
2. Select the PO line
3. Enter:
 - o **Quantity Received: 1**
4. Click **Submit**

✓ **Result**

- Receipt created
- Inventory updated (if item-based)

STEP 4 — Create Invoice (3-Way Match)

Navigation

Navigator → Payables → Invoices

Do this:

1. Click **Create Invoice**
2. Enter:
 - o **Supplier: JITU_SUPPLIER**
 - o **Amount: 50000**
3. Click **Match**

4. Search using **PO Number**
5. Select line → Apply

Click **Validate**

✓ Result

- Invoice created
- Status: *Validated*

FINAL CHECK (Quick Verification)

Step	Where to Check	What to See
Requisition Procurement → Requisitions		Status Approved
PO	Procurement → Purchase Orders	Status Open/Approved
Receipt	Inventory → Receiving	Receipt exists
Invoice	Payables → Invoices	Status Validated

What You Just Learned (Explain Like a Pro)

“First, a requisition is created to request goods. It is then converted into a purchase order for the supplier. Once goods are received, a receipt is recorded. Finally, an invoice is created and matched with the PO and receipt before payment.”

Common Issues (and quick fixes)

- **✗ Requisition not visible in Process Requisitions**
Wait for approval or use *My Requisitions*
- **✗ Supplier not selectable**
Ensure supplier/site is active
- **✗ Cannot match invoice**
Ensure PO + Receipt exist (3-way match)
- **✗ Receipt not found**
Check correct BU / Inventory Org

Next (Now you're ready)

You've done the full business flow. Next, make it **technical**:

Create PO via REST API (Postman → Fusion)

Build OIC flow for P2P

APEX form → OIC → Fusion automation

2. Map EBS → Fusion (VERY IMPORTANT)

EBS	Fusion
PO_HEADERS_ALL	PO_HEADERS_ALL (view-based)
AP_INVOICES_ALL	AP_INVOICES_ALL

EBS

Fusion

Forms

Web UI

Concurrent Programs ESS Jobs

XML Publisher

BI Publisher

You already know logic — just learn **new interface & tools**

core technical layer of Fusion SCM. Below is a **clean, usable P2P API pack** you can run in Postman and later plug into OIC/APEX.

FULL P2P REST APIs (FUSION SCM)

Using Oracle Fusion ERP REST services

P2P FLOW (API LEVEL)

Requisition → Purchase Order → Receipt → Invoice

1. CREATE REQUISITION API

✓ Endpoint

POST /fscmRestApi/resources/latest/purchaseRequisitions

✓ Sample Payload

```

{
  "RequisitioningBusinessUnit": "Vision Operations",
  "Preparer": "JITU USER",
  "Description": "Laptop Request",
  "Lines": [
    {
      "LineType": "Goods",
      "ItemDescription": "Laptop",
      "Quantity": 1,

```

```
"UnitPrice": 50000,  
"DestinationTypeCode": "EXPENSE",  
"DeliverToLocation": "Hyderabad"  
}  
]  
}
```

✓ Response

```
{  
  "RequisitionNumber": "REQ12345",  
  "Status": "INCOMPLETE"  
}
```

2. CREATE PURCHASE ORDER API

✓ Endpoint

POST /fscmRestApi/resources/latest/purchaseOrders

✓ Sample Payload

```
{  
  "ProcurementBU": "Vision Operations",  
  "Supplier": "JITU_SUPPLIER",  
  "SupplierSite": "JITU_SITE",  
  "CurrencyCode": "INR",  
  "Lines": [  
    {  
      "LineType": "Goods",  
      "ItemDescription": "Laptop",  
      "Quantity": 1,  
      "UnitPrice": 50000,  
      "DestinationTypeCode": "EXPENSE",  
      "DeliverToLocation": "Hyderabad"  
    }  
  ]  
}
```

✓ Response

```
{  
  "OrderNumber": "PO12345",  
  "Status": "OPEN"  
}
```

3. CREATE RECEIPT API

Receipt APIs are under Receiving module

✓ Endpoint

POST /fscmRestApi/resources/latest/receivingTransactions

✓ Sample Payload

```
{
  "TransactionType": "RECEIVE",
  "SourceDocumentCode": "PO",
  "DocumentNumber": "PO12345",
  "Lines": [
    {
      "Quantity": 1,
      "UOM": "Each"
    }
  ]
}
```

✓ Response

```
{
  "ReceiptNumber": "RCV12345",
  "Status": "COMPLETED"
}
```

4. CREATE INVOICE API (Payables)

✓ Endpoint

POST /fscmRestApi/resources/latest/invoices

Sample Payload

```
{
  "InvoiceNumber": "INV12345",
  "InvoiceAmount": 50000,
  "Supplier": "JITU_SUPPLIER",
  "BusinessUnit": "Vision Operations",
  "InvoiceLines": [
    {
      "LineNumber": 1,
      "Amount": 50000,

```

```
"Description": "Laptop Invoice"
}
]
}
```

✓ Response

```
{
  "InvoiceId": "10001",
  "Status": "VALIDATED"
}
```

AUTHENTICATION (IMPORTANT)

Option 1: Basic Auth

- Username
- Password

Option 2: OAuth (Recommended for MNC)

POSTMAN SETUP

1. Method: POST
2. URL:

https://<fusion-url>/fscmRestApi/resources/latest/<resource>

3. Headers:

Content-Type: application/json

4. Authorization:

- Basic Auth

COMPLETE FLOW TEST (DO THIS)

Run in sequence:

1. Create Requisition → get REQ
2. Create PO → get PO
3. Create Receipt → use PO
4. Create Invoice

REAL-TIME NOTES

- ✓ Values must match setup (BU, Supplier, Location)
- ✓ Supplier must exist

- ✓ Use correct case-sensitive values
- ✓ Sometimes approvals required

INTERVIEW EXPLANATION

"In Fusion SCM, we use REST APIs such as purchaseRequisitions, purchaseOrders, receivingTransactions, and invoices to automate the Procure-to-Pay cycle. These APIs are orchestrated via OIC for real-time integration."

NEXT LEVEL (HIGHLY RECOMMENDED)

- "Give me OIC full P2P integration flow"
- "Give me Postman collection file"
- "Give me error handling + retry logic"
- "Mock interview (Fusion + OIC + APIs)"

3. Learn Fusion Data Access (5–7 days)

You **cannot query DB directly** like EBS.

Instead use:

1. OTBI (Reports)

- Real-time reporting
- Drag & drop

2. BI Publisher

- Data Model + Report
- SQL allowed via subject areas

must-have skill in Fusion. I'll show you **exact steps (hands-on)** to create both:

- **OTBI (Real-time reports)**
- **BI Publisher (Formatted reports / XML reports)**

You can practice directly in your Oracle Fusion ERP instance.

1. OTBI REPORT (Step-by-Step)

What is OTBI?

- Real-time reporting (no data model needed)
- Drag & drop
- Based on subject areas

Navigation

Navigator → **Tools** → **Reports and Analytics**

Click **Browse Catalog**

Create OTBI Report

Steps:

1. Go to:
 - **New → Analysis**
2. Select Subject Area:
 - Example:
☞ *Procurement – Purchasing Real Time*
3. Click **Continue**

Build Report (Drag & Drop)

Add Columns:

- Purchase Order Number
- Supplier Name
- Amount
- Status

Drag from left → Columns

Add Filters

Click **Filters** → **Add Filter**

Example:

- Status = Open

Add Sorting (Optional)

- Sort by PO Number DESC

Save Report

Save As:

- Folder: Custom
- Name: PO_REPORT_OTBI

Run Report

Click **Results**

Output:

Real-time PO report

2. BI PUBLISHER REPORT (Step-by-Step)

What is BI Publisher?

- Advanced reporting
- Pixel-perfect (PDF, Excel)
- Supports:
 - SQL
 - XML
 - Templates

Navigation

Navigator → Tools → **Reports and Analytics**

Step 1: Create Data Model

Steps:

1. Click:
New → Data Model
2. Select:
SQL Query

Sample SQL

```
SELECT
    pha.segment1 PO_NUMBER,
    pha.type_lookup_code PO_TYPE,
    sup.vendor_name SUPPLIER,
    pha.creation_date
FROM po_headers_all pha,
     po_vendors sup
WHERE pha.vendor_id = sup.vendor_id;
```

Click **Save**

Name: PO_DM

Step 2: Create Report

Steps:

1. Click:
New → Report
2. Choose:
Use Existing Data Model
3. Select:
PO_DM
4. **Step 3: Create Template**

Options:

- Layout Editor (Online)
- Upload Word Template

Simple Layout:

- Drag fields:
 - PO Number
 - Supplier
 - Date

Click **Save**

Step 4: Run Report

Click **View Report**

Output:

- PDF / Excel formatted report

OTBI vs BI Publisher (Important)

Feature	OTBI	BI Publisher
Real-time	✓ Yes	✗ No
SQL required	✗ No	✓ Yes
Formatting	Basic	Advanced
Use case	Analysis	Reporting

When to Use What?

- ✓ OTBI → Dashboards, quick reports
- ✓ BI Publisher → Invoices, PO print, payslips

Interview Answer (Perfect)

“OTBI is used for real-time reporting using subject areas without SQL, whereas BI Publisher is used for formatted reports with data models and templates.”

Practice Task (Do This Today)

Task 1:

Create OTBI report for:
Purchase Orders

Task 2:

Create BI report using:
PO Data Model

PART 1 — BI PUBLISHER XML TEMPLATE (WORD)

Using Oracle Fusion ERP BI Publisher

1. Sample XML Data (for testing)

Save this as po_sample.xml

```
<DATA>
<PO>
  <PO_NUMBER>PO12345</PO_NUMBER>
  <SUPPLIER>JITU_SUPPLIER</SUPPLIER>
  <DATE>2026-04-24</DATE>
  <AMOUNT>50000</AMOUNT>
</PO>
</DATA>
```

2. Create Word Template (RTF)

Open **MS Word**

Insert Fields (use BI Publisher syntax)

Purchase Order Report

PO Number: <?PO_NUMBER?>

Supplier: <?SUPPLIER?>

Date: <?DATE?>

Amount: <?AMOUNT?>

3. Table Format (Recommended)

PO Number	Supplier	Date	Amount
<?PO_NUMBER?>	<?SUPPLIER?>	<?DATE?>	<?AMOUNT?>

4. Save File

Save as:

PO_TEMPLATE.rtf

5. Upload in BI Publisher

- Go to:
🔗 Reports and Analytics → Browse Catalog
- Open your report
- Upload Template
- Select:
 - Type: RTF
- Save

6. Output

Run → PDF / Excel report generated

PART 2 — OTBI ADVANCED FILTERS + DASHBOARD

1. Create OTBI Analysis

Path:

New → Analysis

Subject Area: Procurement

2. Add Columns

- PO Number
- Supplier Name
- Amount
- Status

3. Advanced Filters

Example 1: Amount Filter

Amount > 10000

Example 2: Status Filter

Status = 'OPEN'

Example 3: Date Filter

Creation Date = Last 30 Days

4. Add Prompt (Dynamic Filter)

1. Click:
Prompts → New Prompt
2. Add:
 - Supplier Name

User selects supplier dynamically

5. Create Dashboard

Retail Sales Report

G

YEAR Sales

G

MONTH Sales

Category	Sales (in thousand USD)
F INDUSTRY	\$999 E

E
E

Steps:

1. New → Dashboard
2. Add:
 - Your Analysis
 - Prompt
3. Save:
PO_DASHBOARD

6. Add Visualization (Optional)

- Bar Chart → Amount by Supplier
- Pie Chart → Status

PART 3 — REAL INTERVIEW QUESTIONS (OTBI + BI)

BASIC

Q1: What is OTBI?

Real-time reporting tool using subject areas

Q2: What is BI Publisher?

Reporting tool for formatted outputs using data model + templates

Q3: Difference between OTBI & BI?

OTBI = Real-time, no SQL

BI = SQL + formatted reports

INTERMEDIATE**Q4: What is Subject Area?**

Logical data model used in OTBI

Q5: What is Data Model in BI?

SQL/XML source of data

Q6: What is Template?

Layout (RTF/XSL) for report output

ADVANCED**Q7: Can OTBI use SQL?**

✗ No (uses subject area)

Q8: Can BI Publisher use SQL?

✓ Yes

Q9: What is bursting?

Sending reports to multiple users automatically

Q10: How to improve performance?

- Use filters
- Limit columns
- Avoid heavy joins

REAL-TIME SCENARIO

Q: Client wants:

- Dashboard → OTBI
- Invoice PDF → BI Publisher

Explain both usage clearly

WHAT YOU SHOULD DO NOW

✔ Task 1:

Create OTBI dashboard with:

- Filter
- Prompt
- Chart

✔ Task 2:

Create BI report with:

- SQL
- RTF Template

NEXT LEVEL (I RECOMMEND)

Tell me:

“Give me bursting configuration step-by-step”

“Give me advanced BI Publisher SQL queries”

“Give me real project (APEX + BI + OIC)”

advanced layer that turns you into a strong Fusion consultant. I'll give you:

1. **BI Publisher Bursting (step-by-step)**
2. **Advanced BI Publisher SQL (real-use queries)**
3. **End-to-end Project (APEX + OIC + Fusion + BI)**

PART 1 — BI PUBLISHER BURSTING (STEP-BY-STEP)

In Oracle Fusion ERP, bursting = **auto-send reports (email/FTP) per user/data**

1. What is Bursting?

Example:

- 100 suppliers
- Each supplier gets **their own PO report via email automatically**

2. Create Bursting Query

Add this in **Data Model → Bursting**

```
SELECT
'KEY1'      AS "KEY",
'EMAIL'     AS "DEL_CHANNEL",
'test@gmail.com' AS "PARAMETER1",
'PO_REPORT' AS "TEMPLATE",
'en-US'     AS "LOCALE",
'PDF'       AS "OUTPUT_FORMAT"
FROM DUAL
```

3. Important Columns

Column	Meaning
KEY	Match with data
DEL_CHANNEL	EMAIL / FTP
PARAMETER1	Email ID
TEMPLATE	Template name
OUTPUT_FORMAT	PDF / Excel

4. Enable Bursting

1. Open Report
2. Go to **Properties**
3. Enable:
 - ✓ Enable Bursting

5. Schedule Job

1. Click **Schedule**
2. Choose:
 - Output: PDF
 - Delivery: Email

Result

Report auto-sent to users

PART 2 — ADVANCED BI PUBLISHER SQL QUERIES

1. Purchase Order Report

```
SELECT
    pha.segment1      PO_NUMBER,
    sup.vendor_name    SUPPLIER_NAME,
    pha.creation_date,
    pha.authorization_status,
    SUM(pla.unit_price * pla.quantity) TOTAL_AMOUNT
FROM
    po_headers_all pha,
    po_lines_all pla,
    po_vendors sup
WHERE
    pha.po_header_id = pla.po_header_id
AND pha.vendor_id = sup.vendor_id
GROUP BY
    pha.segment1, sup.vendor_name, pha.creation_date, pha.authorization_status;
```

2. Invoice Report (AP Module)

```
SELECT
    aia.invoice_num,
    aia.invoice_date,
    sup.vendor_name,
    aia.invoice_amount,
    aia.payment_status_flag
FROM
    ap_invoices_all aia,
    ap_suppliers sup
WHERE
    aia.vendor_id = sup.vendor_id;
```

3. Inventory Report

```
SELECT
    msi.segment1 ITEM_CODE,
    msi.description,
    mtl.quantity_on_hand
FROM
    mtl_system_items_b msi,
    mtl_onhand_quantities mtl
WHERE
    msi.inventory_item_id = mtl.inventory_item_id;
```

4. Parameterized Query (IMPORTANT)

```
SELECT
    pha.segment1 PO_NUMBER,
```

```

sup.vendor_name
FROM
  po_headers_all pha,
  po_vendors sup
WHERE
  pha.vendor_id = sup.vendor_id
AND sup.vendor_name = :P_SUPPLIER;

```

Add parameter:

- Name: P_SUPPLIER
- Type: String

5.Performance Tips

- ✓ Use joins properly
- ✓ Avoid unnecessary columns
- ✓ Use filters
- ✓ Use indexes

PART 3 — REAL PROJECT (APEX + OIC + BI + FUSION)

Project Name:

PO Automation & Reporting System

Architecture

Oracle BI Publisher Enterprise

PAAS/ On Premise

Flow

1. User enters PO in **Oracle APEX**
2. APEX → REST call → **Oracle Integration Cloud**
3. OIC → Fusion API → Create PO
4. BI Publisher → Generate PO Report
5. Email sent to supplier

APEX Table

```
CREATE TABLE GC_PO_DATA (  
  PO_ID NUMBER,  
  SUPPLIER VARCHAR2(100),  
  ITEM VARCHAR2(100),  
  AMOUNT NUMBER,  
  STATUS VARCHAR2(20),  
  CREATED_DATE DATE DEFAULT SYSDATE  
);
```

APEX Form

Fields:

- Supplier
- Item
- Amount

OIC Flow

- REST Trigger
- Mapping
- Call Fusion PO API
- Return PO Number

BI Publisher

- Data Model → PO Query
- Template → PDF
- Bursting → Email

Final Output

- ✓ PO created in Fusion
- ✓ Report generated
- ✓ Email sent

INTERVIEW GOLD LINE

"I implemented an end-to-end solution where APEX captures PO data, OIC integrates with Fusion APIs to create transactions, and BI Publisher generates and distributes reports using bursting."

Great—this is the **execution layer**. I'll walk you through:

1. **OIC screen-by-screen setup (PO integration)**
2. **Postman collection + ready payloads**
3. **Mock interview (Fusion + OIC + BI)**

Follow along in your Oracle Integration Cloud and Oracle Fusion ERP.

PART 1 — OIC (SCREEN-BY-SCREEN SETUP)

1. Create Connection (Fusion)

Screen:

OIC → **Integrations** → **Connections** → **Create**

Steps:

1. Choose:
 - **Fusion ERP Adapter**
2. Name:
 - FUSION_PO_CONN
3. Configure:
 - URL: https://<fusion-url>
 - Username / Password
4. Click **Test** → **Save**

2. Create Integration

Screen:

Integrations → **Create**

Select:

App Driven Orchestration

Name:

PO_INTEGRATION_FLOW

3. Add REST Trigger

Screen:

Click + → **REST**

Define Request:

```
{  
  "supplier": "string",  
  "item": "string",  
  "amount": "number"  
}
```

Click **Next** → **Done**

4. Add Assign Activity

Click + → **Assign**

Create variables:

- v_supplier
- v_item
- v_amount

Map from request → variables

5. Add Fusion Adapter (Invoke)

Screen:

Click + → Invoke → Fusion Connection

Choose:

purchaseOrders REST

6. Mapping (MOST IMPORTANT)

The screenshot shows the Oracle Integration Cloud interface for a process named 'process to createAccount' (MyIntegration (1.0)). The 'Map' screen is active, displaying a mapping between source and target attributes.

Source Attributes:

- NamedIDHierarchy extends Industry
- NamedReadOnlyID extends Industry
- Login
- Name
- NameFurigana
- NewPassword
- Notes
- NumberOfEmployees
- OrganizationHierarchy
- Parent
- NamedIDHierarchy extends Parent
- NamedReadOnlyID extends Parent
- SalesSettings
 - AcquiredDate
- SalesAccount
- NamedIDHierarchy extends SalesAccount
- NamedReadOnlyID extends SalesAccount
- TotalRevenue
- Currency
 - ID
- Name

Target Attributes:

- CurrencyCode
- CurrencyConvRateType
- CorpCurrencyCode
- DataCloudStatus
- LastEnrichmentDate
- PartyStatus
- CreatedByModule
- CreatedBy
- CreationDate
- LastUpdateDate
- LastUpdateLogin
- LastUpdatedBy
- PreferredContactMethod
- PhoneCountryCode
- PhoneAreaCode
- PhoneNumber
- PhoneExtension
- FormattedPhoneNumber
- FaxCountryCode
- FaxAreaCode

A green line indicates a mapping from the 'Name' attribute in the Source to the 'Name' attribute in the Target.

Map:

OIC Field Fusion Field

v_supplier Supplier

v_item ItemDescription

v_amount UnitPrice

7. Add Response

Return:

```
{  
  "status": "SUCCESS",  
  "poNumber": "12345"  
}
```

8. Activate

Click **Validate** → **Activate**

PART 2 — POSTMAN COLLECTION (READY)

1. Create Collection

Name:

Fusion_P2P_APIS

2. Base URL

https://<fusion-url>/fscmRestApi/resources/latest

3. APIs

1. Create PO

POST

/purchaseOrders

Payload:

```
{  
  "ProcurementBU": "Vision Operations",  
  "Supplier": "JITU_SUPPLIER",  
  "SupplierSite": "JITU_SITE",  
  "CurrencyCode": "INR",  
  "Lines": [  
    {  
      "LineType": "Goods",  
      "ItemDescription": "Laptop",  
      "Quantity": 1,  
      "UnitPrice": 50000,  
      "DestinationTypeCode": "EXPENSE",  
      "DeliverToLocation": "Hyderabad"  
    }  
  ]  
}
```

```
]
}
```

2. Get PO

GET

/purchaseOrders

3. Create Requisition

/purchaseRequisitions

4. Create Invoice

/invoices

4. Auth

Authorization:

- Basic Auth

5. Test Flow

- ✓ Create PO
- ✓ Verify in Fusion UI

PART 3 — MOCK INTERVIEW (REAL QUESTIONS)

BASIC

Q1: What is OIC?

Middleware for integration between systems

Q2: What is Fusion REST API?

API to interact with Fusion data

INTERMEDIATE

Q3: How APEX integrates with Fusion?

APEX → REST → OIC → Fusion API

Q4: What is App Driven Orchestration?

Integration triggered via REST/API

Q5: What is mapping?

Transforming data from source to target

ADVANCED

Q6: How do you handle errors in OIC?

- Scope
- Fault Handler
- Return error response

Q7: What is tracking?

Business identifier for monitoring

Q8: Difference OTBI vs BI?

OTBI → Real-time

BI → Formatted reports

REAL SCENARIO

Q:

Client wants:

- UI → APEX
- Integration → OIC
- ERP → Fusion
- Reports → BI

Explain flow

PERFECT ANSWER

“User enters data in APEX, which calls OIC REST API. OIC orchestrates and transforms data before invoking Fusion REST APIs. BI Publisher is used to generate reports, and OTBI is used for real-time analytics.”

WHAT YOU SHOULD DO NOW

✓ Practice:

1. Create OIC Integration
2. Test via Postman
3. Connect APEX

4. Learn Fusion APIs (CORE SKILL)

This is where you become valuable.

REST APIs (Most Important)

Example:

GET /fscmRestApi/resources/latest/purchaseOrders

POST /hcmRestApi/resources/latest/workers

Tools:

- Postman
- cURL
- APEX REST call

Practice Task:

Create PO via API

5. Learn FBDI (Bulk Upload)

FBDI = Excel-based data load

Steps:

1. Download template
2. Fill data
3. Upload via UCM
4. Run ESS Job

6. Learn OIC (ANDATORY)

Use Oracle Integration Cloud

You already started — now master:

- REST Trigger
- Fusion Adapter
- Mapping
- Fault Handling

7. Learn APEX + Fusion Integration (Your Strength 🧡)

Practice:

- APEX form → call Fusion REST API
- Store response

8. HANDS-ON ROADMAP (Follow Exactly)

Week 1

✓ Explore Fusion UI

✓ Create:

- Supplier
- Item
- Purchase Order

Week 2

✓ Learn REST APIs

✓ Use Postman:

- GET PO
- CREATE PO

Week 3

✓ Build OIC Integration

✓ REST → Fusion

Week 4

✓ Build APEX Project

APEX → OIC → Fusion

9. MINI PROJECTS (DO THESE)

Project 1:

Supplier Creation (APEX → Fusion)

Project 2:

Purchase Order Integration

Project 3:

Inventory Item Sync

10. KEY SKILLS TO LEARN

✓ Fusion Navigation

✓ REST APIs

✓ BI Reports

- ✓ OIC Integration
- ✓ APEX Integration
- ✓ FBDI

11. Interview Strategy

"I have strong EBS background and transitioned to Fusion by working on REST-based integrations, OIC orchestration, and APEX extensions."

12. Resume Upgrade

Add:

- Fusion REST API integration
- OIC orchestration
- APEX-Fusion integration

13. Daily Practice Plan (2–3 hrs/day)

Day	Task
Day 1	Navigation
Day 2	Create PO
Day 3	REST API
Day 4	Postman
Day 5	OIC
Day 6	APEX Integration
Day 7	Mini Project

14. Biggest Mistakes to Avoid

- ✗ Trying to learn everything at once
- ✗ Ignoring REST APIs
- ✗ Skipping OIC
- ✗ Not doing hands-on

15. Your Fast Track Plan (Based on YOU)

Since you:

- Know SQL/PLSQL ✓
- Know APEX ✓
- Know EBS ✓

You can switch in **30–45 days**

complete Basic → Advanced notes for Create Fusion Integration (Oracle Integration Cloud - OIC) based on your screenshot

1. What is “Create Fusion Integration” in OIC?

Create Fusion Integration is a **prebuilt template-based integration** feature in Oracle Integration Cloud that helps you quickly connect with:

- Oracle Fusion ERP
- Oracle Fusion HCM
- Oracle Fusion SCM

It provides **ready-made connections, adapters, and flows** so you don’t start from scratch.

2. Why Use It?

Instead of building integration manually:

Without Fusion Integration	With Fusion Integration
Create connections manually	Pre-configured connections
Define APIs from scratch	Prebuilt templates
More development time	Faster implementation
Error-prone	Standardized & optimized

3. Architecture Overview

Flow:

1. Source System (External / REST / File / DB)
2. OIC Integration Layer
3. Fusion Application (ERP/HCM/SCM)
4. Response back to source

4. Key Components

✓ 1. Adapters

- Fusion Adapter
- REST Adapter
- SOAP Adapter
- FTP Adapter

✓ 2. Connections

- Pre-configured for Fusion
- Uses credentials (OAuth / Basic Auth)

✓ 3. Integrations

- App-driven (REST trigger)
- Scheduled (Batch jobs)
- Basic routing

5. Step-by-Step: Create Fusion Integration

Step 1: Login to OIC

- Go to OIC Console
- Navigate → **Integrations**

Step 2: Click “Create”

- Select: **Create Fusion Integration**

Step 3: Select Use Case

Examples:

- Employee Data Sync (HCM)
- Invoice Integration (ERP)
- Supplier Sync

Step 4: Configure Connection

- Enter:
 - Fusion URL
 - Username/Password
 - Security policy

Step 5: Define Trigger

- REST / SOAP / Schedule

Step 6: Mapping

- Drag & Drop mapper
- Map:
 - Source → Fusion fields

Step 7: Activate

- Validate → Activate → Test

6. Types of Fusion Integrations

Type	Description
App Driven	Triggered via API
Scheduled	Runs on interval
Basic Routing	Simple flow
Orchestration	Complex multi-step

7. Real-Time Example (Important for Interview)

Use Case: Employee Creation in Fusion HCM

Flow:

1. REST API receives employee data
2. OIC processes data
3. Calls Fusion HCM API
4. Creates employee record

8. Advanced Concepts

1. Error Handling

- Fault handlers
- Scope-based exception handling

2. Lookup Tables

- Used for value mapping
- Example: Dept Code → Dept Name

3. Tracking

- Business identifiers
- Helps in monitoring

4. Integration Patterns

- Request-Response
- Fire & Forget
- Batch Processing

5. Security

- OAuth 2.0

- Basic Auth
- Certificates

9. Best Practices

- ✓ Use **prebuilt adapters**
- ✓ Always enable **tracking fields**
- ✓ Use **lookup instead of hardcoding**
- ✓ Handle errors properly
- ✓ Use **naming conventions**

10. Common Interview Questions

Q1: What is Fusion Integration in OIC?

Prebuilt integration template for Oracle Fusion Apps.

Q2: Difference between normal integration and fusion integration?

Fusion integration uses preconfigured adapters and reduces development time.

Q3: What adapter is used?

Fusion Adapter

Q4: How do you secure integration?

OAuth / Basic Auth

Q5: What is orchestration?

Multi-step integration flow with logic

11. Pro-Level (Advanced)

- Use **REST APIs of Fusion (FBDI / SOAP / REST)**
- Integrate with **APEX + OIC + Fusion**
- Build **end-to-end integration project**
- Monitor via:
 - Integration Insight
 - Tracking dashboard

12. Sample Project Idea (Very Important)

Project: Employee Data Integration System

Tables:

GC_EDIS_EMPLOYEE
GC_EDIS_LOG

Flow:

1. APEX form → Insert data
2. Call OIC REST API
3. OIC → Fusion HCM
4. Store response

If you want, I can provide:

Full hands-on project (APEX + OIC + Fusion)

Real API payloads & mappings

Interview Q&A (50+ questions)

End-to-end architecture + code

APEX + OIC + Fusion

Great — this is exactly the **most valuable real-time architecture** for your profile.

I'll give you a **complete APEX + OIC + Fusion integration guide (Basic → Advanced + Project + Code Flow)** so you can use it in **interviews + real project**.

1. Overall Architecture (APEX + OIC + Fusion)

Flow:

1. User enters data in **Oracle APEX**
2. APEX calls REST API (OIC endpoint)
3. **Oracle Integration Cloud** processes data
4. OIC calls Fusion API
5. Data inserted into **Oracle Fusion HCM / ERP**
6. Response returns to APEX

2. Real-Time Project (Interview Ready)

Project Name:

Employee Data Integration System (GC_EDIS)

Database Tables (APEX / DB)

```
CREATE TABLE GC_EDIS_EMPLOYEE (  
  EMP_ID    NUMBER,  
  EMP_NAME  VARCHAR2(100),  
  EMAIL     VARCHAR2(100),  
  DEPARTMENT VARCHAR2(50),  
  STATUS    VARCHAR2(20),  
  RESPONSE_MSG VARCHAR2(500),  
  CREATED_DATE DATE DEFAULT SYSDATE  
);
```

3. Step 1: Build APEX Application

Create Form:

- Page: Employee Entry Form
- Fields:
 - Name
 - Email
 - Department

Add Button:

- **Submit & Send to Fusion**

4. Step 2: Call OIC REST API from APEX

Create Web Service (APEX)

Go to:

Shared Components → Web Source Modules

API Details:

- Method: POST
- URL:

https://<oic-instance>/ic/api/integration/v1/flows/rest/EMPLOYEE_SYNC/1.0/

APEX PL/SQL Code

```
DECLARE  
  l_response CLOB;  
BEGIN  
  l_response := apex_web_service.make_rest_request(  
    p_url      => 'https://<oic-url>/employee',  
    p_http_method => 'POST',  
    p_body      => '{  
      "name": "" || :P1_NAME || "",  
      "email": "" || :P1_EMAIL || "",  
    }'  
  );
```

```

    "department": "" || :P1_DEPT || ""
  }
);

```

```

INSERT INTO GC_EDIS_EMPLOYEE
(EMP_NAME, EMAIL, DEPARTMENT, RESPONSE_MSG)
VALUES
(:P1_NAME, :P1_EMAIL, :P1_DEPT, l_response);

```

END;

5. Step 3: Create Integration in OIC

Type:

- App Driven Orchestration (REST Trigger)

Flow Design

ORACLE[®] Integration Cloud

process to createAccount MyIntegration (1.0) Close Validate

Map

Steps:

1. REST Trigger
2. Assign Activity
3. Mapper
4. Fusion Adapter Call
5. Response

6. Step 4: Call Fusion API

Use:

- Oracle Fusion ERP / HCM Adapter

Example API (HCM Worker)

POST /hcmRestApi/resources/latest/workers

Payload:

```
{
  "FirstName": "John",
  "LastName": "Doe",
  "WorkEmail": "john.doe@test.com",
  "DepartmentName": "IT"
}
```

7. Step 5: Mapping (Important)

APEX Field	OIC	Fusion
NAME	name	FirstName
EMAIL	email	WorkEmail
DEPT	department	DepartmentName

8. Step 6: Response Handling

Return from OIC:

```
{
  "status": "SUCCESS",
  "employeeId": "12345"
}
```

Store in APEX table.

9. Error Handling (Advanced)

In OIC:

- Add **Scope**
- Add **Fault Handler**

In APEX:

EXCEPTION

WHEN OTHERS THEN

DBMS_OUTPUT.PUT_LINE(SQLERRM);

10. Security (Very Important)

Layer	Security
-------	----------

APEX → OIC	Basic Auth / OAuth
------------	--------------------

OIC → Fusion	OAuth / Token
--------------	---------------

11. Monitoring

In OIC:

- Tracking ID
- Integration Insight

In APEX:

- Log table (GC_EDIS_EMPLOYEE)

12. Advanced Enhancements

- ✓ Add **Lookup Mapping**
- ✓ Add **Retry Mechanism**
- ✓ Add **Bulk Upload (Excel → APEX → OIC)**
- ✓ Add **Scheduler Job**
- ✓ Add **Dashboard (APEX Reports)**

13. Interview Explanation (Perfect Answer)

“We built an end-to-end integration where APEX captures employee data, sends it via REST API to OIC, and OIC processes and pushes it into Oracle Fusion using prebuilt adapters. The integration includes mapping, error handling, and response tracking.”

14. Resume Line (Use This)

“Developed end-to-end integration between Oracle APEX, Oracle Integration Cloud, and Oracle Fusion HCM using REST APIs and prebuilt adapters with real-time data synchronization.”

15. If You Want Next Level

I can give you:

- ✓ Full **working project ZIP structure**
- ✓ **OIC integration export file**
- ✓ **Fusion API list (ERP + HCM)**
- ✓ **50+ interview Q&A (scenario-based)**
- ✓ **GitHub + Deployment guide**

“Build full project step-by-step”

I’ll take you to **expert level**

Perfect. Let’s build this like a **real project you can demo in interviews** — step by step, with clear deliverables and code.

END-TO-END PROJECT

APEX + OIC + Fusion (Employee Integration System – GC_EDIS)

1. Final Architecture (what you’ll explain in interviews)

Flow (keep this line ready):

APEX UI → REST call → OIC orchestration → Fusion HCM API → Response → APEX log

2. Project Deliverables

You will create:

1. APEX App (UI + API call)
2. OIC Integration (REST → Fusion)
3. Fusion API Connection
4. DB Logging Table
5. Dashboard (Report)

3. STEP 1 – Database Setup (APEX Schema)

```
CREATE TABLE GC_EDIS_EMPLOYEE (  
  EMP_ID      NUMBER GENERATED BY DEFAULT AS IDENTITY,  
  EMP_NAME    VARCHAR2(100),  
  EMAIL       VARCHAR2(100),  
  DEPARTMENT  VARCHAR2(50),  
  STATUS      VARCHAR2(20),  
  RESPONSE_MSG CLOB,  
  CREATED_DATE DATE DEFAULT SYSDATE  
);
```

4. STEP 2 – Build APEX App

Using Oracle APEX

Create Page: Employee Form

Fields:

- P1_NAME
- P1_EMAIL
- P1_DEPT

Button:

Submit to Fusion

5. STEP 3 – APEX → OIC REST Call

Create Process (After Submit)

```
DECLARE  
  l_response CLOB;  
BEGIN  
  l_response := apex_web_service.make_rest_request(  
    p_url      => 'https://<OIC-URL>/employeeSync',  
    p_http_method => 'POST',  
    p_body     => '{  
      "name": "" || :P1_NAME || "",  
      "email": "" || :P1_EMAIL || "",  
      "department": "" || :P1_DEPT || ""  
    }',  
  );
```

```

p_username => 'OIC_USER',
p_password => 'OIC_PASSWORD'
);

```

```

INSERT INTO GC_EDIS_EMPLOYEE
(EMP_NAME, EMAIL, DEPARTMENT, STATUS, RESPONSE_MSG)
VALUES
(:P1_NAME, :P1_EMAIL, :P1_DEPT, 'SENT', l_response);

```

END;

6. STEP 4 – Create Integration in Oracle Integration Cloud

Type:

App Driven Orchestration

Define REST Trigger

Request JSON:

```

{
  "name": "string",
  "email": "string",
  "department": "string"
}

```

7. STEP 5 – OIC Flow Design

Flow:

1. REST Trigger
2. Assign (prepare payload)
3. Mapper
4. Fusion Adapter Call

5. Response

8. STEP 6 – Fusion Connection

Connect to:

Oracle Fusion HCM

Required:

- URL
- Username/Password
- Security Policy

9. STEP 7 – Call Fusion API

Endpoint:

/hcmRestApi/resources/latest/workers

Payload Mapping

```
{
  "FirstName": "input.name",
  "LastName": "Auto",
  "WorkEmail": "input.email",
  "DepartmentName": "input.department"
}
```

10. STEP 8 – Response Handling (OIC)

Return this:

```
{
  "status": "SUCCESS",
  "message": "Employee Created"
}
```

11. STEP 9 – Error Handling (IMPORTANT)

In OIC:

- Add **Scope**
- Add **Fault Handler**
- Return:

```
{
  "status": "ERROR",
```

```
"message": "Error details"
}
```

12. STEP 10 – APEX Report Dashboard

Create Report Page:

```
SELECT EMP_NAME, EMAIL, DEPARTMENT, STATUS, CREATED_DATE
FROM GC_EDIS_EMPLOYEE
ORDER BY CREATED_DATE DESC;
```

13. ADVANCED FEATURES (Make your profile strong)

✓ Add Lookup Table

- Dept mapping (IT → 101)

✓ Add Retry Logic

- If failed → resend

✓ Add Scheduler

- Bulk employee upload

Add File Upload (Excel → APEX → OIC)

14. GitHub Structure (Important for you)

GC_EDIS_PROJECT/

```
|
├── APEX_APP.sql
├── DB_SCRIPT.sql
├── OIC_FLOW_DETAILS.docx
├── API_PAYLOADS.json
└── README.md
```

15. Interview Explanation (Use This)

"I developed an end-to-end integration using Oracle APEX, OIC, and Fusion HCM where user data is captured in APEX, sent via REST API to OIC, and then processed and inserted into Fusion using REST services. The solution includes error handling, logging, and monitoring."

16. Real Interview Questions (You'll be asked)

Q1: How does APEX call OIC?

Using REST API (apex_web_service)

Q2: Why OIC?

Middleware for transformation, routing, security

Q3: How do you handle errors?

Fault handler in OIC + logging in DB

Q4: How do you secure APIs?

OAuth / Basic Auth
