SCAN TO FOLLOW FOR ORACLE FUSION, ACCOUNTING & AUTOMATION INSIGHTS

Preface:

Ensuring the accuracy of account combinations is critical to maintaining reliable financial data in Oracle Fusion General Ledger. Related Value Sets provide a structured way to define dependencies between chart of accounts segments, allowing the system to automatically restrict selections to valid combinations during data entry.

By applying validation directly at the segment level, related value sets not only reduce the risk of incorrect entries but also improve performance compared to traditional cross-validation rules.

This guide outlines the purpose, configuration, and best practices for implementing related value sets to support efficient, controlled, and high-performing chart-of-accounts structures.

A) Scenario:

For Company Code 101, the valid Line of Business Values are only '00' and '10'. Currently, all values are visible, allowing users to select any and proceed with transaction creation. To prevent invalid combinations, we could create a CVR rule, but for now, let's explore how to manage this using the 'Related Value Set' functionality.

Account Selection Dialog:

- Company: 101
- Line of Business: 10
- Account: 10 LoB 1 US1
- Cost Center: 20
- Product: 10
- Intercompany: 20

Journal Lines Table:

Line	Account	Entered (USD) Debit	Entered (USD) Credit	Reconciliation Reference	Description
1	101.20.11101.000.000.000				
2	101.20.41120.000.000.000				

Journal Lines Table:

Line	Account	Entered (USD) Debit	Entered (USD) Credit	Reconciliation Reference	Description
1	101.20.11101.000.000.000	1,000.00			
2	101.20.41120.000.000.000		1,000.00		
Total		1,000.00	1,000.00		

B) Configuration:

The relationship between the Company & LoB Segments needs to be defined.

(N) Setup and Maintenance > Financial Reporting Structures > Task: Manage Chart of Account Value Sets.

Note: If you already know the Value Sets Name, you may skip the setup below and proceed to the next step.

To find the Value Sets Names for the relevant segments, go to the ‘Specify Ledger Options’ task with the appropriate scope.

vision
Specify Ledger Options: US Primary Ledger

General Information

Name: US Primary Ledger
Description: Vision US Primary Ledger (USD)
Currency: USD
Chart of Accounts: US Chart of Accounts

Accounting Calendar

Intercompany	Corporate Company	☒	☒	Optional

(N) Setup and Maintenance > Financial Reporting Structures > Task: Manage Chart of Account Value Sets

Select the Company Value Set Code and then navigate to the 'Related Value Sets' section at the bottom of the page.

Click on the '+' Symbol to create the relationship

The screenshot shows the 'Manage Chart of Accounts Value Sets' page. The 'Value Set Code' is set to 'Corporate%'. The 'Related Value Sets' section is highlighted at the bottom. The table below shows the search results for 'Corporate Company'.

Value Set Code	Protected	Description	Module	Validation Type	Value Data Type
Corporate Account	---	Corporate Account	General Ledger	Independent	Character
Corporate Company	---	Corporate Company	General Ledger	Independent	Character
Corporate Cost Center	---	Corporate Cost Center	General Ledger	Independent	Character
Corporate LoB	---	Corporate Line of Business	General Ledger	Independent	Character
Corporate Product	---	Corporate Product	General Ledger	Independent	Character

Select the Value for 'Related Value Set Code', in our case, it's 'Corporate LoB'.

The screenshot shows the 'Create Value Set Relationship' page. The 'Value Set Code' is 'Corporate Company' and the 'Related Value Set Code' is 'Corporate LoB'. The 'Related Values' section is highlighted.

Click the '+' symbol in the Related Values Section to create the relationship between the segment values, as shown below.

Click on 'Save and Close'

The screenshot shows the 'Create Value Set Relationship' page. The 'Value Set Code' is 'Corporate Company' and the 'Related Value Set Code' is 'Corporate LoB'. The 'Related Values' section shows the relationship between 'US 1 LE 1 BU 1' and 'LoB 1 US1'.

Value	Description	Enabled	Value	Description
001	US 1 LE 1 BU 1	☒	10	LoB 1 US1
101	US 1 LE 1 BU 1	☒	00	None

The details of the Related Value Set Code have been updated in the corresponding Value Set Code Definitions, as shown below.

Redeploy the chart of accounts structure to make the value set relationship take effect.

(N) Setup and Maintenance > Financial Reporting Structures > Task: Manage Chart of Account Structure Instances

Ensure the deployment is successfully completed.

C) Validation:

Optionally, verify the impact of related values on account combinations on the Create Journal page.

(N) General Accounting > Journals > Task: Create a Journal

Now, only the values '00' and '10' are displayed in the LoB Segment when 'Company Code' 101 is selected.

The screenshot shows the 'Create Journal' interface. The 'Company' dropdown is set to '101'. The 'Search and Select: Line of Business' dialog is open, displaying a table with the following data:

Value	Description
00	None
10	LoB 1 US1

Once a relationship is established between the Value Sets, it must be created for all the Values within the sets. Otherwise, like in the example for Company Code 102, no LoB Values will be displayed due to the absence of a relationship.

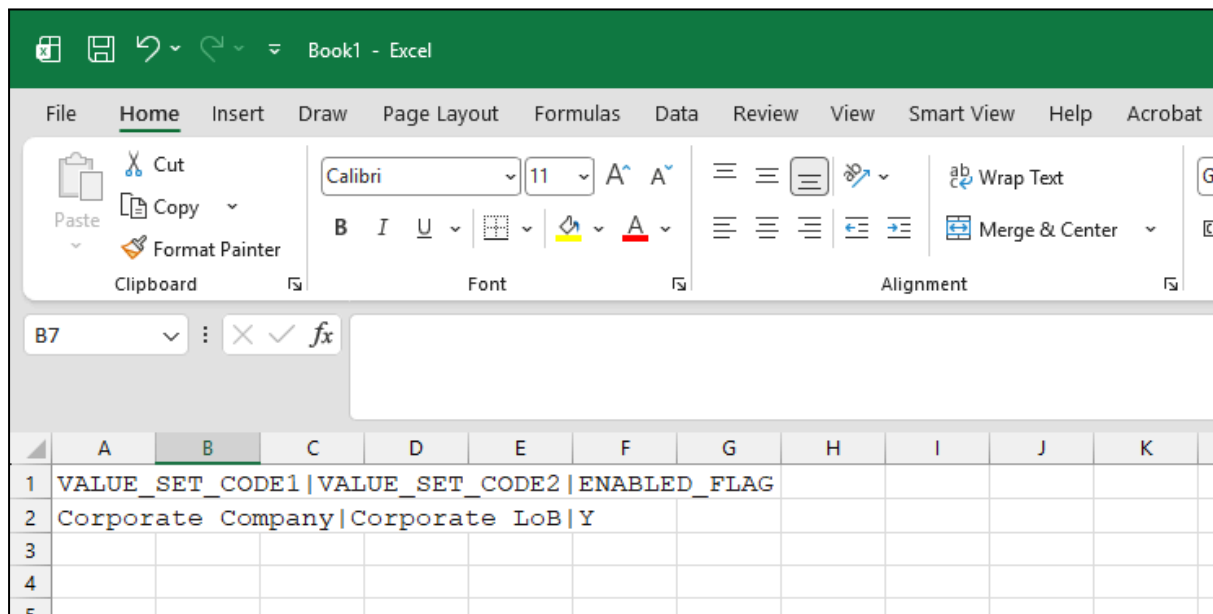

If the number of records is small, you can follow the same steps to establish the relationship. For larger datasets, use the 'Import Method' to load the relationships between value sets and/or individual values.

The screenshot shows the 'Create Journal' interface. The 'Company' dropdown is set to '102'. The 'Search and Select: Line of Business' dialog is open, displaying the message 'No rows to display'.

D) Import Method:

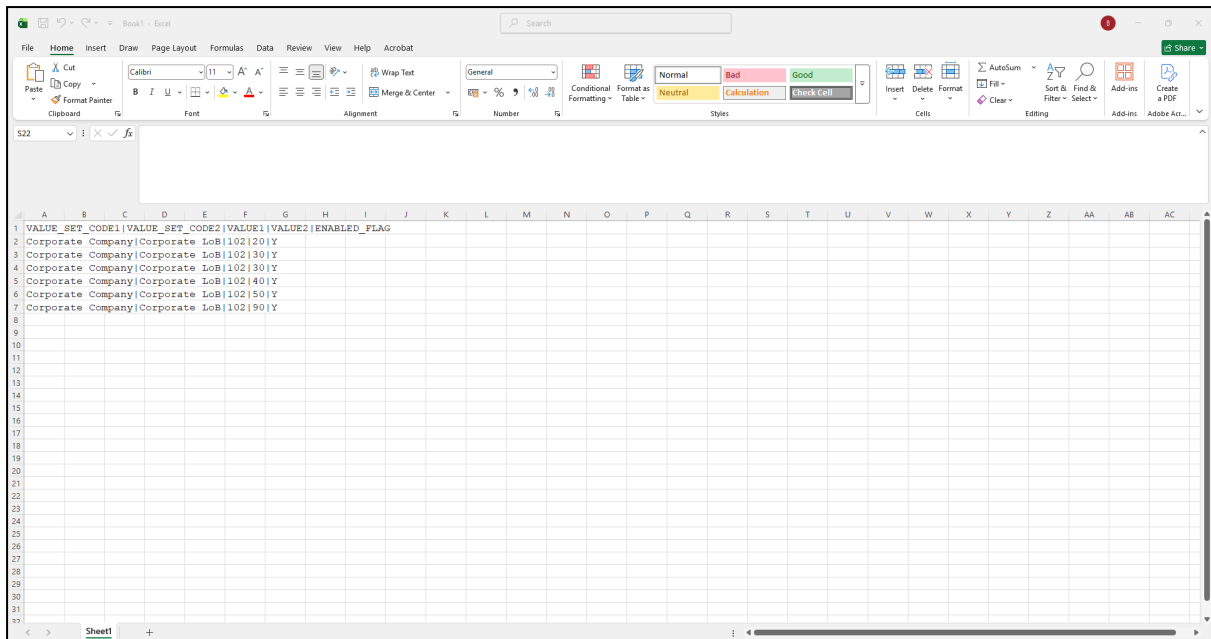

To define value set relationships:

- In the first row of the .csv file, input the header information with attributes separated by vertical bars (|):
VALUE_SET_CODE1|VALUE_SET_CODE2|ENABLED_FLAG.
- For the following rows, list the related value set names and use Y or N to specify if the relationship is active. Separate each value with a vertical bar (|).

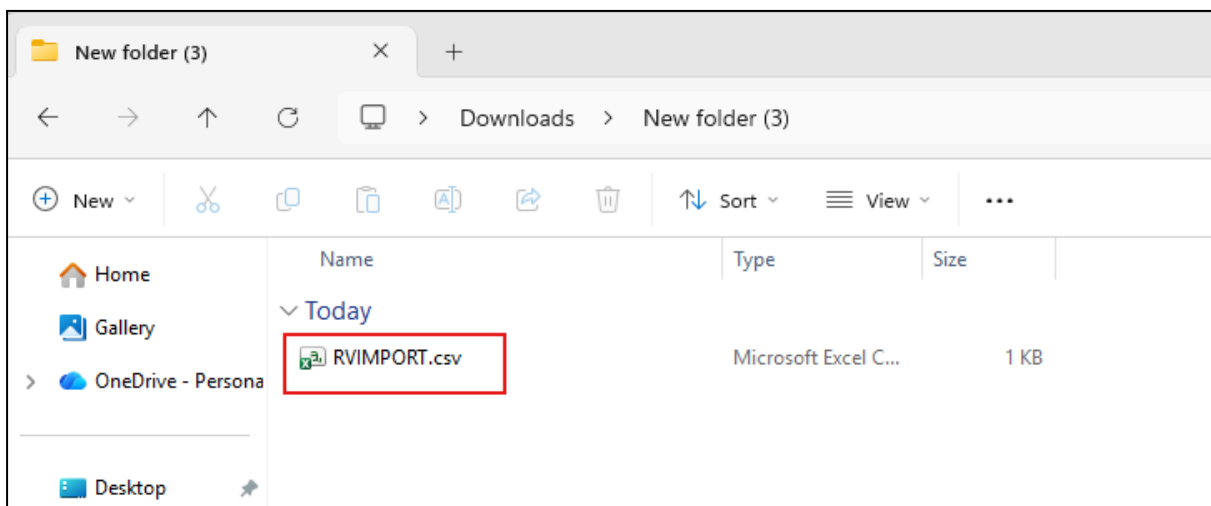

To create or maintain values for defined relationships:

- In the first row of the .csv file, input the header information with attributes separated by vertical bars (|):
VALUE_SET_CODE1|VALUE_SET_CODE2|VALUE1|VALUE2|ENABLED_FLAG.
- In the following rows, list the names of related value sets, their corresponding values, and use Y or N to specify if the row is enabled. Separate each entry with a vertical bar (|).

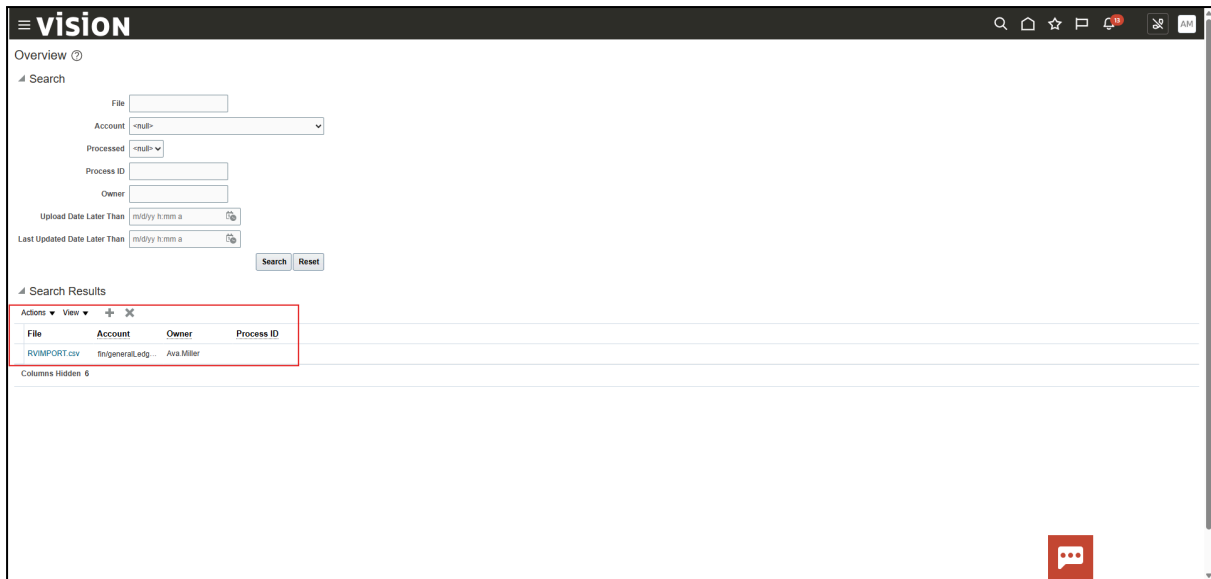

Save the file as.csv format

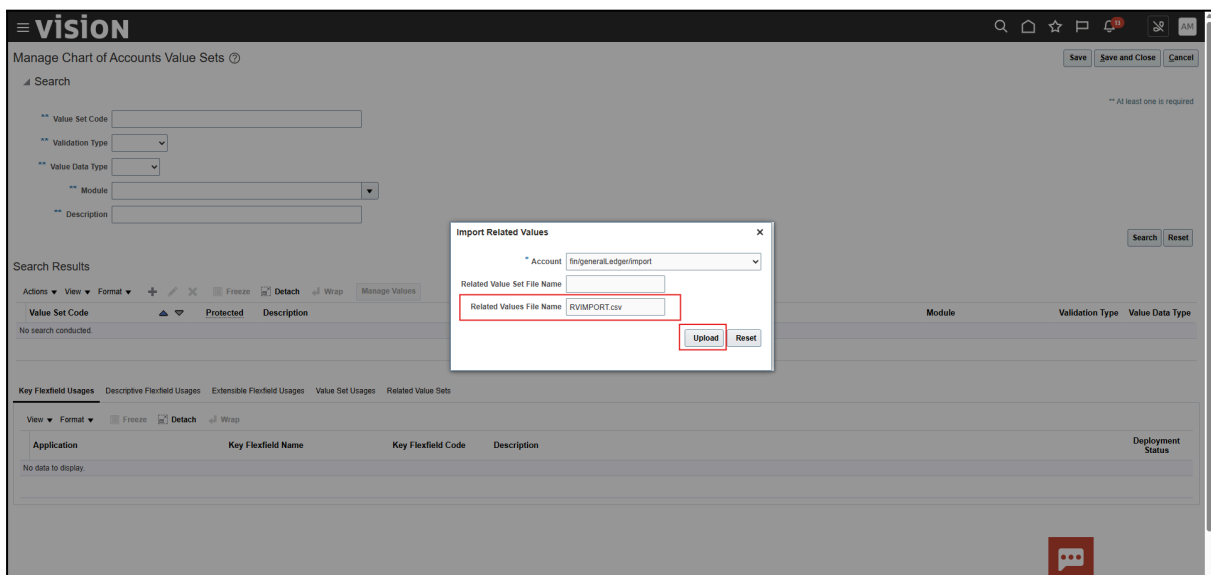

To import .csv files into the document repository:

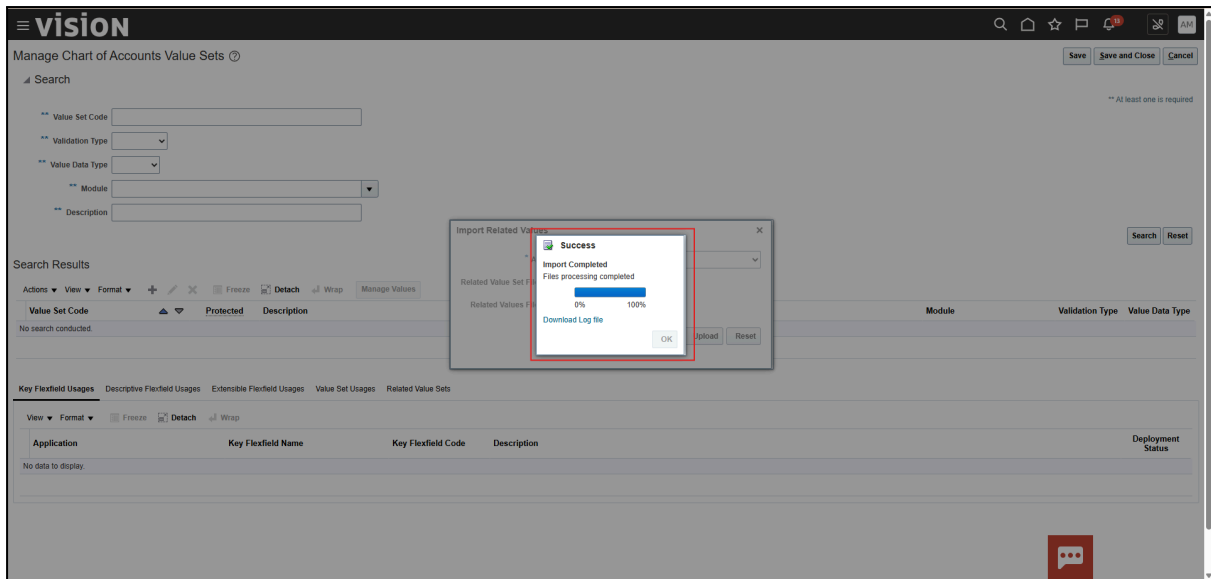

1. Go to the Tools work area and click on the File Import and Export link.
2. Click on Upload from the Actions menu.
3. Select the .csv file you prepared previously.
4. In the Account field, specify the upload location, such as fin/generalLedger/import.

To import value set relationships and associated values into the application:

1. Navigate to the Setup and Maintenance work area and select:
 - **Offering:** Financials
 - **Functional Area:** Financial Reporting Structures
 - **Task:** Manage Chart of Accounts Value Sets
2. In the Search Results section, open the Actions menu and choose Import Related Values.
3. In the Import Related Values dialog box, select the account location where you previously uploaded the .csv files.
4. Enter the file names in the Related Value Set File Name and Related Values File Name fields. If the relationship between value set pairs has already been manually established, upload only the related value file, as in our scenario.

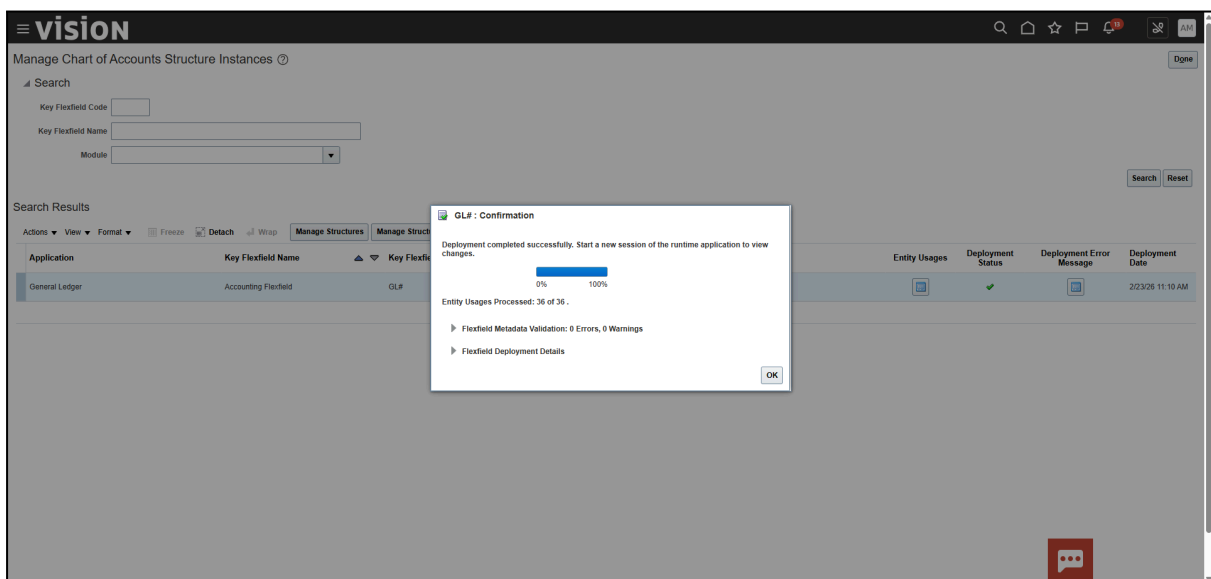

Click **Upload**.

Click the **Download Log File** link to verify the results.

After creating or updating a value set relationship, verify that the chart of accounts structure was successfully redeployed.

Optionally, verify the impact of related values on account combinations on the Create Journal page.

Note: If the relationship isn't reflected, log out and log in again to update it.

The screenshot shows the Oracle Vision 'Create Journal' page. The 'Account' window is open, showing 'Company' 102 and 'US 1 LE'. The 'Search and Select: Line of Business' dialog is also open, displaying a table of values and descriptions.

Value	Description
20	LoB 2
30	LoB 3
40	LoB 4
50	LoB 5
90	LoB 9
