# Period Close

- **Accounting Periods**

## **1- Manage Accounting Periods**

is a functionality that allows organizations to control and manage the opening, closing, and maintenance of accounting periods in their financial calendars. This feature is crucial for ensuring accurate and timely financial reporting.

You can see all types of your periods:

- ⇒ Open
- ⇒ Closed
- ⇒ Permanently Closed
- ⇒ Future Enterable
- ⇒ Never Opened

## **2- Close Monitor**

The Close Monitor in Oracle Fusion provides a hierarchical ledger set display of period close status, income statement summaries, and manager contact information across multiple ledgers and applications. It mirrors consolidation relationships and aggregates financial data at each node, offering detailed views for specific accounting periods and currencies. Each piece of information, such as period status and financial data, is displayed in navigable tags for an interactive experience.

---

- **Multicurrency**

### **1- Revalue Balances**

Revaluation launches a process that revalues the ledger currency equivalent balances for the accounts and currencies you select, using the appropriate current rate for each currency.

Resulting unrealized gain or loss amounts are posted to the unrealized gain or loss accounts or to the cumulative translation adjustment account.

## **2- Translate Balances**

The translate GL Account Balances process restates actual account balances from a ledger currency to a reporting currency.

## **3- Manage Currency Rates**

Financial institutions, such as banks, usually transact in more than one currency and this necessitates multi-currency accounting, which, in turn, requires currency rates management.

Using Currency Rates Manager, you can input cross-currency exchange rates for currencies that have been enabled in the application.

---

## **Transfer Balances to Secondary Ledgers**

Is an optional ledger linked to a primary ledger for the purpose of tracking alternative accounting.

Can differ from its primary ledger by using a different accounting method, chart of accounts, accounting calendar, currency, or processing options.

When you run the Transfer Balances to Secondary Ledger process, balances are transferred from the primary ledger to the secondary ledger.

You can fill in the required data and submit.

Go to Settings to activate Windows.

If you click on the balance, it will take you to screen Inquire on Detail Balance.

## 2- Inquire and Analyze Average Balances

The Average Balance feature of Oracle General Ledger provides organizations with the ability to track average and end-of-day balances, report average balance sheets, and create custom reports using both standard and average balances.

The difference between an **average** and **standard** balance sheet is that balances are expressed as average amounts rather than actual period-end amounts. An average balance is computed as the sum of the actual daily closing balance for a balance sheet account, **divided** by the number of calendar days in the reporting period.

## 3- Inquire on Journal Lines

The Journal Entry Inquiry window shows you information about actual, budget, or encumbrance journal entry batches in your set of books. You can review detailed information about a batch, a journal entry within that batch, and the detail lines within that entry.

Fill in the required data/criteria.
