Transaction Types (not ok)

German BU Set

One transaction type created under this BU Set

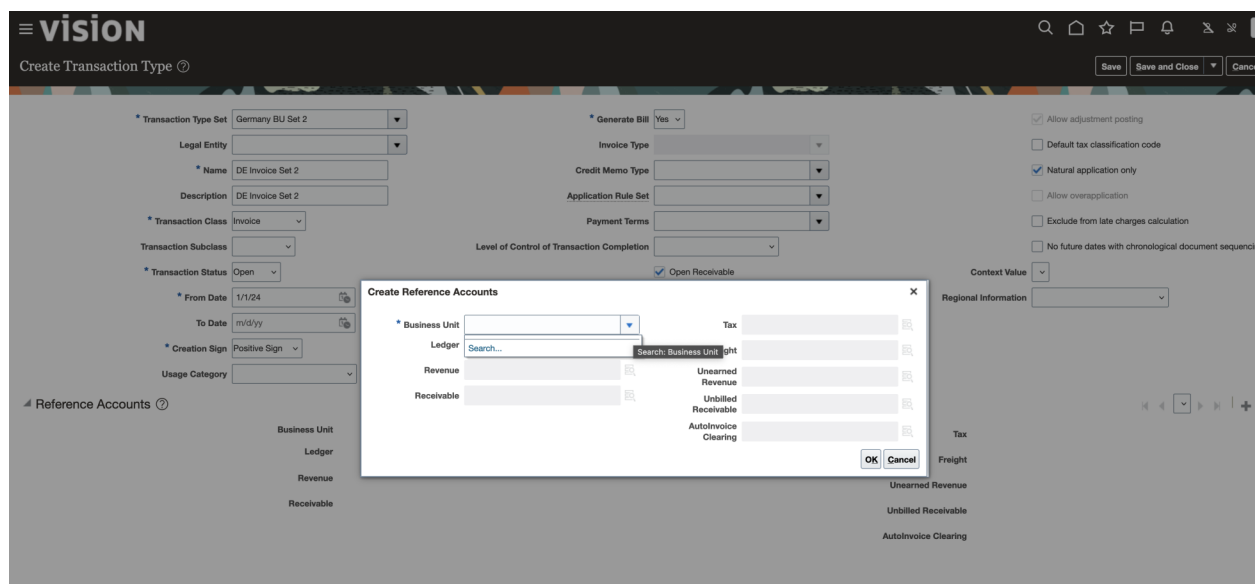

Name	Description	Transaction Type Set	Legal Entity	Transaction Class	Transaction Status	Creation Sign	From Date	To Date	Payment Terms
DE Invoice BUSET	DE Invoice BUSET	Germany BU Set		Invoice	Open	Positive Sign	1/1/24		Net 15

German BU Set 2 (not ok)

ISSUE: cannot create transaction type under **DEBUSET2** because for this business unit for transaction types following reference set is assigned: **DEBUSET**

So then, when trying to create transaction type, for reference accounts assignment it is not possible to select Business Unit.

Following error raised while creating transaction type without refence accounts.

vision
Create Transaction Type

Transaction Type Set: Germany BU Set 2 | Generate Bill: Yes

Legal Entity: DE Invoice

Name: DE Invoice

Description: DE Invoice

Transaction Class: Invoice

Transaction Subclass:

Transaction Status: Open

From Date: 1/1/24

To Date: m/d/yy

Creation Sign: Positive Sign

Usage Category:

Reference Accounts:

Business Unit: Germany Business Unit

Ledger: Germany Business Unit

Revenue: Search...

Receivable:

Tax: Tax

Freight: Freight

Unearned Revenue: Unearned Revenue

Unbilled Receivable: Unbilled Receivable

AutoInvoice Clearing: AutoInvoice Clearing

Possible Workaround

Temporally Change Reference set under BU Set Assignments to DEBUSET2 for Transaction types.

Now I can select business unit.

vision
Create Transaction Type

Transaction Type Set: Germany BU Set 2 | Generate Bill: Yes

Legal Entity: DE Invoice BUSET2

Name: DE Invoice BUSET2

Description: DE Invoice BUSET2

Transaction Class: Invoice

Transaction Subclass:

Transaction Status: Open

From Date: 1/1/24

To Date: m/d/yy

Creation Sign: Positive Sign

Usage Category:

Reference Accounts:

Business Unit: Germany Business Unit

Ledger: Germany Business Unit

Revenue: Search...

Receivable:

Tax: Tax

Freight: Freight

Unearned Revenue: Unearned Revenue

Unbilled Receivable: Unbilled Receivable

AutoInvoice Clearing: AutoInvoice Clearing

Now we have transaction type created for DEBUSET2

DATA PROCESSING

Customer Masterdata

JAN WAGNER (ok)

Can see customer sites for both Reference Data sets => this is ok

The screenshot shows the 'VISION Manage Customers' interface. The 'Customer Type' is set to 'Organization'. The search results table displays the following data:

Registry ID	Organization Name	D-U-N-S Number	Country	Primary Address
38116	Fresenius		DE	Else-Kroner-Str. 1,61352 Bad Homburg vor der Höhe,Hochtaunuskreis,Hessen
1025657	Fresenius SET2		DE	Very secret customer site address line 1,Berlin,Segeberg,Schleswig-Holstein

Below the search results, the 'Fresenius: Accounts' section shows a table with the following data:

Account Number	Account Description	Customer Class	Account Type
38116	Fresenius	Public sector companies	External

The 'Fresenius 38116: Sites' section shows a table with the following data:

Site Number	Address	Country	To Date	Purpose	Account Address Set
1349525	Test address line 1,Berlin,Stadtkreis Berlin,Bundesland Berlin	Germany		Bill to	Customer Site Set 2
1026161	Else-Kroner-Str. 1,61352 Bad Homburg vor der Höhe,Hochtaunuskreis,Hessen	Germany		Bill to, Ship to	Customer Site Set
1349527	Test address line 2,Berlin,Segeberg,Schleswig-Holstein	Germany		Bill to	Customer Site Set

This customer has only one site in “Customer Site Set 2” Reference set. And this is visible ok for Jan Wagner.

The screenshot shows the 'VISION Manage Customers' interface. The 'Customer Type' is set to 'Organization'. The search results table displays the following data:

Registry ID	Organization Name	D-U-N-S Number	Country	Primary Address
38116	Fresenius		DE	Else-Kroner-Str. 1,61352 Bad Homburg vor der Höhe,Hochtaunuskreis,Hessen
1025657	Fresenius SET2		DE	Very secret customer site address line 1,Berlin,Segeberg,Schleswig-Holstein

Below the search results, the 'Fresenius SET2: Accounts' section shows a table with the following data:

Account Number	Account Description	Customer Class	Account Type
97136	Fresenius SET2	Public sector companies	External

The 'Fresenius SET2 97136: Sites' section shows a table with the following data:

Site Number	Address	Country	To Date	Purpose	Account Address Set
1350524	Very secret customer site address line 1,Berlin,Segeberg,Schleswig-Holstein	Germany		Bill to	Customer Site Set 2

Can create customers for both Reference Data sets => this is ok

Address

Kevin can see PARTY and Account records for the customers with only site under “Customer Site Set 2”. Site itself is not visible => **this is ok**

ISSUE 1: Primary address is visible directly on the Party level => **this is not ok!**

For example, if we create Private customer, then private customer address will be visible for ALL the users who has access to customer master. This should be restricted.

Possible workaround: Create Private customers with default site with Dummy bulk address.

TRANSACTION PROCESSING (**not ok**)

JAN WAGNER

Transaction type issue

DEBUSET2 Transaction type is not available (**not ok**)

- ⇒ Here we can see only transaction types under following reference sets: COMMON, DEBUSET
- ⇒ DEBUSET2 transaction type is not visible here, even it is assigned to the user.
- ⇒ Here we can see only those transaction types which are under reference set assigned to the Business Unit in BU reference set assignments.
- ⇒ **If access needs to be restricted on transaction type level => multiple Reference sets are needed => then Multiple BU:s are needed**

The screenshot shows the 'Create Transaction: Invoice' form in the VISION software. The form includes fields for Transaction Class (Invoice), Business Unit (Germany Business Unit), Transaction Source (Manual), Transaction Type (Invoice), Transaction Number, and Document Number. A modal window titled 'Search and Select: Transaction Type' is open, showing a search results table with one entry: 'DE Invoice BUSET'. A red box highlights this entry. A text box on the right states 'Only 1 trx type is visible'.

Name	Description
DE Invoice BUSET	DE Invoice BUSET

Customer visibility issue

Jan Wagner cannot create Invoices for Customer Site Set 2. Site is not visible on the list even user is provided the access to the reference data set (Customer Site Set 2).

Site from DE site reference is not visible

CONCLUSION

It is not possible to have 2 Reference sets active for the same BU for the same Data Object (Transaction Type / Customer)

If security is required on Transaction type level => then more Business Units are required or some other custom solution is needed, reference sets cannot resolve this by standard.

Hi Evgeniya!

In Cloud subledger transactions are owned and secured by business unit (not the same concept as operating unit in eBus). You may need multiple business units if there are strong requirements to secure part of the transactions. In a multiple business unit per ledger model, accounting users would normally have access to full ledger details anyway.

Some useful reading in that context:

- [Cloud ERP Enterprise Structures White Paper \(Doc ID 2415848.1\)](#)
- [ERP Cloud -Record to Report Enterprise Structures Best Implementation Practices Blueprint \(Doc ID 2660940.1\)](#)
- [ERP Cloud -Order to Cash Enterprise Structures Best Implementation Practices Blueprint \(Doc ID 2685402.1\)](#)

Is it Possible to restrict access to users based on Transaction Type in AR?

https://community.oracle.com/customerconnect/discussion/comment/1039219#Comment_1039219?utm_source=community-search&utm_medium=organic-search&utm_term=transaction+type+sets
