```

Verify the same in Document Tools, where the status changes from “Ready to Publish” to “Published”.

The screenshot shows a configuration form for a tool named "DHAK_DOC_AI_AGENT_TOOL". The form is titled "DHAK_DOC_AI_AGENT_TOOL" and has "Cancel" and "Save" buttons at the top right. The form fields are as follows:

- Tool Type:** Document
- Tool Name:** DHAK_DOC_AI_AGENT_TOOL
- Tool Code:** DHAKDOCAIAGENTTOOL
- Family:** PRC
- Product:** Purchasing
- Description:** Chola Empire

Below the description field, there is a toggle switch for "Require human approval" which is currently turned off. A note below the toggle says "Enable if you want human approval before running the tool."

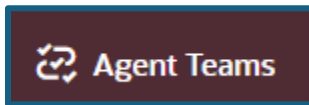

Under the "Documents" section, there is a "+ Add" button. Below this, a table lists the documents:

Document Name	Description	Status	Actions
Chola Empire	Chola Empire	Published	✎ ⌵

The bottom of the form shows a navigation bar with the following items: AI Agent Studio, Agent Teams, Agents, Tools, Topics, Deep Link, and Business Object.

5. Create Agent Teams

Navigate to “Agent Teams”

Click “Add” Button to create.

Summarization Mode
Enabled using default prompt

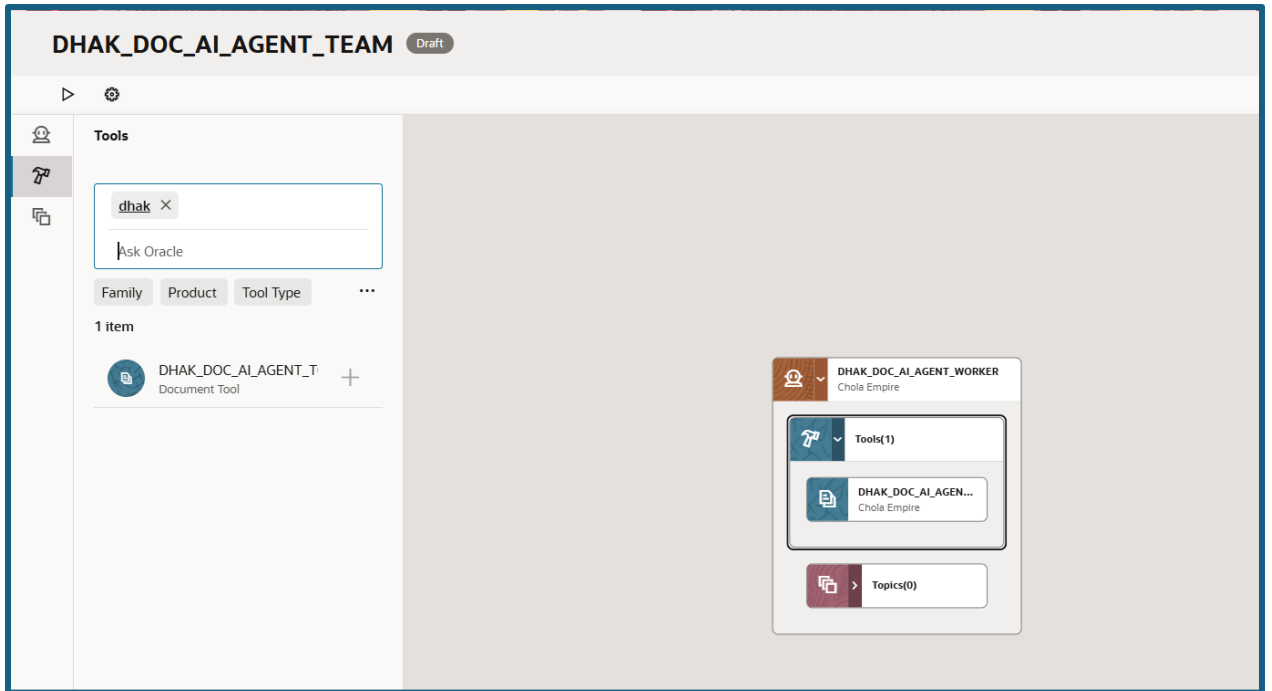

Summarization Prompt

Based on the information through the chat history and/or tool call responses, construct a clear, professional, and user-friendly answer to address the user's original query.
construct an answer that addresses the user's original query.
Your answer should be directed towards the user and should be friendly, professional, and concise. If you are not able to answer the user's question based on the tool calls or through the chat history, you should let them know that you do not have access to that information.

--ANSWER REQUIREMENTS--
Your answer should be based only on the information available to you in the tool calling chat history. You should never invent or make up answers. If the question requires you to synthesize answers across several tool responses, you should do that. Note that some information may need to be summarized from across multiple places in a given object. Use your inference and semantic knowledge to derive the answer from the data without inventing anything.

--ADDITIONAL REQUIREMENTS--
* Do not mention tool calls, chat history, underlying operations, or system processes.
* Keep the response natural and conversational without unnecessary preambles.
* Provide a direct and engaging response without phrases like "Based on tool calls" or similar references.
* Do not append any characters or trailing Periods (.) at the end of valid URLs.
* If link is generated by DeepLink tool do not remove from response.

5.2 Add Tools by click the tool and “+” to add tools to worker agent.

Click on Save.

6. Testing for AI Agent by clicking on “Play” Button.
