

Oracle Fusion Account Payables

Basic Setups;

1. Set up Common Options for Payables and Procurement
2. Create Reference Data Set
3. Create Payment Terms
4. Assign Payment Terms to RDS
5. Assign RDS to BU
6. Set up Invoice Options
7. Set up Payment Options
8. Create Distribution Set
9. Create Procurement Agent
10. Assign Supplier Manager Role to User
11. Run LDAP Job
12. Set Supplier Numbering
13. Create Supplier Profile, Address, Site, and assign to BU
14. Assign 'Cash Manager' Role to User
15. Assign LE to the Cash Manager Role
16. Submit LDAP Job
17. Create Bank, Branch, Bank Account, and assign to BU
18. Create Payment Process Profile (PPP)
19. Assign AP Roles to User
20. Assign Business Unit to AP Roles
21. Run LDAP Job
22. Open AP Periods

1. Setup Common Options for Payables and Procurement

Overview

We configure **Common Options** primarily for **Payables**, but they also feed into **Procurement**. These settings define default accounts the system uses when invoices and payments generate accounting entries. Since this is **Business Unit-specific**, each BU can have its own mapping.

What does it mean? Every time you create a supplier invoice or payment in a given BU, Fusion knows exactly which ledger accounts to hit – streamlining month-end close and ensuring consistency.

Navigation

1. Global Search → **Manage Common Options for Payables and Procurement**
2. Select the task → **Apply and Go to Task**
3. Choose your **Business Unit** → Save and Close

Default Account Mappings

Once the BU is selected, specify these key accounts:

1. **Liability Account**
 - Default AP liability for accrued invoices. **What does it mean?** When you post an invoice, this account holds the liability until payment.
2. **Discount Taken**
 - Account for early-payment discounts captured. **What does it mean?** Tracks savings when you pay invoices before due date.
3. **Prepayment**
 - Account for pre-paid expenses. **What does it mean?** Holds funds paid in advance until goods/services are received.
4. **Realized Gain Distribution**
 - Account for currency gains on payments. **What does it mean?** Captures favourable exchange-rate differences when settling foreign-currency payables.
5. **Realized Loss Distribution**
 - Account for currency losses on payments. **What does it mean?** Records unfavorable exchange-rate differences on the payment of foreign invoices.
6. **Conversion Rate Variance Loss**

- Account for unrealized currency losses. **What does it mean?** Tracks exchange differences between the invoice date and the reporting date before payment.

7. Conversion Rate Variance Gain

- Account for unrealized currency gains. **What does it mean?** Reflects favorable exchange differences prior to invoice settlement.

Rapid Implementation Note

- If you've loaded this BU via **Rapid Implementation**, Fusion auto-tags these accounts (including **Retained Earnings**) based on RI tagging rules.
- Auto-creation of accounting combinations works only if you have a **single BU**. With multiple BUs, you must manually enter or adjust mappings.

What does it mean? RI gives you a fast start with one BU—but multi-BU environments require manual validation of each account default

2. Create Reference Data Set

3. Create Payment Terms

4. Assign Payment Terms to RDS

5. Assign RDS to BU

This guide walks you through provisioning **Payment Terms** to **Business Units (BUs)** using **Reference Data Sets (RDS)** in Oracle Fusion Cloud. You'll learn:

1. What is an RDS and why it matters?
2. How to create an RDS
3. How to define Payment Terms
4. How to assign those terms to an RDS
5. How to assign an RDS to a BU
6. Navigation steps in FSM/Setup & Maintenance

2. Create Reference Data Set (RDS)

What does it mean? A **Reference Data Set (RDS)** is a named collection of common setup data (e.g., Payment Terms, Tax Codes) that you can share across multiple organizational entities (Business Units, Legal Entities, Departments).

Why use RDS?

- **Shared data:** Avoid re-entry – give multiple BUs the ABCe information.
- **Specific data:** Tailor data (e.g., unique Payment Terms) to a single BU.
- **Efficiency:** Centralize and manage setup data in one place.

Example Scenario

- **Payment Terms → RDS → BU**
 - **Payment Terms list:**
 - Net 45 (for BU2)
 - Net 30 (for BU2)
 - **Immediate** (for BU1)
1. **RDS1** includes **Immediate** → assigned to **BU1**
 2. **RDS2** includes **Net 45 & Net 30 & Immediate** → assigned to **BU2**

Key Point: You cannot grant a BU direct access to setup data. You provision it via RDS.

Navigation

1. Navigator → **Setup and Maintenance**
2. Global Search → **Manage Reference Data Sets** → Go to Task
3. Click **Create (+)**
4. Enter:
 - **Name:** RDS1 (e.g., PAY_TERMS_RDS1)
 - **Description:** “Immediate terms for BU1”
5. Save

3. Create Payment Terms

What does it mean? **Payment Terms** define when an invoice is due and any early-payment discounts. They drive your **Due Date** and **Discount** calculations.

Two Key Points for Payment Terms

1. **Due Date** – Number of days until payment is due (e.g., 30 days)
2. **Discounts** – Percentage off for early payment

Common Payment Terms

- **Net 45**
- **Net 30**
- **Immediate** (ABCe-day payment; seeded by Oracle in every instance)

Tip: Always prefer Oracle-provided terms; if you create “Immediate” yourself, you must still include the seeded “Immediate” in your RDS so the system picks it up correctly.

Purpose of Payment Terms

- Automatically calculate **Due Date**
- Enforce **Discount** rules if paid before due date

Q: Can we assign Payment Terms directly to a BU? A: No. BUs can only access terms via an RDS.

Navigation

1. Navigator → **Setup and Maintenance**
2. Global Search → **Manage Payment Terms** → Go to Task
3. Click **Create (+)**
4. Fill in:
 - **Name:** e.g., NET_30

- **Description:** “30-day payment”
- **Days:** 30
- **Discount:** e.g., 2% if paid in 10 days (optional)

5. Save

4. Assign Payment Terms to RDS

What does it mean? Link your Payment Terms to an RDS so that only BUs assigned to that RDS can use those terms.

Example

- **Common Terms RDS:** Net 30, Net 45
- **Specific Terms RDS:** Immediate

Steps

1. Navigator → **Setup and Maintenance**
2. Global Search → **Manage Reference Data Sets** → Go to Task
3. Open **RDS1** (e.g., PAY_TERMS_RDS1)
4. Click **Actions** → **Edit**
5. In the **Reference Data** section, click **Add** and select the desired Payment Terms (e.g., Immediate)
6. Save

5. Assign RDS to Business Unit (BU)

What does it mean? You grant a BU access to all data in an RDS. A BU can only use setup entries from its assigned RDS.

Example

- **Shared RDS:** Net 30 → assigned to **BU2**
- **Specific RDS:** Immediate → assigned to **BU1**

Steps

1. Navigator → **Setup and Maintenance**
2. Global Search → **Manage Reference Data Sets** → Go to Task
3. Open the RDS you wish to assign
4. Click **Assign To** → **Add Business Unit**
5. Select the BU (e.g., BU1) → **Apply**

6. Save

Navigation Deep Dive 🌀

- **Global Search:**
 - Most rapid way – type part of the task name (e.g., “Manage Payment Terms”) and hit Enter.
- **Setup and Maintenance (FSM):**
 1. Click your **User Name** → **Settings and Actions** → **Setup and Maintenance**.
 2. On the FSM landing page, click **Tasks** → **Search** or filter by Offering (e.g., Payables).
- **Rapid Implementation:**
 - Uses a **Common** RDS by default. If you need custom RDS, create and assign it first.

Key Takeaways 🎯

- **RDS** = the gatekeeper for setup data access
- **Payment Terms** must exist before assignment to RDS
- **BUs** can only see terms via RDS → BU link
- **Immediate** Payment Terms are seeded by Oracle; reuse them
- **Navigation** via Global Search or FSM ensures you find tasks quickly

With this minimal-trim, emoji-enhanced guide, you’ll efficiently provision Payment Terms – keeping your Business Units focused on the right data without over-exposure or manual duplication. 🚀

6. Set up Invoice Options

7. Set up Payment Options

Oracle Fusion Payables: Invoice Options & Payment Options Guide 🚀

Overview 🎯

- **Invoice Options** configure how you **create and process** invoices in each Business Unit (BU).
- **Payment Options** define how you **execute and automate** payments per BU.
- Both options can be **common** (shared across BUs) or **BU-specific**—you decide based on your organizational structure.

📄 **As of now** You may not need to set these options immediately if you're just exploring Payables functionality. Focus first on understanding core AP concepts, then return to fine-tune these options.

1. Setup Invoice Options 📄

What does it mean?

Invoice Options let you tailor the *Accounts Payable* module's behavior for your BU: defining invoice types, matching rules, tax handling, and approval workflows.

Key Fields & "What does it mean?"

Field	What does it mean?
Business Unit	The BU to which these Invoice Options apply.
Invoice Defaults	Choose default invoice type (e.g., Standard, Credit Memo).
Payment Terms	Default terms (Net 30, Immediate) used to calculate due dates.
Matching & Validation	Tolerances (%) and controls for matching invoices to POs/receipts.
Tax Handling	Default tax regime, rates, and applicability on invoices.
Withholding Tax	Rules to automatically withhold tax for specific suppliers.
Payment Methods	Default method (e.g., Electronic) for disbursing funds.
Invoice Approval	Enable/configure multi-level approval workflows.

🔍 **Example:**

- **BU 1:** Net 30 terms, 2% early-payment discount, standard PO matching tolerance of $\pm 5\%$.
- **BU 2:** Immediate payment, strict matching ($\pm 1\%$), additional invoice-approval step.

Navigation to Invoice Options

1. **Global Search** : Type **Manage Invoice Options** → **Go to Task**
2. **FSM:**
 - Click **Your Name** → **Settings and Actions** → **Setup and Maintenance**
 - On FSM home, click **Tasks** → **Search** → enter **Invoice Options**

'Manage Invoice Options' Task – Steps

1. **Select BU**
 - Click **Business Unit** → **Select and Add** → choose your BU (e.g., *ABCINC US Business Unit*) → **Apply** → **Go to Task**
2. **Review/Set Fields**
 - **Invoice Defaults:** Pick your invoice type.
 - **Payment Terms:** Confirm only RDS-assigned terms appear.
 - **Matching & Validation:** Adjust tolerances.
 - **Tax & Withholding:** Set default tax handling.
 - **Approval & Methods:** Enable workflows, choose default methods.
3. **Save and Close**

 *Note:* If you need new Payment Terms, create them via **Manage Payment Terms**, add to your RDS, then return here to see them.

2. Setup Payment Options

What does it mean?

Payment Options determine how the system **releases and processes** supplier payments – covering methods, schedules, and automation logic.

Key Fields & “What does it mean?”

Field	What does it mean?
Payment Process	Sequence of steps: submission, approval, creation of payment files.
Allowed Methods	e.g., Electronic Funds Transfer, Check, ACH.

Field	What does it mean?
Bank Account	Default pay-from bank account for this BU.
Payment Formats	File formats for electronic transfers (e.g., ACH, SEPA).
Payment Scheduling	Cut-off times and batch windows for processing payments.
Remittance Advice	Automatic generation and delivery of remittance notices.
Pre-payment Controls	Validation rules before payment execution.

💡 **Example:**

- **BU A:** Pay via electronic file daily at 5 PM, generate PDF remittance.
- **BU B:** Weekly check runs on Fridays, no electronic transfers.

Navigation to Payment Options 🗨️

1. **Global Search** 🔍: Type **Manage Payment Options** → **Go to Task**
2. **FSM:**
 - **Your Name** → **Settings and Actions** → **Setup and Maintenance**
 - On FSM home, click **Tasks** → **Search** → enter **Payment Options**

'Manage Payment Options' Task - Notes

- **No mandatory fields** at initial rollout – get comfortable with AP flows first.
- Once you **create new Payment Terms** and include them in your RDS, you'll automatically see them during invoice entry – no re-assignment of payment options needed.
- Later, fine-tune **Allowed Methods**, **Payment Scheduling**, and **Remittance Advice**.

3. Common vs. BU-Specific Options 🔄

- **Common Options:** If no BU distinction, build one set of Invoice & Payment Options and apply globally.
- **BU-Specific:** Create separate options per BU to honor local policies, tax laws, or bank setups.

4. Purpose Summary 🎯

- **Invoice Options:** Define *how invoices* are created, matched, validated, taxed, and approved.
- **Payment Options:** Define *how payments* are executed, scheduled, and communicated.

- Both are configured per BU (or shared as *common* options) to align with organizational requirements.

5. Navigation Deep Dive & Tips 🧰

Method	How to Access	Best For
Global Search	Click 🔍 in the header, type task name (e.g., “Manage Invoice Options”), press Enter.	Quick access without remembering menus.
Favorites	In Search or FSM, click ★ next to tasks to bookmark.	One-click navigation to your frequent tasks.
FSM – Task List	Your Name → Settings & Actions → Setup and Maintenance → Tasks → Filter/Sort.	Guided, role-based view of all tasks.
Rapid Implementation	Guided flow for Payables; uses Common RDS by default. Override with custom RDS.	Fast deployment for standard use cases.

💡 **Pro Tip:** Create a **spreadsheet** listing your BUs and required Invoice/Payment Options – then knock out configuration in one sweep!

8. Create Distribution Set

Oracle Fusion Payables: Distribution Sets & Invoice Distribution

Overview

- **Distribution Set:** Predefined percentage rules that auto-split an invoice amount among multiple accounts.
- **Invoice Distribution:** The actual allocation of an invoice's total to specific accounts – either manually or via a Distribution Set.
- Both features are **BU-specific** but optional: you can invoice without a Distribution Set or automate with one.

Navigation

1. **Global Search** : Type **Manage Distribution Sets / Invoice Distribution** → **Go to Task**
2. **FSM:**
 - Click **Your Name** → **Settings and Actions** → **Setup and Maintenance**
 - On FSM home → **Tasks** → **Search** → enter **Distribution**

1. Distribution Set

What does it mean?

A **Distribution Set** is a collection of accounts plus percentage rules so the system can automatically split your invoice amounts.

Example

- Computer Account 90%
- Tax Account 9%
- Freight Account 1%
- For a \$10,000 invoice, the system posts \$9,000 to Computer, \$900 to Tax, \$100 to Freight.

Why use it?

- **Automation:** Saves manual entry each invoice.
- **Accuracy:** Enforces consistent allocation rules.
- **Flexibility:** Create “Skeleton” sets with partial percentages for later completion.

Create a Distribution Set

1. **Open Manage Distribution Sets** via Global Search or FSM Tasks.
2. **Click Create (+).**
3. **Fields:**
 - **Business Unit:** Dropdown → Search & select (e.g., ABCINC US Business Unit)
 - **Name:** e.g., Computers
 - **Distribution Percentage:** Total % covered by this set (commonly 100% for full sets or 0% for skeletons)
4. **Distribution Set Details**
 - Click + to add lines:
 - Ensure each combination belongs to the selected BU.
5. **Save and Close.**

Skeleton Partial Set

- **Name:** Furniture
- **Distribution Percentage:** 0 (you'll manually fill percentages on invoice entry).

2. Invoice Distribution

What does it mean?

Invoice Distribution defines exactly how a single invoice's total is split across accounts or cost centers. You can enter distributions manually or automate with a Distribution Set.

Manual vs. Automated

- **Manual:** During invoice entry, you type each line's amount or percentage.
- **Automated:** Select your Distribution Set, and the system calculates line amounts.

Example Calculation

Invoice Total: \$10,000

Distribution Set:

- Computer 90% → \$9,000
- Tax 9% → \$900
- Freight 1% → \$100

Is a Distribution Set Mandatory?

- **No**—you can always allocate manually after creating an invoice.

- **Yes** for automation – use a Distribution Set to auto-split amounts.

! **Note:** Oracle provides **no** predefined Distribution Sets – you must create them.

Additional Points on Distribution Sets 🌐

- **Purpose:** Ensure expenses are captured in the correct accounts, departments, or projects for accurate GL posting, reporting, and budgeting.
- **Scenarios:**
 - **Office Supplies:** \$10,000 split \$6,000 to Marketing, \$4,000 to IT.
 - **Construction Projects:** \$50,000 invoice split among multiple project codes.
- **Benefits:** Automates allocation, reduces errors, and speeds up invoice processing.

Oracle Fusion Procurement: Procurement Agent & Supplier Setup Guide 📋

Create a Procurement Agent (buyer)

1. **Assign the Supplier Manager role and synchronize**
2. **Specify Supplier Numbering**

Every field and step is explained with “What does it mean?” callouts, examples, and navigation tips.

Overview 🚀

- **Procurement Agent:** A *buyer* role required for supplier creation.
- **Supplier Manager:** A security role that authorizes supplier record management.
- **Supplier Numbering:** Determines how new supplier IDs are auto-generated.
- Fusion requires both **Procurement Agent** classification **and** the **Supplier Manager** role – unlike EBS, where any user could add suppliers.

9. Create Procurement Agent
10. Assign Supplier Manager Role to User
11. Run LDAP Job
12. Set Supplier Numbering
13. Create Supplier Profile, Address, Site, and assign to BU

1. Create Procurement Agent

What does it mean?

A **Procurement Agent** is an employee user designated as a buyer. Only Procurement Agents with the **Manage Suppliers** privilege can create new supplier records in Oracle Fusion.

Key Fields & Definitions

Field	What does it mean?
Procurement BU	The <i>Business Unit</i> context in which the agent operates (e.g., ABCINC US Business Unit).
Agent	The <i>Employee User</i> assigned this buyer role (e.g., JOHN_DOE).
Default Requisitioning BU	(Optional) The BU auto-selected when this agent creates requisitions.
Manage Suppliers	A checkbox that, when enabled, grants the agent the ability to create and update supplier records.

Navigation to “Manage Procurement Agents”

1. **Global Search** : Type **Manage Procurement Agents** → click **Go to Task**.
2. **FSM**:
 - Click **Your Name** → **Settings and Actions** → **Setup and Maintenance**.
 - On FSM home, click **Tasks** → **Search** → enter **Procurement Agents**.

Steps to Create

1. Click **+** (Create).
2. **Procurement BU** → **Search and Select** your BU (e.g., ABCINC US Business Unit) → **OK**.
3. **Agent** → Enter the Employee User (e.g., JOHN_DOE).
4. **Default Requisitioning BU** (optional) → pick the BU that should pre-populate on requisitions.

5. **Enable Manage Suppliers** → gives supplier creation rights.

6. **Save and Close.**

Example:

- Procurement BU: **ABCINC US**
- Agent: JOHN_DOE
- Default Req BU: **ABCINC US**
- Manage Suppliers: 

2. Assign Supplier Manager Role & Synchronize

What does it mean?

The **Supplier Manager** role provides the *security entitlement* needed to access the supplier creation UI and APIs. After assignment, running the **User and Role Synchronization** (LDAP) process applies this new role to the user's session.

Navigation to "Manage Users"

1. **Global Search**  : **Manage Users** → **Go to Task.**
2. **FSM:**
 - **Settings and Actions** → **Setup and Maintenance** → **Tasks** → **Search Users.**

Steps to Assign Role

1. Locate the **Employee User** (e.g., JOHN_DOE).
2. Click **Edit** → **Add Role** → select **Supplier Manager** → **Done** → **Save.**

LDAP Synchronization

Why? Oracle Fusion leverages LDAP for enterprise identity. Syncing ensures new roles take effect immediately.

1. **Global Search**  : **Manage Scheduled Processes** → **Go to Task.**
2. Search for **User and Role Synchronization.**
3. Select and **Run** the process.
4. Confirm **Status = Succeeded** in the process log.

 *Tip:* Schedule this as a nightly job if you frequently update roles.

3. Specify Supplier Numbering

What does it mean?

Supplier Numbering defines the *next supplier ID* that Oracle Fusion will generate. Customizing this ensures supplier IDs align with client preferences or existing numbering sequences.

Navigation to “Specify Supplier Numbering”

1. **Global Search** : **Specify Supplier Numbering** → **Go to Task**.
2. **FSM**:
 - **Settings and Actions** → **Setup and Maintenance** → **Tasks** → search **Supplier Numbering**.

Steps to Configure

1. On the **Specify Supplier Numbering** page, note the **Next Supplier Number** (e.g., 00001).
2. To align with client needs (e.g., start at 10000), overwrite the default value.
 -  In practice instances, leave it at the seeded link to avoid conflicts.
3. **Save**.

Caution: If you set a number already in use, Fusion will block new supplier creation until you adjust the sequence.

Quick Recap

1. **Procurement Agent**: Classify employee + enable **Manage Suppliers**.
2. **Supplier Manager** role: Assign via **Manage Users** + run **LDAP Sync**.
3. **Supplier Numbering**: Define the starting ID using **Specify Supplier Numbering**.

Oracle Fusion Procurement: Supplier Profile, Address, Site & BU Assignment

Overview In Oracle Fusion, setting up suppliers involves four key parts:

1. **Supplier Profile** – Core details and business relationship.
2. **Address** – Physical locations for orders/invoices.
3. **Supplier Site** – Named link to an address for transactions.
4. **BU Assignment** – Which Business Units can use each site.

You cannot invoice a raw address – only a **Site**. And only **Spend Authorized** suppliers allow transactions. Use the **Navigator** or **Global Search** to access tasks, detailed below.

1. Create Supplier Profile

What does it mean? A **Supplier Profile** is the master record defining how you can transact with a supplier (invoices, POs).

Key Fields & “What does it mean?”

Field	What does it mean?
Supplier Name	Unique name or number (e.g., ABCINC Supplier-1). No prefix required – keep it concise.
Business Relationship	Use Spend Authorized to enable POs/Invoices; Prospective for sourcing/negotiations only.
Creation Date	Date the profile is created (e.g., 15-06-24).
Creation Source	Indicates manual entry vs. spreadsheet import (e.g., Manual, File Loader).
Tax Organization Type	Supplier’s legal structure (e.g., Corporation, Partnership).

Navigation to “Create Supplier”

1. Navigator → Procurement → Suppliers → Task List
2. Click **Create Supplier**

Steps to Create

1. Enter:
 - **Supplier** = ABCINC Supplier-1
 - **Business Relationship** = Spend Authorized
 - **Creation Date** = 15-06-24
 - **Creation Source** = Manual
 - **Tax Organization Type** = Corporation
2. Click **Create** → **Profile** tab appears with generated **Supplier Number**.
3. **Profile Details**: Optionally configure payment terms, currencies, or payment methods here.

Example:

- Supplier: ABC Widgets
- Relationship: **Prospective** (no transactions)

2. Address Setup 🏠

What does it mean? An **Address** stores the supplier's full location details – but you cannot transact directly against it.

Key Fields & "What does it mean?"

Field	What does it mean?
Address Name	Internal identifier (e.g., ABCINC NY Address).
Address Purpose	Flags: Ordering , Remit To , RFQ/Bidding .
Country	ISO country (e.g., United States).
Address Line 1	Street address (e.g., 123 Main St).
Postal Code	Zip/Postal code (e.g., 00544).

Navigation to "Addresses" 🗖️

1. In your **Supplier Profile**, click the **Addresses** tab.
2. Click **Create (+)** if needed.

Steps to Create

1. **Address Name** = ABCINC Address
2. **Purpose** = ☒ **Ordering** ☐ **Remit To** ☐ **RFQ/Bidding**
3. **Country** = United States
4. **Address Line 1** = ABCINC NY Address
5. **Postal Code** = 00544
6. Click **Save and Close**

Note:

- **Ordering** = where POs are sent.
- **Remit To** = where invoices/payments go.
- **RFQ** = sourcing/bidding location.

3. Create Supplier Site 📍

What does it mean? A **Supplier Site** names an address so you can use it in POs and Invoices. Each Site links one address and caps your transaction location.

Key Fields & "What does it mean?"

Field	What does it mean?
Site Name	User-friendly label (e.g., NY).
Site Purpose	Flags: Purchasing, Pay, Invoicing .
Address	Pick the Address you just created.
Procurement BU	BU that uses this Site (e.g., ABCINC US Business Unit).

Navigation to “Sites”

1. In **Supplier Profile**, click the **Sites** tab next to Addresses.
2. Click **Create (+)**.

Steps to Create

1. **Procurement BU** = ABCINC US Business Unit
2. **Address** = select ABCINC Address
3. **Site Name** = NY
4. **Site Purpose** = ☒ **Purchasing & Pay**
5. Click **Save**

Tip: The Site Name appears on POs/Invoicing screens – choose a clear, short label.

4. Configure Invoicing & Payments

What does it mean?

Define **default currencies** and **payment methods** at the Site level for invoice/payment processing.

Invoicing Tab

Field	What does it mean?
Invoice Currency	Default currency for invoices (e.g., USD).
Payment Currency	Default currency for payments (e.g., USD).

Payments Tab

Field What does it mean?

Payment Method Default method: Check, EFT, Credit Card, etc.

1. Click **Invoicing** → set currencies → **Save**.

2. Click **Payments** → select default payment method → **Save**.

Example:

- Invoice Currency = **US Dollar**
- Payment Method = **Check**

5. Assign Site to Business Units 🏢

What does it mean? Grant specific BUs access to this Site — so only those BUs can create POs or payments against it.

Key Fields & “What does it mean?”

Field **What does it mean?**

Client BU BU making the **requisition** or creating the PO.

Bill-to BU BU responsible for **payment**. Often ABCe as Client BU.

Navigation to “Site Assignments” 🗨️

1. In **Supplier Profile**, click **Site Assignments** tab.
2. Click **Create (+)**.

Steps to Assign

1. **Client BU** = ABCINC US Business Unit
2. **Bill-to BU** = ABCINC US Business Unit
3. Click **Save and Close**

Note:

- One Site can serve multiple BUs.
- To assign another BU (e.g., UK BU), ensure the employee user has Procurement Agent access for that BU and repeat the assignment.

6. Spend Authorized vs. Prospective 🔄

Relationship	What does it mean?
Spend Authorized	Supplier can receive POs and payables (active transactions).
Prospective	Supplier only for sourcing/negotiations — no POs or invoices can be created.

Set **Business Relationship** on the **Profile** tab accordingly.

Quick Recap

1. **Supplier Profile** – Define core details and **Spend Authorized** vs. **Prospective**.
2. **Address** – Create physical locations with **Purpose** flags.
3. **Supplier Site** – Link address to a named Site for transactions.
4. **Invoicing & Payments** – Set default currencies and payment methods.
5. **Site Assignments** – Enable specific BUs to transact with the Site.

Follow these steps to ensure precise, role-based supplier setups – so every invoice, PO, and payment flows to the right account, address, and BU. 

14. Assign 'Cash Manager' Role to User

15. Assign LE to the Cash Manager Role

16. Submit LDAP Job

17. Create Bank, Branch, Bank Account, and assign to BU

Oracle Fusion Cash Management: Role & Data Setup 💰

Overview Before users can create or manage bank accounts (e.g., branch accounts), they need the right **roles** and **data access** in Oracle Fusion. This involves:

1. **Assigning the Cash Manager role**
2. **Granting Legal Entity (LE) access** to that role
3. **Running the User & Role Synchronization (LDAP) job**

Once complete, the user can own and operate bank accounts under the correct company (Legal Entity).

1. Assign the Cash Manager Role 👔

What does it mean? The **Cash Manager** role grants permissions to perform cash-management tasks, such as:

- Bank account creation & maintenance
- Bank statement reconciliation
- Cash flow monitoring & transfers
- Access to Cash Management reports

Key Field

- **Role Name:** "Cash Manager" (prefixed by [ORA] in Fusion's seeded roles)

Navigation 🗨️

1. **Global Search** 🔍: Enter **Manage Users** → **Go to Task**
2. Locate and **Edit** the target user (e.g., JOHN_DOE).
3. In **Job Roles**, click **Add Role** → select **[ORA] Cash Manager** → **Done** → **Save**.

Example: Assigning [ORA] Cash Manager lets JOHN_DOE reconcile bank statements and create new bank accounts under approved companies.

2. Grant Legal Entity (LE) Access 🔑

What does it mean? Each bank account in Fusion is owned by a **Legal Entity** – your registered company. Granting LE access to the Cash Manager role ensures the user can create and manage accounts for that company only.

Key Fields

Field	Meaning
Security Content	The data area – set to Legal Entity to specify what data the role can access.
Security Content Value	The specific Legal Entity (e.g., ABCINC vs Legal Entity).
User Name	The employee user (e.g., JOHN_DOE).
Role	Must be the ABCe Cash Manager role you assigned.

Navigation

1. **Global Search** : Enter **Manage Data Access for Users** → **Go to Task**
2. Click **Create (+)**.
3. Populate:
 - **User Name:** JOHN_DOE
 - **Role:** [ORA] Cash Manager
 - **Security Content:** Legal Entity
 - **Security Content Value:** Choose your LE, e.g., ABCINC vs Legal Entity
4. **Save and Close.**

Note: You can repeat for multiple Legal Entities if the user manages cash for several companies.

3. Run the User & Role Synchronization (LDAP) Job

What does it mean? Oracle Fusion uses **LDAP** to sync enterprise identities and roles. After making role or data-access changes, running this job applies them immediately – so users won't face permission delays.

Key Process

- **Name:** User and Role Synchronization
- **Purpose:** Pushes role assignments and security data to the live application security model.

Navigation

1. **Global Search** : Enter **Manage Scheduled Processes** → **Go to Task**
2. In **Scheduled Processes**, click **Submit**.
3. Search for **User and Role Synchronization**.
4. **Select** and **Submit**.
5. Monitor the **Process Status** (should be **Succeeded**).

Tip: Schedule this nightly if you frequently update user roles or LE access.

Quick Recap

1. **Assign [ORA] Cash Manager** role to your user → enables cash tasks.
2. **Grant Legal Entity** access via **Manage Data Access** → ties the role to a company.
3. **Run LDAP sync** → makes your changes effective immediately.

With these steps, your users are ready to create and manage bank accounts under the correct Legal Entities – streamlining your cash management operations. 

Oracle Fusion Cash Management: Bank → Branch → Bank Account → BU Assignment

Overview In Oracle Fusion, establishing your cash management infrastructure requires four steps:

1. **Bank** – Represents the financial institution.
2. **Branch** – A specific outlet of that bank.
3. **Bank Account** – A company's actual account at that branch.
4. **Business Unit (BU) Assignment** – Grants BUs access to transact with those accounts.

Each step is controlled by roles, Legal Entity access, and system validations to ensure accurate payments, receipts, and reconciliations.

Navigation Deep Dive

Access tasks via:

- **Global Search** (): Click the magnifier icon, type the task name (e.g., “Manage Banks”), and press Enter → **Go to Task**.
- **FSM – Setup and Maintenance:**
 1. Click your **User Name** → **Settings and Actions** → **Setup and Maintenance**.

2. On FSM home, click **Tasks** → filter or search for your task.

★ **Pro Tip:** Mark high-use tasks as **Favorites** in Global Search for one-click access.

1. Create Bank

What does it mean? A **Bank** record holds the master details of a financial institution you do business with. It's a reference for all subsequent branches and accounts.

Key Fields & "What does it mean?"

Field	Definition & Example
Country	<i>Definition:</i> Jurisdiction of the bank's HQ or regulatory base. <i>Example:</i> United States.
Bank Name	<i>Definition:</i> Official institution name. <i>Example:</i> ABCINC Bank or First National Bank.

Steps

1. Go to **Manage Banks**.
2. Click **+** (**Create**).
3. Enter **Country** and **Bank Name**.
4. Click **Save and Close**.

2. Create Bank Branch

What does it mean? A **Branch** refines the Bank record to a specific location – critical for routing and local account management.

Key Fields & "What does it mean?"

Field	Definition & Example
Branch Name	<i>Definition:</i> Internal label for a physical bank outlet. <i>Example:</i> Dallas Branch.
Routing Number	<i>Definition:</i> Unique 9–10 digit code used to route electronic funds (ACH). <i>Example:</i> 110000025.
Validation	Fusion checks format/length but does not confirm real-world validity – ensure your number conforms to banking standards.

Steps

1. In **Manage Banks**, select your Bank.

2. Click **Create Branch**.
3. Fill **Branch Name & Routing Number**.
4. Click **Save and Close → Done**.
5. **Log out/in** if your Legal Entity doesn't appear in later tasks.

3. Create Bank Account

What does it mean? A **Bank Account** is a ledger-backed record that ties your company (Legal Entity) to a branch—used for AP, AR, and cash reporting.

Key Fields & “What does it mean?”

Field	Definition & Example
Bank Branch	<i>Definition:</i> Your chosen branch (e.g., Dallas Branch).
Account Name	<i>Definition:</i> Descriptive label for internal clarity. <i>Example:</i> ABCINC Dallas Corp Account.
Account Use	<i>Definition:</i> Flags AP (vendor payments) and AR (customer receipts). <i>Example:</i> ☒ Payables , ☒ Receivables .
Account Number	<i>Definition:</i> Your bank-issued account digits. <i>Example:</i> 1234567890.
Currency	<i>Definition:</i> Operating currency for this account. <i>Example:</i> USD - US Dollar.
Legal Entity Name	<i>Definition:</i> Company owning this account. <i>Example:</i> ABCINC US Legal Entity.
GL Accounts	<i>Definition:</i> Chart of Accounts segments for posting: • Cash (asset ledger) • Cash Clearing (interim) • Reconciliation Differences (rounding variances).

 **Role Check:** If **Legal Entity** doesn't appear, ensure the user has [ORA] Cash Manager role + LE access and run the **User & Role Synchronization** job.

Steps

1. Go to **Manage Bank Accounts**.
2. Click **Create (+)**.
3. Select **Bank Branch**, fill **Account Name**, **Use**, **Number**, **Currency**, **LE**, **GL Accounts**.
4. Click **Save and Close**.

4. Define Payment Documents

What does it mean? Payment Documents configure check stock and print templates, enabling checks or remittance advices to print correctly.

Key Fields & “What does it mean?”

Field	Definition & Example
Payment Document Name	<i>Definition:</i> Identifier for your check layout. <i>Example:</i> ABCINC Check.
Paper Stock Type	<i>Definition:</i> Preprinted (Numbered Stock) vs. blank (you print everything).
Format	<i>Definition:</i> Print template including MICR line positions, font, margins.
First/Last Doc Number	<i>Definition:</i> Range of check numbers available. <i>Example:</i> 1001-2000.

Steps

1. Go to **Manage Payment Documents**.
2. Click **Create (+)**.
3. Enter **Name, Paper Stock Type, Format, First/Last Numbers**.
4. Click **OK**.

5. Assign Bank Account to Business Unit

What does it mean? BU Assignment links a Bank Account to specific BUs – allowing those units to issue payments and receive receipts against that account.

Key Fields & “What does it mean?”

Field	Definition & Example
Business Unit	<i>Definition:</i> The BU authorized to transact on this account. <i>Example:</i> ABCINC US Business Unit.
Cash Account Code Comb.	<i>Definition:</i> COA segment values for Cash postings. <i>Example:</i> 1000-1000-11010.
Cash Clearing Code Comb.	<i>Definition:</i> Segment values for clearing postings. <i>Example:</i> 1000-1000-11015.

🔑 **Note:** One Bank Account can serve **multiple BUs** under the ABCe LE. To assign another BU, grant your user Cash Manager + LE access for that BU, then repeat.

Steps

1. Open your **Bank Account** record → **Business Unit Access** tab.
2. Click **Create (+)**.
3. Select **Business Unit**, verify **Cash & Cash Clearing** code combinations.
4. Click **Save and Close**.

Key Takeaways 🔑

- **Bank** → Master financial institution record.
- **Branch** → Specific location with a valid routing number format.
- **Bank Account** → Company's account linked to a branch & LE; requires Cash Manager role.
- **Payment Documents** → Check stock and print templates.
- **BU Assignment** → Grants BUs the right to transact on the account, mapping to COA segments.

Follow these detailed steps – with clear definitions and role checks – to implement robust cash management in your Oracle Fusion environment! 🚀

18. Create Payment Process Profile (PPP)

Create Payment Process Profile (PPP)

Overview

A **Payment Process Profile (PPP)** is **mandatory** for any payment in Oracle Fusion. It defines the **rules** and **criteria**—such as which bank accounts, currencies, BUs, and payment methods are used, plus file formats and approval controls—to ensure payments align with your company's policies.

Navigation

1. **Global Search** : Type **Manage Payment Process Profiles** → **Go to Task**
2. **FSM (Setup & Maintenance)**:
 - Click your **User Name** → **Settings and Actions** → **Setup and Maintenance**
 - On FSM home, click **Tasks** → **Search** → enter **Payment Process Profiles**

1. What does it mean?

A **Payment Process Profile** bundles all the configuration settings needed to process supplier payments—whether by check, EFT, wire transfer, or other methods—into a reusable profile.

2. Key Fields & “What does it mean?”

Field	What does it mean?
Name	Logical label for this profile (e.g., ABCINC Payment Process Profile).
Code	Unique identifier (e.g., ABCINCPCP).
Payment File Format	Template for printing checks or generating electronic payment files (e.g., Standard Check Format).
Processing Type	Mode of payment output: Printed (physical checks) or Electronic (EFT/Wire).

3. Usage Rules

Define which combinations of the following are allowed in this profile:

- **Payment Methods**: Check, EFT, Wire Transfer, Digital Wallet, etc.
- **Disbursement Bank Accounts**: Single or multiple accounts.
- **Business Units**: Restrict to one BU or allow multiple BUs.
- **Currencies**: Single currency (e.g., USD) or multiple currencies.

Example:

- **EFT Profile:** Allows only electronic transfers, USD & EUR, from Bank A.
- **Check Profile:** Printed checks in USD, printed on pre-numbered stock.
- **Wire Profile:** International wire transfers, auto-apply FX rules.

4. Steps to Create PPP

1. **Open Manage Payment Process Profiles** (via Global Search or FSM).
2. Click **Create (+)**.
3. Enter:
 - **Name:** ABCINC Payment Process Profile
 - **Code:** ABCINCPCP
 - **Payment File Format:** Standard Check Format
 - **Processing Type:** Printed
4. Click **Save and Close**.

5. Example Scenarios

1. **EFT Payments Profile**
 - **Processing Type:** Electronic
 - **Currency:** USD, EUR
 - **Bank Account:** Bank A (EFT-capable)
 - **File Format:** NACHA
2. **Check Payments Profile**
 - **Processing Type:** Printed
 - **Currency:** USD
 - **Bank Account:** Bank B (check stock)
 - **File Format:** Standard Check Format
3. **Wire Transfers Profile**
 - **Processing Type:** Electronic
 - **Currency:** Any
 - **Bank Account:** International Account
 - **Approval Rule:** Two-step approval before file generation

6. Benefits of PPP 🚀

- **Automation:** Reduces manual setup per payment run.
- **Consistency:** Enforces standardized formats and approval rules.
- **Control:** Limits payment methods, BUs, currencies, and accounts.
- **Compliance:** Ensures payments follow legal and internal policies.
- **Flexibility:** Multiple profiles for different payment channels.

Shyam Kumar

19. Assign AP Roles to User

20. Assign Business Unit to AP Roles

21. Run LDAP Job

22. Open AP Periods

Oracle Fusion Payables: Roles, BU Access, LDAP Sync & AP Periods

Overview To enable users for Accounts Payable tasks (invoice creation, payments) and ensure proper period control, complete these four steps:

1. Assign AP Roles to the user
2. Grant Business Unit (BU) access to those roles
3. Run the User & Role Synchronization (LDAP) job
4. Open AP periods on the Primary Ledger

Follow the detailed definitions, “What does it mean?” callouts, navigation paths, and examples below.

Navigation

You can reach any setup via:

- **Global Search (🔍):** Click the magnifier, type the task name (e.g., “Manage Users”), press Enter → **Go to Task**
- **FSM – Setup and Maintenance:**
 1. Click **Your Name** → **Settings and Actions** → **Setup and Maintenance**
 2. On the FSM homepage, click **Tasks** → filter or search for your task

★ *Pro Tip:* Mark frequently used tasks as **Favorites (★)** in Global Search for one-click access.

1. What does it mean? Assign AP Roles to User

Definition: AP Roles grant menu access and permissions to create/manage supplier invoices and payments. Without AP roles, “Payables” won’t appear in the Navigator.

Seeded AP Roles

- **Accounts Payable Manager**
- **Accounts Payable Supervisor**
- **Accounts Payable Specialist**

Role	Typical Duties
Manager	Full setup/configuration & approvals
Supervisor	Daily oversight, exception handling
Specialist	Invoice entry, supplier account maintenance

Steps

1. **Global Search**  → **Manage Users** → **Go to Task**
2. Find the user (e.g., JOHN_DOE) → click **Edit**
3. Under **Job Roles**, click **Add Role**
4. Select each AP role needed → **Done** → **Save**

Example: Assign Accounts Payable Specialist to JANE_SMITH so she can enter supplier invoices.

2. What does it mean? Assign BU to AP Roles

Definition: Business Unit access ties your AP roles to specific organizational units. It controls which BU's invoices and payments the user can handle.

Key Fields

Field	Meaning
User Name	Employee ID (e.g., JANE_SMITH)
Role	AP role just assigned (e.g., Accounts Payable Manager)
Security Content	Always set to Business Unit
Security Content Value	Specific BU (e.g., ABCINC US Business Unit)

Why assign BU here?

The BU you grant determines which BU's expenses, POs, and payables the user sees. At employee creation, a BU lets them create expense reports; here, it unlocks Payables for that BU.

Steps

1. **Global Search**  → **Manage Data Access for Users** → **Go to Task**
2. Click **Create (+)**
3. Populate:

- **User Name** = JANE_SMITH
- **Role** = Accounts Payable Specialist
- **Security Content** = Business Unit
- **Security Content Value** = ABCINC US Business Unit

4. Save and Close

3. What does it mean? Run LDAP Sync Job

Definition: Oracle Fusion uses LDAP to synchronize user-role and data-access assignments to the application security model. Running this job applies changes immediately.

Navigation & Steps

1. **Global Search**  → **Manage Scheduled Processes** → **Go to Task**
2. Click **Submit** → search **User and Role Synchronization** → **Submit**
3. Monitor under **Scheduled Processes** until **Status = Succeeded**

Tip: For frequent role changes, schedule this job to run nightly.

4. What does it mean? Open AP Periods

Definition: AP periods are time windows (usually monthly) under which you can post supplier invoices and payments. They're tied to the **Primary Ledger (PL)**, not individual BUs.

Key Points

- A single PL can feed multiple BUs (e.g., 10 BUs share one PL).
- Opening a period on the PL simultaneously opens it for all associated BUs.
- You **cannot** open periods BU-by-BU if they share the ABCe PL.

Navigation & Steps

1. **Navigator** → **Payables** → **Invoices** → **Invoice Workbench**
2. Click **Task List** → **Manage Accounting Periods**
3. Select your **Primary Ledger** (e.g., ABCINC US Primary Ledger)
4. Click **Open Period** next to the desired period (e.g., **Jan-25**)
5. **Save and Close**

Example: Opening **Feb-25** once opens it for all BUs under ABCINC US Primary Ledger.

Quick Recap 

1. **Assign AP Roles** → unlocks Payables in the Navigator
2. **Grant BU Access** → restricts roles to specific Business Units
3. **Run LDAP Sync** → applies all changes immediately
4. **Open AP Periods** → activates Payables posting windows at the Primary Ledger level
