ORACLE SCM TRACK

Procurement Setup and Configuration

1. Assign Business Unit Business Functions:

Setup Path:

Home Page > Setup and Maintenance > Procurement > Organization Structures > Assign Business Unit Business Functions > Fill Data > Save and Close

Make sure you select the correct Business Unit (BU) where you want to work on Procurement, Enable Procurement and Requisition (and any other required functions) for that BU.

The screenshot shows the Oracle Procurement Setup and Configuration interface. The top navigation bar includes the Oracle logo, a search icon, and a user profile icon. The 'Setup: Procurement' dropdown is highlighted in the top navigation bar. Below the navigation bar, the 'Functional Areas' list on the left includes 'Initial Users', 'Enterprise Profile', 'Legal Structures', 'Financial Reporting Structures', 'Organization Structures' (highlighted with a red box), 'Workforce Structures', 'Users and Security', 'Purchasing Categories', 'Suppliers', 'Approval Management', 'Procurement Foundation', and 'Items'. The 'Organization Structures' task list on the right includes 'Manage Business Unit', 'Assign Business Unit Business Function' (highlighted with a red box), 'Manage Facility Shifts', 'Manage Facility Workday Patterns', 'Manage Facility Schedules', 'Manage Inventory Organizations', and 'Manage Item Organizations'. The 'Assign Business Unit Business Function' task is highlighted with a yellow background.

Assign Business Functions: MA BU

2. Manage Common Options for Payables and Procurement:

Setup Path:

Home Page > Setup and Maintenance > Financials > Payables > Manage Common Options for Payables and Procurement > Select BU > Fill Data > Save and Close

This option is common between **Procurement and Payables**. Normally, the **financial team** is responsible for it, because it involves account numbers. But we can set it up now so our work continues smoothly.

Each **Business Unit (BU)** in the company can have its own option. That's why I need to be sure which BU I'm working on.

The account numbers are also different for each company, and every account number is used for a specific purpose. I'll explain these below.

Additional Information

Regional Information ⓘ

- **Liability:** This is the company's account that shows how much the company owes to the supplier.
- **Prepayment:** This is the company's account used for advance payments made to the supplier.
- **Conversion Rate Gain:** The account used when there's a foreign exchange difference in favor of the company, for example if the currency rate changes between the time the PO was created and now.

- **Conversion Rate Loss:** The account used when there's a foreign exchange difference against the company, for example if the rate change causes a loss, **In most cases**, both gain and loss are posted to the same account.
- **Discount:** The company's account that records any discount applied to invoices.
- **Retainage:** The account used in special cases like contracting. The full contractor amount is recorded here, but payments are released in parts as the contractor finishes specific milestones, according to agreement.
- **Expense:** The company's account for recording expenses.
- **Conversion Rate Type:** Defines the source of the conversion rate. This is controlled by Finance, because there are multiple methods. We usually select Corporate, which means it follows the company's chosen exchange rate.
- **Realized Gain Distribution:** The actual foreign exchange gain that happens at the time of payment or collection (when the company benefits).
- **Realized Loss Distribution:** The actual foreign exchange loss that happens at the time of payment or collection (when the company loses).

Important Note:

The difference between Conversion Rate Gain/Loss and Realized Gain/Loss is:

- **Conversion Rate Gain/Loss** → exchange rate difference based on the rate you entered or adjusted at transaction time (invoice/payment), even if you haven't paid yet.
- **Realized Gain/Loss** → exchange rate difference that happens when you actually pay or receive money.
- **Accrue Expense Items:** This defines when the system recognizes that the supplier is owed money. Two options:

- At Receipt: As soon as goods are received.
- Period End: At the end of the accounting period (e.g. end of month).

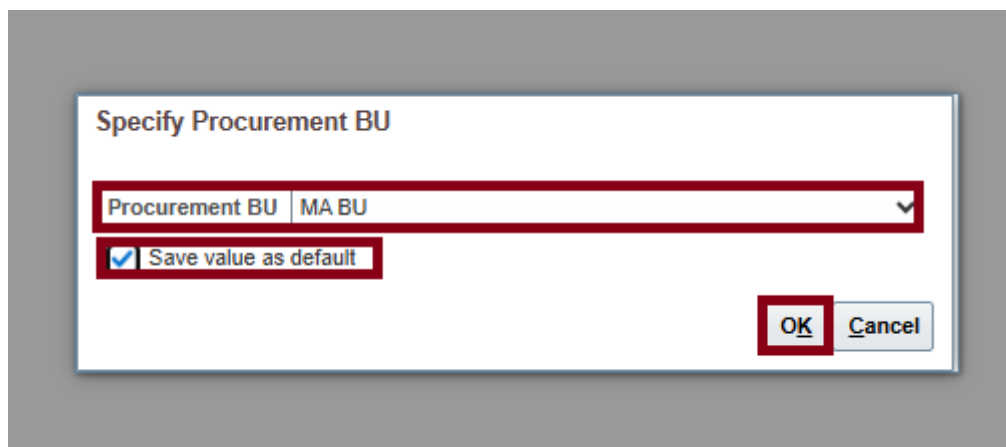

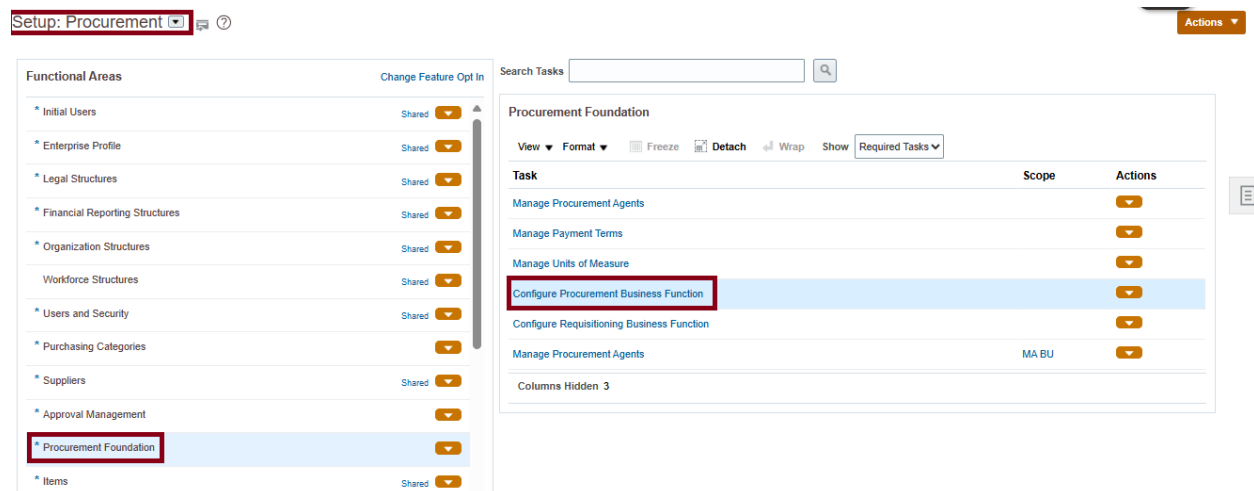

These are all the account numbers needed to continue the setup.

3. Configure Procurement Business Function :

Here, we are configuring how the **Business Unit** will operate in **Procurement**.

General:

- **Payment Terms:** The default payment method for the BU. You can still change it when creating a PO.
- **Shipping Method:** The default shipping method agreed with the supplier. It can also be changed depending on the item type or delivery location.

- **Price Break Type:** Used in agreements, for example if there's a blanket agreement that says: for every 100 items ordered, there's a 1% discount.
 - **Cumulative:** The discount is based on the total across multiple POs. For example, if the first order was 40 items and the second order was 70 items, the 1% discount applies because the total is now over 100.
 - **Noncumulative:** Each order is calculated separately. The discount only applies if a single PO reaches 100 items.
- **Buyer:** You can set a default buyer for the BU.
- **Inventory Organization:** Set to the Item Master so it can see all items in the organization.
- **Line Type:** Default type on the PO line – for example, Goods or Service.
- **Currency:** The default currency for the PO.
- **Prospective Supplier Registration URL:** Sent to potential suppliers (not yet approved) so they can register their details. After registration, the process goes through the approval cycle.
- **Spend Authorized Supplier Registration URL:** Sent to approved suppliers who are already authorized to work with the company. After registration, this also goes through the approval cycle.

Purchasing:

- **Maximum File Size (MB):** The maximum size for a PO file including attachments. It's recommended to keep it reasonable to avoid technical issues when sending POs to suppliers.
- **Receipt Close Tolerance (%):** When receiving goods, sometimes the supplier delivers more than ordered. This defines how much extra can be accepted.
- **Receipt Close Point:** Defines when the system closes the receiving process. Options:

1. **Received:** Once the ordered quantity is received, the system blocks further receiving.
 2. **Accepted:** Once the inspection is done and approved for the required quantity. For example, if only half the items are accepted, the system allows receiving until the full quantity is accepted.
 3. **Delivered:** After receiving, inspection, approval, and putting away in inventory, the system closes receiving.
- **Match Approval Level:** When the accountant creates an invoice for the supplier, the system performs matching of the ordered quantities on the PO based on the following options:
 1. **2-way:** Compares the invoice with the PO.
 2. **3-way:** Compares the invoice with the PO and the receipt of goods.
 3. **4-way:** Compares the invoice with the PO, the receipt of goods, and the accepted quantities.

***Other checkboxes can be enabled depending on business needs.**

4. Configure Requisitioning Business Function :

Here, we are configuring how the **Business Unit (BU)** will operate in **Requisitioning**.

Setup Path:

Requisitioning:

- **Default Deliver to Organization:** This is the organization that will appear as default on the PR (Purchase Requisition). It can still be changed if needed.
- **Allow One Time Addresses:** Allows you to enter a custom address manually, other than the ones already defined in the system.

Purchasing:

- **Price Change Tolerance Percentage:** The allowed percentage difference in price between the PR and the PO.
- **Price Change Tolerance Amount:** The allowed amount difference in price between the PR and the PO.
- **Ship to Location:** The default location where the goods will be shipped. It can also be changed when required.

***Other checkboxes can be enabled depending on business needs.**
